Perhaps.
>
>Face it, he is good at it.

Not really. I have seen many other posters get the better of Mr. Anderson. It's
not hard to do at all.

All I've done is present a differing opinion than his, and point out some of
his mistakes. His responses have been - predictable.

It's fascinating how a few words of a different opinion can cause Mr. Anderson to produce volumes of verbiage. And how a calm, polite correction of even one of his errors brings such a torrent of anger and abuse.

>It may not be what you are in here for, but
>he succeeds in his game.

Sometimes.
>

>some hams in his locale. That is just really wierd stuff.

Just different versions of the same game. And the "game" sometimes extends beyond the newsgroup. For example, some time back I and some others received several unsolicited emails from Mr. Anderson, with attachments that were allegedly pictures. I deleted them unopened, as is standard procedure for unsolicited attachments. I found out later they were supposedly a picture of his commercial radiotelephone license and a picture that included adult male nudity. Of course this is second hand information because I simply deleted the emails, but you have to kinda wonder why such Mr. Anderson would send me such things.

>;-)

Speculate away, Rev. Jim, in the most "civil" negative connotations your lil imagination thunk up...:-)

Speculate until all you see are speckles...

Of course we can all speculate on Mr. Miccolis' reasons (to sound off like some latter-day "T.O.M.") when that ARRL president-for-life ceased mortal existance long before Rev. Jim got is first Good Book (ARRL Handbook, that is).

>>With the different personalities involved, the games can get pretty

Tsk, tsk, tsk...your Python was gored and you think everyone else's was, too? :-)

>All I've done is present a differing opinion than his, and point out some of
>his mistakes. His responses have been - predictable.

BS, Rev. Jim. You've got a bad habit of trying to convince others
that you "know" things you can't verify. Tsk, tsk, tsk.

>It's fascinating how a few words of a different opinion can cause Mr. Anderson
>to produce volumes of verbiage. And how a calm, polite correction of even one

"Torrent of anger and abuse?!?!?" :-)

Poor baby. Wanting to be the hall monitor in here, ey?

Jimmah, da Google is NOT your friend in this case. :-)

>>It may not be what you are in here for, but
>>he succeeds in his game.
>
>Sometimes.

More times than not. I'm still here... :-)

>>Note this does not apply to the strange fringe postings that appear to

>things.

Oh, dear. Isn't the nasty old Reverend getting out of hand with his
preachy moralizing? :-)

"Male nudity!" :-)

By accident, a JPG of an aerial photo of a converted B-26 with one of
the crew mooning the photo plane in the nose is considered "male
nudity!!!"

Several of the folks who are in here thought it was FUNNY.

But, the rigid moral majority, more self-righteous than mental
viagra overdosing, say it is "male nudity!!!" Good grief.
Grow up. Get a new fig leaf to cover your anguish...

If you had bothered to Google (your constant source of diss-material)
you would have found out the sequence of events was totally in public
in this venue.

By the way, I DID send the correct attachment which was, indeed, a
scan of my FIRST First Class Radiotelephone (Commercial) license.
I've had several of those licenses, all the way to the change-over to
the General Radiotelephone Operator license class.

>>>>You
>>>>(or anyone here) know what will happen when you rise to the bait, you

>>
>> And yet you are now involved once more!
>
>Only by choice.

Yes, "Mr. Miccolis" wants to keep on beating dead horses until they
die all over again to prove his point that He was "correct," and all
must accept that lest they get caught in an endless loop of Rev. Jim
preaching his self-righteousness. "Mr. Miccolis" can do no wrong,
ever, and he is compelled to repeat old arguments forever and ever
to demonstrate that.

"Mr. Miccolis" will try to repeat many ancient arguments, discussions,
et al, long after they quit being topics. Why? Apparently "Mr. Miccolis"
can't let sleeping dogs lie nor can he let beaten horses die, either.

It's sort of like watching re-runs of "Wheel of Fortune" (or any other quiz
show on TV) and hoping a guest will come up with a different answer! :-)

Tsk, tsk, tsk...such sore losers! :-)

I must not be getting my point across here. This isn't about being
right. It's about the discourse. Sometimes he's right, sometimes he's
wrong, and a lot of it is just neutral as in opinion.

> It's fascinating how a few words of a different opinion can cause Mr. Anderson

Oh, that other one is some pretty severe stuff. Between the perverse
accusations, the threats, the obscenities and the stuff that just might
end up as courtroom evidence, this stuff is tame by comparison.

And the "game" sometimes extends

| > > despite the kvetching, an experienced operator can pick out the
| > > different phonetics without getting his/her knickers in a twist.

Let me straighten out the whole phonetics discussion from the point of the DX side:

1. Standart ITU Phonetics are testet everywhere outside most english speaking countries, even in Great Britain as we where told by Alun. Thats neccesary because they all have their alternative set of phonetics in native language. If a US-ham now is useing a different set, there could be problems of understanding, because the properly pronounced ITU phonetics might be the ONLY english words, and the figures, the DX will be capable of.

2. As we are tested on the ITU-phonetics for ham-licence, in other instances (law enforcement, emergency response, military) we are bound to homeland phonetics. Despite that fact, hams are using the ITU-set even on VHF/UHF and even they dont have a CEPT licence (only national) instead of the logical native language one.

3. The use of alternative sets of phonetics, or even those funny replacements as they are in use in the US, like
"W4ZLY " Whisky for Zebras Like Yoghurt - sometimes would make it hard to accomplish a full QSO. BTW this is a real example.

Opinion is opinion.

Problem is, too many amateurs are totally inflexible and any
deviation, however slight, from established Newington
instructions is considered "perverse." :-)

Not quite. There's an obsessive-compulsive disorder going on
there and he can't help jumping back in. Wait. Once time is
available, he will bring out the putz can and start polishing
some more insults. :-)

In order for PRESENT DAY MARS to continue to fulfil it's federal mission,
it is DEPENDANT upon volunteer civilian licensees of the Amatuer Radio Service.

Otherwise some nicely packaged editorializing by someone who is not active
in the program and has no practical experience on the subject he's
pontificating about.

> 51 years ago I lucked out in my military service...(SNIP)

Here we go again...."Back at ADA......"

> (UNSNIP)...and got stationed at
> a major communications facility. That changed my concepts of what
> radio communications was about.

No...that CEMENTED what your concepts of what radio communication was
about.

Very little in what you post here deviates from what you say you experienced in the 50's, yet YOU take every opportunity to denigrate any Amateur who has the temerity to suggest discussing ANYthing that happened more than a week ago as "traditionalist-fundamentalist".

> The regulars in this venue don't want to hear of that. It wasn't
> about "amateur radio" and it hasn't been publicized in QST.

Well golly gee whiz, Your Putziness...Ya think it might be due to the fact that (a) it happened over FIVE decades ago, and (B) has NOTHING to do with AMATEUR RADIO...?!?!aphy.

> Back to trying to find out what's holding me down in my search for
> anti-gravity...

It could be the lead in your....head.

Putz..

What isn't neutral is the undeserved abuse dealt out to others for
simply disagreeing or pointing out mistakes. But see below about the
"game".

> > Just different versions of the same game.

The game you describe is simple attention-getting behavior. It's
exactly the same as the small child who tries all sorts of behaviors
in order to get adult (typically parental) attention. That the
attention takes the form of punishments doesn't matter to the child as
much as the attention itself.

A variation is to get the adult/parent to lose control, start
screaming and yelling, etc., as a way of getting the child and adult
on the same behavioral level.

Much if not most of what Len does with his newsgroup postings here is
exactly the same thing.

You may think he is "good at it" but the reverse is true. Compare how
much response he gets for the amount of posting he does. Or if you
want to be specific, note how many of my posts elicit a response from
him, and how many of his posts elicit a response from me. Note also
the length, content and tone of the responses.

"Good at it"? Not at all.

It wasn't meant as a pun, Mike. He's being insulting. Again.

Not to mention that the paragraph you cited was yet another utterance of ignorance, in particularly the part about ".....(radio) hobbyists are quite unaware of what goes on in other radio services.".

He couldn't be MORE wrong....Well...Yes, he could, but it's hard to tell with him.

I like the part about "Amateur radio publications seldom mention other radio services in the USA".

First of all, they do. Regularly. Therefore Lennie's busted lying again. (I know...he makes a joke out being labelled a liar, but hey, if the shoe fits....)

Secondly, there are several "radio hobbyist" magazines available in the US, espcially "Popular Communications" and "Monitoring Times" that cover the "SWL" and scanning disciplines. If someone is interested in "other radio services", then they can go to those other sources.

Lastly, why would an Amateur Radio-specific publication spend an inordinate amount of time on "other" radio services? Where does this idiot (and I am being a bit liberal with praise there...) get the idea that an AMATEUR RADIO publication should discuss issues pertaining to Public Service, Common Carrier or military services when the topic does not correspondingly and directly affect Amateur Radio...?!?!

One has to wonder what Lennie could have REALLY amounted to if he'd been issued some grade-school level common sense.

No...MARS can and does function by itself. It is controlled by the
military and therefore run by the military using government
radio equipment. Getting civilians involved is only part of the task.

MARS has never involved "amatuer radio," only amateur radio.

For information on Army MARS, see the Fort Huachuca website
and follow the links there. While Huachuca is the Military
Intelligence School Hq, Army MARS is headquartered there off

to one side.

> Otherwise some nicely packaged editorializing by someone who is not
active
>in the program and has no practical experience on the subject he's

Now, now. I've been to Huachuca. :-)

I've controlled MARS transmissions. :-)

>> 51 years ago I lucked out in my military service...(SNIP)
>
> Here we go again...."Back at ADA......"

It could have been AGA (San Francisco) or AHA (Hawaii)
or Seattle or Manila or Okinawa or even Anchorage. :-)

What isn't realized is that the U.S. military did NOT
depend on fixed-point communications via manual
telegraphy, only teleprinter telegraphy (TTY on landline
or RTTY by radio). Did NOT depend as far back as a
half century ago. They don't even today.

>> (UNSNIP)...and got stationed at
>> a major communications facility. That changed my concepts of what
>> radio communications was about.
>
> No...that CEMENTED what your concepts of what radio communication was
>about.

Nursie did not exist a half century ago. He isn't in any way,
shape, or form able to conceptualize much of anything of
that time unless spoon-fed the information from some ARRL
publication.

Nursie should stop trying to dictate what others said long ago
or experienced long ago...or even what they say they thought
long ago...when nursie didn't exist. :-)

> Very little in what you post here deviates from what you say you
>experienced in the 50's, yet YOU take every opportunity to denigrate any

>more than a week ago as "traditionalist-fundamentalist".

Nope. Only very specific amateurs. Principally those which
hang out in here trying to make noises like they are special
representatives from Newington. :-)

If anyone keeps harping on obeyance-adherence to the
standards and practices of the 1930s in amateuism of the
2000s, then they automatically join the "traditionalist-
fundamentalist" club. If anyone uses manual telegraphy
skill testing as a requirement for use of amateur HF bands

then they are automatically in the "traditionalist-fundamentalist"
club. Time can't be frozen but those club members all want to
freeze out anyone not thinking as they do.

>> The regulars in this venue don't want to hear of that. It wasn't
>> about "amateur radio" and it hasn't been publicized in QST.
>
> Well golly gee whiz, Your Putziness...Ya think it might be due to the fact
>that (a) it happened over FIVE decades ago, and (B) has NOTHING to do with
>AMATEUR RADIO...?!?!aphy.

Poor nursie. Never did any big-time radio communications in
his military days...resents anyone who did.

Poor nursie...never did any radio-electronics engineering and
resents anyone who did.

Poor nursie...never could take an opposite opinion to his in
here and is bitterly resentful to anyone who had spoken out
in opposition to him.

ACAN (Army Command-Administration Network) of the late
1940s through all of the 1950s and into some of the 1960s
was worldwide on HF at 14 major communications centers
from Karlsruhe to Asmara to Taiwan to Tokyo to the Canal
Zone. The Signal Corps had plenty of royalty-free, non-
copyrighted pictures and information available to anyone who
cared to publish them. [by law, the U.S. government cannot
copyright its own works] Even though the USAF was given
responsibility of operation of the entire ADA station facilities
in 1963, it never ceased its 24/7 communications function
until the final 1978 U.S. military transmission from Camp
Tomlinson. Nothing of that was ever printed in U.S. amateur
radio publications.

The Army, again, was heavy into communications work in
Vietnam from 1962 on through 1970 as explained at the Army
Center for Military History on signal efforts in southeast Asia.
New concepts were introduced there, the first military satellite
relay operations began there, and troposcatter multi-channel
radio was put to the test in a war zone. I don't recall anything
of that effort published even as general interest items in any
U.S. amateur radio publication.

Is there ever any mention in U.S. amateur publications of the
U.S. government's own involvement in HF radio, through
SHARES? I don't think so. FEMA gets a passing mention
although FEMA is a small part of the whole of SHARES.
SHARES takes in MARS as a member. For an example of
the MARS-SHARES operation, read the Army Communicator
for operation Grecian Firebolt 2002 held over a four-week
period. Grecian Firebolt 2002 didn't involve civilian radio

amateurs of MARS.

Tsk, tsk, tsk...poor nursie wants to concentrate solely on
amateur RADIO as if it works by different physical principles
than other radio of other radio services. It doesn't. The
examples useful to amateur radio are neglected in the amateur
press, therefore nursie doesn't want to know anything except
what is spoon-fed him through hum radio magazines.

>> Back to trying to find out what's holding me down in my search for
>> anti-gravity...
>
> It could be the lead in your....head.

Poor nursie...bitter and resentful to the last. I'll bet nursie loves
to heckle entertainers from the audience while they are trying
to entertain an audience. :-)

Nursie can't lighten up. Always has to make fun of others. Not
a good mental health sign.

> Putz..

Well, back to nursie's name-calling again. "Meaningful discourse"
in the only way nursie can get along...dissing and cursing those
who won't agree with him.

Must be the "new" 'inherent good will of radio amateurs'...

Poor nursie...can't even take some simple word-play.

Note "dielectic materialism" v. "dielectric materialism."

See "dialectic" as "a logical test of ideas for validity" versus "dialectric" which is a fancy word for "insulator." :-)

Tsk, tsk...some are strung so tight that they are "insulated" from a little levity. :-)

> Not to mention that the paragraph you cited was yet another utterance of
>ignorance, in particularly the part about ".....(radio) hobbyists are quite

>with him.
>
> I like the part about "Amateur radio publications seldom mention other
>radio services in the USA".
>
> First of all, they do. Regularly.

Oh? Where? When? :-)

Was the SINCGARS family of radios ever mentioned? A quarter million
of those radios have been produced since 1989 and are in standard
small-unit communications use of the U.S. military today. Made by
ITT, Fort Wayne, IN.

Has the PRC-104 HF manpack radio ever been mentioned? Dates back
before 1986, still in use today. The R/T module is standard in a variety
of ground radios, from the manpack through vehicular to the fixed-site
systems. Made by Hughes Ground Systems. Neat little antenna
tuner module in the manpack version...uses the same Bruene detector
first used on the USMC-contract T-195 HF transmitter back in 1955.

Has the AN/FRC-93 ever been mentioned? It should. Amateurs know
it as the ham version of the Collins KWM2. :-) Trouble is, the FRC-93
is the military-labeled version of the COMMERCIAL KWM2 which is
supplied with a quartz crystal pack covering much more than ham bands.

Ham publications have strummed HAARP and mentioned only the ham
involvement in MARS...and lots of ancient stuff of old radio stations
before most everyone's time. Just nothing in the last two decades.

>Therefore Lennie's busted lying again.

Tsk, tsk, tsk. Nursie getting all red in the face with rage again and
can't pull out any information from all those "secret" military radios
"he can't talk about." :-)

> Secondly, there are several "radio hobbyist" magazines available in the
>US, espcially "Popular Communications" and "Monitoring Times" that cover the
>"SWL" and scanning disciplines. If someone is interested in "other radio
>services", then they can go to those other sources.

Won't be much there, either. :-)

There's much more on the Internet, especially the military collector
sites...but those are about as behind the times as the boatanchor
and surplus sites.

Or, anyone that is interested in what is done today in the military
(or of two decades back) can just ask anyone in the defense
electronics industry. Very little of the "radios" built for the U.S.
military or government are classified or "sensitive" (for security
reasons, not receiver sensitivity).

> Lastly, why would an Amateur Radio-specific publication spend an
>inordinate amount of time on "other" radio services?

"Inordinate?!?" No one was asking for "inordinate." Even a minor
mention might draw some interest...except for those who wish to
remain insular, isolated from having to learn anything but the latest
DX contest scores. :-)

>Where does this idiot
>(and I am being a bit liberal with praise there...) get the idea that an
>AMATEUR RADIO publication should discuss issues pertaining to Public Service,

>Common Carrier or military services when the topic does not correspondingly
>and directly affect Amateur Radio...?!?!

Must be more of this "meaningful discourse" again. :-)

The "A" in APCO does NOT refer to Amateur.

The "A" in SHARES does NOT refer to Amateur.

The "A" in MARS does NOT refer to Amateur.

Nursie needs to know his "A" from a hole in the ground. :-)

> One has to wonder what Lennie could have REALLY amounted to if he'd been
>issued some grade-school level common sense.

Tsk, tsk, tsk. "Meaningful discourse?"

Poor nursie. Still resentful that someone took the time and trouble
to educate himself and keep working in radio-electronics in the
aerospace industry as a design engineer in radio-electronics and
then retire with a comfortable income. :-)

Sucks to be nursie? :-)

In article <40C269B3.9080803@ix.netcom.com>, Robert Casey
<wa2ise@ix.netcom.com> writes:

>Never quite understood it, but it used to be that a callsign belonged to
>the "station" and
>not the operator, or something like that.

Yep. That derives from the fact that in most other radio services, the station and the operator are/were completely independent licenses.

For example, consider maritime radio. A typical ship station has aseveral operators, but the ship's callsign stays with the ship. The operators, OTOH, change with the watch and from voyage to voyage. Same for broadcasting and many other services.

Amateur radio is almost unique in that it is a licensed service where, in the vast majority of cases, the station owner, engineer, operator and license holder are all the same person.

>Once it happened many years
>ago that two
>brothers got licenses but the FCC gave out only one callsign, as they
>used the same
>"station".

That must have been before WW2. Maybe even before the FCC, because there have long been OM/XYL and other ham family setups where everyone had their own callsign even though there was only one station.

>The FCC recently decided to change that theory to one that
>more closely
>matches the way hams think of their callsigns. That a ham "owns" a
>callsign and uses
>it on whatever ham equipment he happens to be using at the moment. If I
>borrow your
>ham shack, I would still use my callsign. Once I'm satisfied that your
>equipment works
>correctly. "Looks like a kenwood TS440SAT, receives like one, and seems
>to transmit
>like it should."

There was a time when using your callsign/portable at my station was not allowed by the rules. In fact, if you go back far enough, there was a time when mobile and portable operations by hams were not allowed by the rules.

It also used to be possible to get additional station licenses so you didn't have to sign portable or send in postcards. A typical situation would be one

where a ham had a vacation home where hamming would take place. Of course some hams used this provision to hang onto callsigns they didn't want to give up when moving out of a call district.

Portable operation was allowed first (early 1930s) but for a few years you needed a second station license with a special callsign. Oddly enough, mobile (land vehicle) operation came later - even after aeronauticla mobile operation by hams was allowed. US hams were not allowed to use mobile on the ham bands below 25 MHz until 1949.

Didn't want to disappoint!

>I think CW is generally slower, though.

All depends on what's being done. With a clear channel and fast talkers, it
takes skilled CW/Morse operators to keep up with 'phone. OTOH, when actual
record "write it down" messages are being handled, the speed limit is often how
fast the receiving op can write legibly. Most people who don't know some form
of shorthand run out of steam at 20 to 40 wpm. Of course typing can be much
faster.

Under those conditions, CW/Morse is often *faster* and *more accurate* than
voice - if skilled operators are available.

MARS is dependent upon Amateurs to do the bulk of it's traffic.

It was true during Viet Nam, it's true today.

> MARS has never involved "amatuer radio," only amateur radio.

Again your only defensible argument is that I transposed two letters.

> For information on Army MARS, see the Fort Huachuca website
> and follow the links there. While Huachuca is the Military
> Intelligence School Hq, Army MARS is headquartered there off
> to one side.

I know you'll find this hard to believe, but life exists beyond websites.

>>about.
>
> Nursie did not exist a half century ago. He isn't in any way,
> shape, or form able to conceptualize much of anything of
> that time unless spoon-fed the information from some ARRL
> publication.

Regardless of my birthdate, your rhetoric and spamming of the NG exists
TODAY, and it is rife with your tales of what you did five decades ago.

None of it has anything to do with Amateur Radio.

> Nursie should stop trying to dictate what others said long ago
> or experienced long ago...or even what they say they thought
> long ago...when nursie didn't exist.

"Dictating" what you said?

All I have to do is quote it. I couldn't invent some of the silly stuff
you come up with!

>> Very little in what you post here deviates from what you say you
>>experienced in the 50's, yet YOU take every opportunity to denigrate any
>>Amateur who has the temerity to suggest discussing ANYthing that happened
>>more than a week ago as "traditionalist-fundamentalist".
>
> Nope. Only very specific amateurs. Principally those which
> hang out in here trying to make noises like they are special
> representatives from Newington.

The ONLY people who have ever presented themselves as "representitives
from Newington" were Ed Hare and Jon Bloom, and even then they were quite clear
in stating that thier persoanlly held opinions did not represent the ARRL.

Only YOU make that assertion, and it's still a lie.

> If anyone keeps harping on obeyance-adherence to the
> standards and practices of the 1930s in amateuism of the
> 2000s, then they automatically join the "traditionalist-
> fundamentalist" club.

Then I guess we get to heap you into that pile, Your Scumminess, since YOU
are the ONLY one making any such assertion.

No one in this forum has made any such assertion. Even those who
staunchly support Morse Code testing have advocated advancement in the service.

I encourge you to provide even ONE quote that supports your assertion to
the contrary....

> If anyone uses manual telegraphy
> skill testing as a requirement for use of amateur HF bands
> then they are automatically in the "traditionalist-fundamentalist"
> club. Time can't be frozen but those club members all want to
> freeze out anyone not thinking as they do.

And again that would be you.

Everyone MUST be Lennie, otherwise they are
"traditionalist-fundamentalist, jack-booted Nazi thugs".

>>> The regulars in this venue don't want to hear of that. It wasn't
>>> about "amateur radio" and it hasn't been publicized in QST.
>>
>> Well golly gee whiz, Your Putziness...Ya think it might be due to the
>fact
>>that (a) it happened over FIVE decades ago, and (B) has NOTHING to do with
>>AMATEUR RADIO...?!?!
>
> Poor nursie. Never did any big-time radio communications in
> his military days...resents anyone who did.

This is a forum about AMATEUR RADIO. And yes, I did "big time radio
communication" in the military.

> Poor nursie...never did any radio-electronics engineering and
> resents anyone who did.

I don't resent your alleged engineering career, Lennie. I know several
electronics engineers, and they are fine fellows who make meaningful
contributions.

You are NOT a fine fellow, and there's more than a few indicators that
your "contribution" to radio communications were limited to your few articles
sold to Ham Radio magazine. (No doubt a last resort in "getting published"
since I am sure the professional journals cut you off at the knees.)

Even then I can't find a single example where any of your "work" was
original, nor can I find any example of where your "contributions" were
complimentary to the advancement of ANY radio communications discipline.

> Poor nursie...never could take an opposite opinion to his in
> here and is bitterly resentful to anyone who had spoken out
> in opposition to him.

I am only "bitterly resentful" of pathological liars and persons who
proactively seek to cause

> ACAN (Army Command-Administration Network) of the late...(SNIP) has
NOTHING to do with Amateur Radio, then or now.

> Tsk, tsk, tsk...poor nursie wants to concentrate solely on
> amateur RADIO as if it works by different physical principles
> than other radio of other radio services. It doesn't. The
> examples useful to amateur radio are neglected in the amateur
> press, therefore nursie doesn't want to know anything except
> what is spoon-fed him through hum radio magazines.

Another lie.

I have repeatedly stated it's not the physics.

It's the application.

And it's too bad YOU don't avail yourself of the "hum radio magazines".
(Your true colors are showing, Scumbag.)

> Poor nursie...bitter and resentful to the last. I'll bet nursie loves
> to heckle entertainers from the audience while they are trying
> to entertain an audience.

If I paid money to see someone who isn't, in my opionion, entertaining, I
do one better...I get up, go the manager and get my money back on the way out
the door.

> Nursie can't lighten up. Always has to make fun of others. Not
> a good mental health sign.

Untrue again.

I find it QUITE "enlightening" to keep an eye on you.

And I don't have to make fun of you. You do it yourself.

And I am still waiting for you to post your credentials to tell us what
qualified you to make determinations as to what is or isn't "good mental
health". Leafing through wifey's correspondence courses doesn't qulify.

>> Putz..
>
> Well, back to nursie's name-calling again. "Meaningful discourse"
> in the only way nursie can get along...dissing and cursing those
> who won't agree with him.

It's not name calling if it's true. And you ARE a putz.

Of course I could gobact through tons of YOUR "name calling" and recite
it...Or is Lennie the Liar ABOVE lving up to his own rhetoric...?!?!

> Must be the "new" 'inherent good will of radio amateurs'...

You're not an Amatuer and this forum isn't regulated by Part 97 of the FCC
Rules and Regulations.

>
> The "A" in MARS does NOT refer to Amateur.

Sure it does...to what other radio service is MARS "affiliated"
with...?!?!

> Nursie needs to know his "A" from a hole in the ground.

Too bad YOU don't realize that all those "A"'s don't represent "Army
communications of ocer 50 years ago".

>> One has to wonder what Lennie could have REALLY amounted to if he'd
>been
>>issued some grade-school level common sense.
>
> Tsk, tsk, tsk. "Meaningful discourse?"
>
> Poor nursie. Still resentful that someone took the time and trouble
> to educate himself and keep working in radio-electronics in the
> aerospace industry as a design engineer in radio-electronics and
> then retire with a comfortable income.

Too bad there weren't some human relations courses in that 14 years of
night school, Lennie.

And I don't resent your efforts to be an engineer. One day you may be one.

That you invested your money well was, as I have acknowleged before, one of your only positive acts in your adult life. Congratulations. My nest egg isn't quite as secure yet, but then I still have another 15-20 years to go before I think I'll be ready to stop wotking.

Unlike you, I DO have the pleasure of seeing a meaningful, positive impact on my chosen profession.

When I retire, I'll stop by your grave and see if all of YOUR "comfortable income" got you any farther than it does any other working person.

> Sucks to be nursie?

If there was a "nursie" here, it might.

But we KNOW it sucks to be Lennie!

Putz.

> There are a LOT of military radio systems and equipment NOT mentioned in
>Amateur media...and byt eh same token most of those systems are NOT mentions
>in a great many professional journals, either...! ! ! ! !

Hmmm...General Dynamics as well as ITT make a quarter million
radio sets over a period of 15 years and it is "not" mentioned in
any professional journals?!?!?

Tsk, tsk, tsk. SINCGARS has been in the news since Defense
Electronics monthly was published, is in SIGNAL, the monthly of
AFCEA, gets mentioned periodically in EDN, Electronics Design,
EE Times, RF Design, RF & Microwaves magazines, plus articles
in both Proceedings and some Transactions of the IEEE. It's in
the UK too since Harris is making SINCGARS-compatible radio
systems for them.

Those are all "professional journals" since they are non-
subscription "controlled" periodicals requiring identification of
the reader to the magazines as being in/part/associated with
the electronics industry. Decidedly professional.

Not only that, there are many subscription services which have
newsletters and periodicals and surveys, etc., of the defense
electronics contracts, awards, amounts, add-ons, etc. for those
who can't handle the free information from the government on
such things. Example of the latter is Central Electronics
Command at Fort Monmouth, NJ, which concerns itself with
procurement and overseeing of Army electronics contracts.

> Your point?

There's quite a bit of FREE information out there for anyone to find out about military or government radio systems and communications. Been there for a long time, even before the Internet went public such as the SINCGARS.

A QUARTER MILLION radio sets of one kind makes for some future surplus market, doesn't it? [that's the most of any one kind of radio system in government history...]

If poor nursie is annoyed at not being spoon-fed enough info through hum radio magazines, then he should not try to mean-mouth those who know about such things. Tsk, tsk.

>> Tsk, tsk, tsk. Nursie getting all red in the face with rage again and
>> can't pull out any information from all those "secret" military radios
>> "he can't talk about."
>
> Only you've tried to make it "secret".

No, nursie did, way back when I first mentioned the SINCGARS in here plus the public availability of FM 24-24 of December 1994 (a compendium of signal equipment of all kinds, including HF radio sets, then in military inventory).

Nursie claimed then - in broad generalities - he had "worked in military communications" but could not name ONE SET by either nomenclature or familiar name ANY of them. Claimed he could not talk about them due to not revealing military secrets or some rationalistic reason. Which was all BS, of course, since the general information had long been publicly available through many government sources.

>>> Secondly, there are several "radio hobbyist" magazines available in the

>
> Then you've not been reading any of THOSE publications either.

Tsk, tsk, tsk. I keep mentioning all those periodicals and controlled-subscription magazines and other information, write them in here, sometimes giving detailed information, and nursie keeps saying "I don't read them! :-)

I'm NOT a regular subscriber to PopComm or Monitoring Times, never did get every annual WRTH, don't buy every issue of CQ or QST, nor of the old 73. Got a free subscription to HR after becoming an Associate Editor there. Neither did I buy every issue of PopElectronics or Radio Communication (the RSGB monthly) nor of the old Radio Craft or Radio and Television News or many of the old newsstand monthlies of ancient history. Don't have to...I'm not interested in ham DX contest scoresheets or nostalgia articles of

old hum radio from the 1930s or building two-transistor transmitters
in discarded tuna tine cans nor of building super-duper state-of-the-
art one-tube regenerative receivers (all-band!).

Been IN the electronics industry, seen lots of stuff up close and
personal, designed a little bit of it, used it in the field. Radios.
Modern radios. Got into the guts of them behind the front panel,
know how they work...followed the contract awards, know who
did what on some of it, know the modern history of it instead of
concentrating on old history of one small part of radio related to
hobby activities.

FEMA, SHARES, several government agencies. :-)

See the Army Communicator write-up on Grecian Firebolt 2002
for a good example. :-)

> Too bad there weren't some human relations courses in that 14 years of
>night school, Lennie.

There were under California rules for the early 1960s. :-)

Some of those courses were done during the day. All for
college accreditation.

> And I don't resent your efforts to be an engineer. One day you may be
>one.

Tsk, tsk, tsk. :-)

Poor nursie resents the existance of anyone who has opinions
contrary to his own. The spirit of the "new amateur radio" of this
millenium. :-(

Get mental help.

Meanwhile, temper fry...

LHA / WMD

Military police direct military traffic.

Military communications uses wide-environment government radio
equipment and military personnel to do communications.

> It was true during Viet Nam, it's true today.

The Vietnam War ended in 1975. That was 29 years ago, senior.

The Internet went public in 1991. That was 13 years ago, senior.

Every government and military agency and most military units
now have websites. The modern U.S. military encourages
military personnel to use computer e-mail to message family
and friends.

The DSN (Digital Switched Network) tying U.S. installations and
government locations around the world allow easy dial-up from
the DSN to the outside telephone infrastructure.

Try to get with the modern times. Reality is all around you.

>> MARS has never involved "amatuer radio," only amateur radio.
>
> Again your only defensible argument is that I transposed two letters.

That transposition is a common thing with nursie. Usually done
when very angry and outraged that anyone dare talk back to the
gunnery nurse! :-)

>
> I know you'll find this hard to believe, but life exists beyond
>websites.

I am well acquainted with life. :-)

Been to Fort Huachuca, seen the Army MARS headquarters.

Been to several modern military communications locations,
seen what they have, talked to individuals there.

Reality exists beyond the tattered, dog-eared pages of old QST
issues and ARRL handbooks.

Try to experience reality, not imaginations of long ago.

>>> Otherwise some nicely packaged editorializing by someone who is not
active
>>>in the program and has no practical experience on the subject he's
>>>pontificating about.
>>
>> Now, now. I've been to Huachuca.
>
> I am sure you've been lot's of places. An active imagination allows for
>that.

Fort Huachuca was okay in early spring but I've heard it is uncomfortable
in mid-summer, being in Arizona. Glad I wasn't there in mid-summer.
The Military Intelligence museum wasn't built or open to visitors when I
was there and that interesting place (like the CIA museum) can only be
visited on the Internet.

Sandia Laboratories is different. But, I can't talk much about that
except that visit concerned things like SID.

>> I've controlled MARS transmissions.

>> or Seattle or Manila or Okinawa or even Anchorage.

>
> Uh huh.

Good. Another concession instead of brainless battering
against what happened before you existed.

Unless one is flag rank, it is difficult to pick and choose
where ordinary military folks get assigned. I was fortunate
in being assigned to a big-time communications center.

So was Eugene Rosenbaum. Part of the time. Gene
(N2JTV) got reassigned to Funabashi, TDY with the small
USAF radio communications station there which was not as
nice an assignment as the Hardy Barracks billet or ADA
duties.

>> Nursie did not exist a half century ago. He isn't in any way,

>> publication.
>
> Regardless of my birthdate, your rhetoric and spamming of the NG exists
>TODAY, and it is rife with your tales of what you did five decades ago.

No, not "rife." :-) If you are trying a larger vocabulary, try to get
something somewhat close to correct...and in context.

You are trying to "poison the well" by singling out only specific
instances of what I've mentioned as to experiences and work over
the last 51+ years. Common tactic in computer-modem comms
but easily defeated in fact, made arduous only in the stubborn
insistence of the argumentative to ignore everything else and try
to beat on specifics.

Oddly, it is usually easier to reference military things of the past
due to easier access of reference information compared to civilian-
only occupations. That includes references of a public nature
such as the Pacific Stars & Stripes (see interview with staffer
Rick Chernitzer of their 10 November 2002 edition).

> None of it has anything to do with Amateur Radio.

Radio is radio, regardless of the differentiation that mere human
regulation makers make of its differences.

The Pacific Stars & Stripes did not include a nice photo I made
of the MARS antenna newly installed at Hardy Barracks in
1955 (Stripes used only 6 of my photos for that Hardy retro-
spective interview). One of the two GIs shown on the cover
sheet is/was Stan Peschel who was a ham and the son of the
founder of Hypotronics of New York.

>> Nursie should stop trying to dictate what others said long ago
>> or experienced long ago...or even what they say they thought

>> long ago...when nursie didn't exist.
>
> "Dictating" what you said?

Absolutely. You are outraged that anyone dare confront your
ideas and fantasies with actual, real-life experiences. The same
with several others in here.

The dictatorial attitude is fairly common, done with heckling
and name-calling and general denigration in an effort to make
a poster stop writing. Weak intimidation. Works sometimes,
but is not a guarantee of suppressing truth and reality.

> All I have to do is quote it. I couldn't invent some of the silly stuff
>you come up with!

It's a losing battle to keep dredging up old, lost arguments in a
newsgroup. Those can't be "won" by re-runs as if this were
summer television.

The military directives and regulations about MARS are not
"silly stuff." Those are real. The information published by the
various military branches on their MARS activities isn't "silly
stuff." Those are real.

"Silly stuff" is the exaggeration and over-emphasis on civilian
amateur radio participation - done by part-time participants in
MARS - and trying to make such "silly stuff" be the raison d'etre
(French for "reason for being") of the existance of MARS.

>> Nope. Only very specific amateurs. Principally those which
>> hang out in here trying to make noises like they are special
>> representatives from Newington.
>
> The ONLY people who have ever presented themselves as "representitives
>from Newington" were Ed Hare and Jon Bloom, and even then they were quite
clear
>in stating that thier persoanlly held opinions did not represent the ARRL.

You forgot Jim Haynie. :-)

Not a long series of messages from Haynie but here nonetheless.

[hint: Haynie is the elected president of the ARRL. :-)]

The PARROTING the Noble Goals as written/said by ARRL is the
very same thing as acting like League representatives.

> Only YOU make that assertion, and it's still a lie.

Jim Haynie wasn't elected president of the ARRL? :-(

>> If anyone keeps harping on obeyance-adherence to the
>> standards and practices of the 1930s in amateuism of the
>> 2000s, then they automatically join the "traditionalist-

>> fundamentalist" club.
>
> Then I guess we get to heap you into that pile, Your Scumminess, since
YOU
>are the ONLY one making any such assertion.

Tsk, tsk, tsk. More of that "meaningful discourse" again!

:-)

So, trying to dictate what opinions others may have again?

Not nice.

> No one in this forum has made any such assertion. Even those who
>staunchly support Morse Code testing have advocated advancement in the
>service.

...by more and more manual telegraphy use, praising its supposed
qualities, and generally getting into silly stuff about how it's so much
"better" than any other mode. :-)

Note use of the word "service" again.

Military surrogate use. Desire to make amateur radio much
more than it is by trying to identify a hobby with military service.

Tsk, tsk. Lost focus.

> I encourge you to provide even ONE quote that supports your assertion to
>the contrary....

Heh heh heh. No, "encourage" is the wrong word. You
CHALLENGE. You DEMAND.

You all but hop up and down in spiteful hollering to try to
divert the discussion. :-)

> Everyone MUST be Lennie, otherwise they are
>"traditionalist-fundamentalist, jack-booted Nazi thugs".

Tsk, tsk, tsk. Obviously not a Jedi. Wrong connection of
metaphors. :-)

"Use the Metaphors, Luke, the Metaphors!" :-)

Nursie is into Mirror Time again, reflecting on the total
one-sided viewpoint all must have, the vista according
to Newgington. Tsk, tsk.

>>>> The regulars in this venue don't want to hear of that. It wasn't
>>>> about "amateur radio" and it hasn't been publicized in QST.
>>>
>>> Well golly gee whiz, Your Putziness...Ya think it might be due to the
fact
>>>that (a) it happened over FIVE decades ago, and (B) has NOTHING to do with

>>>AMATEUR RADIO...?!?!

Nursie is an amateur. Nursie didn't exist 50 years ago.

Ergo, nursie is irrelevant? :-)

>> Poor nursie. Never did any big-time radio communications in
>> his military days...resents anyone who did.
>
> This is a forum about AMATEUR RADIO. And yes, I did "big time radio
>communication" in the military.

Yes...on par with those "hostile action" things...all conveniently
UNdetailed, no specifics, nothing but a CLAIM.

Tsk, tsk, tsk. Fish story.

>> Poor nursie...never did any radio-electronics engineering and
>> resents anyone who did.
>
> I don't resent your alleged engineering career, Lennie. I know several
>electronics engineers, and they are fine fellows who make meaningful
>contributions.

I'm sure you have "Jewish best friends," too. :-)

They must have made "meaningful contributions" to your knowledge
of Yiddish. :-)

> You are NOT a fine fellow, and there's more than a few indicators that
>your "contribution" to radio communications were limited to your few articles
>sold to Ham Radio magazine. (No doubt a last resort in "getting published"
>since I am sure the professional journals cut you off at the knees.)

Tsk, tsk, tsk. :-)

You can check out McGraw-Hill's old biweekly Electronics and
Designer's Casebook. You can check out Microcomputing, a former
monthly for personal computerists. You can check out BYTE
magazine as well as BYTE Books on articles concerning
circuit simulation. All reviewed and accepted by others.

You want to make a Big Thing about Ham Radio Magainze
going "defunct" back in 1990...even though HR was considered a
leader in U.S. ham periodicals for technical information...which it
was. The "defunction" was due to a shrinking ham advertising
market already begun by 1990. That shrinking is even affecting
QST. It hit 73 Magazine big time. Unlike QST which can get
support from the ARRL membership monies, HR and 73 were
independent publications whose entire income was derived by
advertising. CQ is the same way and is barely hanging on.

> Even then I can't find a single example where any of your "work" was
>original, nor can I find any example of where your "contributions" were

>complimentary to the advancement of ANY radio communications discipline.

Tsk, tsk, tsk. Having nursie as a critic is like having a blind
color coordinator for interior decoration. :-)

Try to differentiate between "compliment" and "complement."

Nursie struggles on understanding Ohm's Law of Resistance
and tries to mean-mouth things like explanations of timing
diagrams in phase-frequency detectors? :-)

>> Poor nursie...never could take an opposite opinion to his in
>> here and is bitterly resentful to anyone who had spoken out
>> in opposition to him.
>
> I am only "bitterly resentful" of pathological liars and persons who
>proactively seek to cause

What am I "seeking to cause?" Sentence unfinished. :-(

What are "pathological liars," nursie? Nursie no gots da
edumcation in sykology, sointanly ain't gots no certificates
(suitable for framing, hanging on da wall) as a licensed
shrink.

Nursie like to mean-mouth anyone who ain't love his one-
sided opinions. Tsk, tsk.

>> ACAN (Army Command-Administration Network) of the late...(SNIP) has
>NOTHING to do with Amateur Radio, then or now.

Just the same, MARS was allowed to use some of ACAN's
radio circuits on HF.

How about that? By nursie logic, MARS is then NOT
amateur radio!

Must be hell when a rant is stomped on... :-)

>> Tsk, tsk, tsk...poor nursie wants to concentrate solely on
>> amateur RADIO as if it works by different physical principles
>> than other radio of other radio services. It doesn't. The
>> examples useful to amateur radio are neglected in the amateur
>> press, therefore nursie doesn't want to know anything except
>> what is spoon-fed him through hum radio magazines.
>
> Another lie.

Nursie definition of "lie:" Anything against nursie's beliefs.

:-)

> I have repeatedly stated it's not the physics.

Radio works by magic, not laws of physics? Oh, my!

> It's the application.

"Rub into affected area once daily, as prescribed by
physician?" :-)

> And it's too bad YOU don't avail yourself of the "hum radio magazines".
>(Your true colors are showing, Scumbag.)

A long-time radio amateur used to say "hum radio." :-)

He is the same one that put tongue firmly in cheek and stated,
"Ham is the butchered meat of swine." :-)

Funny in context.

Probably a cause for thermonuclear war to nursie. :-)

>> Poor nursie...bitter and resentful to the last. I'll bet nursie loves
>> to heckle entertainers from the audience while they are trying
>> to entertain an audience.
>
> If I paid money to see someone who isn't, in my opionion, entertaining, I
>do one better...I get up, go the manager and get my money back on the way out
>the door.

Tsk, tsk, tsk. Nursie should read the entertainment reviews in
QST before going. Saves everyone time and trouble. :-)

>> Nursie can't lighten up. Always has to make fun of others. Not
>> a good mental health sign.
>
> Untrue again.
>
> I find it QUITE "enlightening" to keep an eye on you.

Nursie is OBSESSED. Is COMPELLED to mean-mouth
others who go against his opinions.

Sicko.

> And I am still waiting for you to post your credentials to tell us what
>qualified you to make determinations as to what is or isn't "good mental
>health". Leafing through wifey's correspondence courses doesn't qulify.

Sicko words are sicko words to lay people, nursie.

>>> Putz..
>>
>> Well, back to nursie's name-calling again. "Meaningful discourse"
>> in the only way nursie can get along...dissing and cursing those
>> who won't agree with him.
>
> It's not name calling if it's true. And you ARE a putz.

Tsk, tsk, nursie should have his Jewish best friends tell him
more about the Yiddish dialect-language. Needs more "meaningful

discourses" on Yiddish snarlies. :-)

> Of course I could gobact through tons of YOUR "name calling" and recite
>it...Or is Lennie the Liar ABOVE lving up to his own rhetoric...?!?!

First you need to explain what and how of "gobact."

Not in any dictionary I have. That word published in
QST?

>> Must be the "new" 'inherent good will of radio amateurs'...
>
> You're not an Amatuer and this forum isn't regulated by Part 97 of the
>FCC Rules and Regulations.

Nursie ain't no "amatuer" either. :-)

Newsgroup ain't regulated by nursie, either. [ain't that a bitch?]

:-)

Temper fry...

Absolutely. Net Control logs (and logs that folks on the net, or
listening to the net, may keep and donate) are a great way to see how
precise and effective the communication was during the net!

There used to be some logging software (don't remember the application
now) that was great for use by Net Control during a net. However, in
my opinion, it's always absolutely best to have Net Control dedicated
to conducting the net, with a true log of communication being kept by
another party(ies).

Great.

Then all those Amateurs who ARE interested in military communications
DON'T have to depend on QST, et al to discuss them.

> A QUARTER MILLION radio sets of one kind makes for some
> future surplus market, doesn't it? [that's the most of any one
> kind of radio system in government history...]

Sure it does. And "surplus" radio gear has NOT been the preferred method
of getting on the air by Amateurs for TWO DECADES....Not when folks can buy
brand new, under warranty equipment for under $200.

> If poor nursie is annoyed at not being spoon-fed enough info
> through hum radio magazines, then he should not try to mean-

Actually, my words then, as they are now, are that what I did in the Armed Forces have nothing to do with Amateur Communications. Just like YOUR "link" with Amateur Radio, Lennie, those "happenings" only shared the theoretical basics of radio wave generation and propagation.

It's the application...not the physics...that separates you from the rest of us, Sir Scummy.

Sucks to be you.

"I am only here to civilly debate the Morse Code test issue". From the
archived lies of Leonard H. Anderson.

> That was 29 years ago, senior.
>
> That was 13 years ago, senior.

If you're going to parody Spanish, Lennie, you should at least spell it
correctly.

> The DSN (Digital Switched Network) ...(SNIP)

Even more completely unrealted, off topic trivia from one who must hide
behind it.

> Try to get with the modern times. Reality is all around you.

Yes, it is.

Too bad you can't share in it, eh...?!?!

> I am well acquainted with life.

Nop, you're not. You are well acquainted with your PERCEPTION of it from
behind textbooks and CRTs.

> Reality exists beyond the tattered, dog-eared pages of old QST
> issues and ARRL handbooks.

Yes, it does. I and others have pointed that out to you on numerous
occassions and invited you to come out and try it. You've declined. Too much
security in LennieLand.

> Fort Huachuca was okay in early spring but I've heard it is uncomfortable
> in mid-summer, being in Arizona. Glad I wasn't there in mid-summer.

I HAVE been there in mid-summer...and late summer when it's actually worse.
On several occassions.

> Sandia Laboratories is different. But, I can't talk much about that
> except that visit concerned things like SID.

Ahhhhhhhhhh.......I see.

Someone else suggests some "security" issues and you try to denigrate them
for it.

You think you're promoting your "insiderness" and you wave it like a flag.

> No, not "rife." :-) If you are trying a larger vocabulary, try to get
> something somewhat close to correct...and in context.

Yes...rife was correct and in context.

> You are trying to "poison the well" by singling out only specific
> instances of what I've mentioned as to experiences and work over
> the last 51+ years.

In other words, I hit the mark so close that you'll be dressing the wounds
from the "collateral damage" for days.

>> None of it has anything to do with Amateur Radio.
>
> Radio is radio, regardless of the differentiation that mere human
> regulation makers make of its differences.

Only in your mind, Lennie.

If that assertion was so true, you'd have no basis for your OTHER rants
that insist that Amateurs must spend thier time learning about "other" radio
services.

If "Radio is radio", your other assertions are baseless.

> The Pacific Stars & Stripes did not include a nice photo I made
> of the MARS antenna newly installed at Hardy Barracks in
> 1955.

And they didn't use the pictures I had of the Loch Ness monster either,
Lennie.

>> "Dictating" what you said?
>
> Absolutely. You are outraged that anyone dare confront your
> ideas and fantasies with actual, real-life experiences. The same
> with several others in here.

Why is it that all those "others" are focused on YOU, Lennie?

Perhaps YOU are the one with the perception problems?

That's a rhetorical question, of course. With absolutely NO experience in
Amateur Radio, we know you have no informed, valid expereicen from which to
base your comments.

> The dictatorial attitude is fairly common, done with heckling
> and name-calling and general denigration in an effort to make
> a poster stop writing. Weak intimidation. Works sometimes,
> but is not a guarantee of suppressing truth and reality.

And therein lies the bane of your existence...

Still having a hard time wondering why your "superior intellect" can't
squash all those "lesser beings" with your infinite wisdom.....

Too bad you can't objectively review what you just wrote against your
conduct over the last several years.

>> No one in this forum has made any such assertion. Even those who
>>staunchly support Morse Code testing have advocated advancement in the
>>service.
>
> ...by more and more manual telegraphy use, praising its supposed
> qualities, and generally getting into silly stuff about how it's so much
> "better" than any other mode.
>
> Note use of the word "service" again.

Hmmmmmm....The FCC uses it to describe Amateur Radio.

The Commissioners are not licensed Amateurs...Lord knows none of them hold
ANY form of licensure by the FCC.

YOU frequently point out the Commissioners status.

Are you NOW telling us that the language used by those very same
Commissioners is WRONG...?!?!

> Military surrogate use. Desire to make amateur radio much
> more than it is by trying to identify a hobby with military service.

That's YOUR schtick, Lennie.

> Tsk, tsk. Lost focus.

Nope. Never have.

>> I encourge you to provide even ONE quote that supports your assertion
>to
>>the contrary....
>
> Heh heh heh. No, "encourage" is the wrong word. You
> CHALLENGE. You DEMAND.

It would be a "challenge" to you, Lennie...In as much as the quotes you
need do not exist.

> You all but hop up and down in spiteful hollering to try to
> divert the discussion.

Nope...It's right on. You make all sorts of assinine assertions about
Amateur Radio in general and some Amateurs in particular, then can NEVER back
up your assertions.

You make assertions of fact.

I want you to validate them.

You never do. You CLAIM to be a "radio professional". You are not now
nor ever were anything of the kind.

>> I don't resent your alleged engineering career, Lennie. I know
>several
>>electronics engineers, and they are fine fellows who make meaningful
>>contributions.
>
> I'm sure you have "Jewish best friends," too.

I don't have to make such claims, Lennie.

You seem to make a lot of them, though.

>> You are NOT a fine fellow, and there's more than a few indicators that
>>your "contribution" to radio communications were limited to your few
>articles
>>sold to Ham Radio magazine. (No doubt a last resort in "getting published"
>>since I am sure the professional journals cut you off at the knees.)

> QST. It hit 73 Magazine big time. Unlike QST which can get
> support from the ARRL membership monies, HR and 73 were
> independent publications whose entire income was derived by
> advertising. CQ is the same way and is barely hanging on.

The "shrinking ham advertising" was due to a lack of support of consumers.

No consumers = no advertising monies = defunct.

Corporate advertisers do not spend thier advertising monies where it is
not netting a reasonable return.

If "Ham Radio" had been the marvel of publishing accomplishment you'd care to have us beleive, it would still be actively published instead of being polished and repackaged as a CD novelty.

"73" lost it's readership because Wayne Green is a senile idiot who ran it into the ground...not once, but twice. And how many "QRP" and "antenna specials" can one magazine run in a year...?!?! And those "editiorials"...?!?! Sheeeesh! Talk about being the poster boy for "Paranoia Today"....

>> Even then I can't find a single example where any of your "work" was
>>original, nor can I find any example of where your "contributions" were
>>complimentary to the advancement of ANY radio communications discipline.
>
> Tsk, tsk, tsk. Having nursie as a critic is like having a blind
> color coordinator for interior decoration. :-)
>
> Try to differentiate between "compliment" and "complement."

In either use of either word, there is no professional historical documentation that would indicate that Leonard H. Anderson did anything other than sweep floors in ANY "aerospace" installation or facility.

And as far as your "contributions" to Amateur Radio via your HR pieces, I find no occassion where your work was footnooted, included or otherwise madse part-and-parcel of any other paper or work.

And I did look. Closely.

>>> Poor nursie...never could take an opposite opinion to his in
>>> here and is bitterly resentful to anyone who had spoken out
>>> in opposition to him.
>>
>> I am only "bitterly resentful" of pathological liars and persons who
>>proactively seek to cause
>
> What am I "seeking to cause?" Sentence unfinished.

Yep...I changed a sentence prior to "sending" and clipped it.

Here's the full sentence: "I am only 'bitterly resentful' of pathological liars who proactively seek to cause harm to Amateur Radio for no other purpsoe than to sate his own ego".

> What are "pathological liars," nursie?

You are a pathological liar, Lennie.

You can't tell or acknowledge the truth. Your lying is habitual. Even when you DO quote or recite factual information, who can trust you?

> Nursie no gots da
> edumcation in sykology, sointanly ain't gots no certificates
> (suitable for framing, hanging on da wall) as a licensed
> shrink.

No licensure as a mental health worker, Lennie. True.

However I DO have certifications in Emergency Nursing, in and among which is included managing psychiatric emergencies.

Which is one more than YOU have.

>> And it's too bad YOU don't avail yourself of the "hum radio magazines".
>
>>(Your true colors are showing, Scumbag.)
>
> A long-time radio amateur used to say "hum radio."

And you are not a "long time radio amateur". Never were, and God willing, never will be.

>> I find it QUITE "enlightening" to keep an eye on you.
>
> Nursie is OBSESSED. Is COMPELLED to mean-mouth
> others who go against his opinions.

Nope...not "mean-mouth".

Expose. As if it took any effort to do...

And if you didn't post such foolishness, I wouldn't have anything to work with. HARDLY "obsessed".

>> And I am still waiting for you to post your credentials to tell us what
>>qualified you to make determinations as to what is or isn't "good mental
>>health". Leafing through wifey's correspondence courses doesn't qulify.
>
> Sicko words are sicko words to lay people, nursie.

Well, Lennie, I am neither "lay people", nor am I the "sicko" that you insinuate.

And still waiting on your psychiatry credentials.

Steve, K4YZ

5008. CB and ham radio are the same.

>of text based adventure game.

Good precis, Mike. However, there's one group left out from this
venue, the Traditionalist-Fundamentalist who has adopted a very
rigid set of geas set out to cleanse a personal involvement with
an avocational radio activity. ("geas" refers to magical gimmicks
set to keep devils out of a local territory)

>With the different personalities involved, the games can get pretty
>interesting and funny, or sometimes they can become boring and
>repetitive. The MARS is Ham radio stuff is a good example of the latter.

Agreed. But, the "MARS is amateur radio" statement is an
example of not only a Traditionalist-Fundamentalist but one who
wants to make a hobby into a surrogate of a military life, of
rigid obeyance of some kind of "orders" from a fantasy of what
a hobby really is...and then fails to note the existance and the
raison d'etre of that particular originally-military radio service.

MARS was originally conceived (under the previous AARS) to
get radio amateurs involved with the U.S. Army communications
of 1925. Comms of any radio service of 1925 were rather
simple. Even the Army admitted that. The AARS never grew to
be a big thing and WW2 put a halt on everything amateur insofar
as operations. There's not much about "phone patches" as a
goodwill effort to give servicemen a link with home through
amateur radio prior to 1942... :-)

During the Cold War times, phone patches, whether through
MARS or individual hams, were very good for boosting morale,
especially for those stuck in so many foreign places. It hit a
high point with the Vietnam War, the southeast Asian MARS
stations handling up to 42,000 phone patches a month up to
1970. That's referenced at the Army's Center For Military

History (CMH) and available for download by anyone. [I gave
the link in here]

But, the Vietnam War ended 29 years ago, almost a generation
and a half in the past. MARS still has the task of involving
civilians with military radio but MARS has, for a long time,
changed its mission to be a true auxilliary radio service in the
military, that of being an affiliate communications service with
other U.S. government radio services. The one-month exercise
two years ago of Grecian Firebolt 2002 showed that MARS
does function quite well on its own without civilian radio amateurs
to fulfill its mission.

The existance and definition of MARS is covered by publicly-
available documents. However, the image in the minds of many
is solely from amateur publications (who overemphasize ham
involvement relative to the bigger mission picture) and that
image is about three decades out of date.

> If a poster is the type that is trying to antagonize others - that is

>she does not want to get people so angry that they don't respond. That
>would be losing the game. This player will want to be antagonistic of
>course, but will want to allow other posters to stay just this side of
>filtering or ignoring him or her.

Some have their minds made up and will never change. :-)

In here, several operate slightly differently in that perceived personal
"honor" is involved. They say something wrong or make an error and
then refuse to admit it until pinned against several walls and had it
rubbed all over them. :-)

That applies on any subject in any computer-modem venue, was so
even back in the late 1970s on ARPANET...then the original
USENET (probably the worst are academics not yet risen to their
full titled heights, heh heh)...continued on into BBSs and now the
Internet.

Amateur radio in general seems to be one of the most conservative
of all radio services...plus the fact that most of the hobbyists are
quite unaware of what goes on in other radio services. Amateur
radio publications seldom mention other radio services in the USA.
As a result there is a great deal of insularity (a sort of "dielectric
materialism") which, in turns, breeds even more conservatism.

Most interesting, that conservatism. Radio communications involves
the sharing of information. Radio does it very fast, yet the technology
advancements are all coming from the designer-manufacturers.

> Some here filter Len, but enough do not that he finds a steady stream
>of willing participants in his game.

The regulars are a very, very tiny percentage of the entire hum radio licensees...and they seem to be staunchly, archly, embedded-in-old-concept holes in the ground on what amateur radio "should be." Not a good venue to discuss anything but hidebound status-quoism.

Those who aren't in agreement with keeping things absolutely the same as when those olde-tyme hammes got their beloved licenses is in for a rough go. :-)

> Face it, he is good at it. It may not be what you are in here for, but
>he succeeds in his game.

It may be a game to others, Mike, but it is a lunchtime amusement for me. :-)

In one way, it is fun to poke holes in others' faulty concepts such as telegraphy and the Absolute Need to test all licensees for that ability forever and ever into the end of time in order to invade their precious HF turf! :-)

51 years ago I lucked out in my military service and got stationed at a major communications facility. That changed my concepts of what radio communications was about. Practically a wholesale revision, having had little exposure prior, all from amateur publications. The Army, the Navy, the Air Force just didn't use any telegraphy then for fixed-point to fixed-point radio communications. They had not done so since WW2. The USN depended on on-line cryptographic communications in the fleet, on cruisers and heavier class ships back in 1940 (that's how the USN could coordinate movements to engage in the Battle of Midway). That crypto messaging was by RTTY, not manual telegraphy. The "Sigaba" crypto TTY system was never compromised.

The regulars in this venue don't want to hear of that. It wasn't about "amateur radio" and it hasn't been publicized in QST. Except for Heil, none of the regulars were involved in any big-time radio communications experience. As a result, many are openly antagonistic against anyone who has done so and try to divert the thread into claims that I "embellish" my "CV," tooting my own horn so to speak :-) Really no. I'm trying to point out that "CW" was already being downsized a half century ago and its use is constantly decreasing until it has virtually disappeared for communications everywhere but in amateur radio.

> Note this does not apply to the strange fringe postings that appear to
>be personal battles, such as the one that Dave seems involved in with
>some hams in his locale. That is just really wierd stuff.

The true antagonistic poster seldom gets much response. Those get a large charge out of saying the worst things about another. That's part of the time-distance isolation "safety factor" for them in computer-modem communications. They can get away with it! :-)

What gets "weird" (or 'wired') is when another replies with correct facts and Strong response. The original antagonists almost go berserk. :-) [see the posts of the one who likes to use the word "putz"] The original antagonists Hate that sort of thing. It spoils their private little sociopathy game they so enjoy. :-)

>>>You

>
> And yet you are now involved once more!

He can't help it. His "honor" is at stake...someone put a stake through a vital part back when he was trying to peddle Uber-status-quoism all about keeping amateur radio forever locked into the old standards and practices.

It may be an "evangelical" kind of thing. Or just brainwashed syndrome.

Ethnic cleansing must be done, impure concepts washed away.

>>> This is no small accomplishment. I for one have to respect that.
>>
>> I don't.
>
> You don't have to, that much is true.

Life is tough and then you newsgroup... :-)

"Sine die" - someone turned off the audio oscillator...

QED is not one of the "Q codes" in telegraphy.

Back to trying to find out what's holding me down in my search for anti-gravity...

> > person, I would be killing a ton of trees.

I log all my HF activity even if they are repeat contacts but not VHF. The reason for not logging the latter is that most of my VHF activity is drive time chitchat and doesn't travel great distances. Unusual VHF or UHF contacts, I do log.

However there is another very good reason for keeping a log even though not required. If your call is ever "hijacked" (and this has happened to people) and you get cited for violations you never committed, you can use your log as supporting documentation that you were not on that frequency at that date and time. Although logs could be forged, when you show that you have habitually kept a log and that log appears to be undoctored, the FCC is inclined to decide in your favor.

I keep both a paper log and a computer log. I enter contacts in both. The paper log is a backup just in case the computer log becomes irretrievable. And I can sit on my sofa and thumb through my paper log just for the fun of looking at old contacts. The computer log lets me easily find how many times I've worked a person, state or country, track number of states worked, etc.

The ARRL Letter
Vol. 23, No. 25
June 18, 2004
[The ARRL has weighed in on behalf of Iowa amateur and ARRL member Jim Spencer, W0SR, of Cedar Rapids, who has suffered severe broadband over power line (BPL) interference for more than two months. A formal complaint to FCC Enforcement Bureau Chief David H. Solomon calls on the Commission not only to order Alliant Energy's BPL field trial system to shut down but to fine the utility $10,000 for violating the Communications Act of 1934 and FCC Part 15 rules. Alleging "ongoing harmful and willful interference to one or more licensed radio stations," the ARRL asked Solomon to intervene "on an emergency basis."]

http://www.uplc.utc.org/index.v3page?p=44489

http://www.uplc.utc.org/file_depot/0-10000000/0-10000/7966/folder/33324/UPLC%20Comments%205_3_2004.pdf

Power companies are in full denial! (Just saying it doesn't make it true.) If you believe what's being said by UPLC, I have some great land to sell you in Florida, and a wonderful bridge investment in New York. (When did the BPL interference spectrum drop to 1.7 MHz ??)

ak

- - - - - - - - - - - - - - THE UPLC STORY - - - - - - - - - - - - - -
SUMMARY
The UPLC generally supports the FCC's initiative to develop rules that will support the deployment of broadband over power line systems that will help achieve President Bush's goal of universal affordable broadband access by 2007.1 The President supports the development of technical standards for BPL towards that goal.2 Utilities and technology providers are poised to meet this ambitious goal and the UPLC appreciates the strong support of the FCC in its BPL proceedings.

The UPLC believes that the definition of Access BPL is potentially over-inclusive and should be slightly revised. The UPLC supports the proposal to retain the existing emission limits at the present time, recognizing that the FCC is proceeding cautiously, even though it has found that the interference potential from BPL is low.

Before the Federal Communications Commission
Washington, D.C. 20554
In the Matter of Carrier Current Systems, including Broadband over Power Line Systems

ET Docket No. 03-104
ET Docket No. 04-37
Amendment of Part 15 regarding new requirements and measurement guidelines for Access Broadband over Power Lines Systems
COMMENTS OF THE UNITED POWER LINE COUNCIL

Pursuant to Section 1.415 of the Federal Communications Commission ("FCC") Rules, the United Power Line Council ("UPLC") hereby submits its comments in response to the Notice of Proposed Rule Making in the above referenced proceeding.3 The UPLC supports the proposal to retain the existing emission limits at this time, and suggests only slight changes to the operational limits proposed for Access BPL systems, as well as the proposed definition of Access BPL. Finally, the UPLC supports the proposed measurement guidelines, which will produce consistent and repeatable results that demonstrate compliance with the Part 15 rules. The UPLC heartily thanks the FCC for its support in developing these rules, which strike a very conservative and pragmatic.

. . . .

The UPLC is dismayed by the misinformation accepted as gospel by opponents of Access BPL systems. Despite apocalyptic predictions that "BPL is a Pandora's box of unprecedented proportions", the UPLC agrees with the FCC that Access BPL devices will not cause the power lines to "act as countless miles of transmission lines all radiating RF energy along their full length."6 These opponents have produced no scientific evidence to show otherwise, and all the measurements in the field contradict their abstract calculations. The industry continues to test and to address these concerns with licensees in areas where systems have been deployed, but there needs to be a rule of reason when it comes to allegations of BPL interference, and the UPLC applauds the FCC for making that message clear in this proceeding.

Definition of Access BPL
The proposed definition of Access BPL systems should be narrowly tailored to apply only to systems used to provide broadband access to the customer premises. As such, the UPLC recommends this slightly revised version of the FCC's language in the NPRM: Access Broadband over power line (Access BPL): A carrier current system that transmits high frequency (>1.7 MHz) radio frequency energy by conduction over electric power lines owned, operated, or controlled by an electric service provider for the purpose of delivering broadband data services. The electric power lines may be aerial or underground, but do not include power lines within the customer premises or in riser conduit within buildings. Access BPL does not include power line carrier systems, as defined in Section 15.113 of the Commission's rules.

Exactly. When you were in Japan, there weren't even any Bear bombers in service.

But in the '60s, when I was growing up, the Soviets had much more nuclear strike capability. I'm old enough to remember the Cuban missile crisis, even though I was only in elementary school at the time.
>
> Rev. Jim IS predictable.

Who?

> Lives in the PAST.

Well, you can't be referring to me.

I'm not the one who repeatedly brings up half-century-old military communications experience as some sort of qualification to determine amateur radio policy *today*. While neglecting to mention that the facility involved was entirely paid for by others, and utilized the full-time contributions of over 700 other personnel....

Now, *that's* "living in the past"

I don't "live in the past". But I do have a decent memory, and the skills to use reference resources. That obviously bothers the heck out of you, Len, judging by how you respond to my posts.

> He MUST keep on

All "big-time radio communications experience" does not happen on HF,
30 transmitters is not a remarkable number of transmitters, and power
levels of a mere 1KW are distinctly small-time. But to satisfy your
criteria, here are a few examples of my assignments with more than 30
transmitters, 1KW or larger.

At NAVRADSTA(T) Barrigada 78 transmitters none smaller than 5KW
(AN/FRT-39). Largest was 200KW (AN/FRT-72).
At USS Annapolis AGMR-1 48 transmitters, none smaller than 1KW
(AN/URT-23). Largest was 40KW (AN/FRT-40).
At NAVRADSTA(T) Driver 55 transmitters none smaller than 10KW
(AN/FRT-39B). Largest was 600KW (AN/FRT-100).
At COMSECONDFLT, uncounted transmitters situated on more than 150 ships,
including 8 aircraft carriers.

How many 200 KW and 600KW transmitters did the super corporal of ADA
operate?

With all kind wishes,

Hans Brakob
Master Chief Radioman, US Navy

Perfect example! Thanks, Alun!

In point of fact, the alleged /T5 operation was allegedly on 10 meters, and at
least two QSOs (OD5 and somewhere in Eastern Europe) were reportedly made.
Given the state of 10 meters in 1993, such contact reports are quite credible,
even with a very makeshift station.

Hello, Hans

Most interesting, indeed. Just out of curiosity, do you have an idea of how much power the Navy uses on the VLF stuff? Just curious. When you start talking 6 zeros in the power level, three zeroes *does* start to look pretty small time ;)

Best regards from Rochester, NY

Among those that have been logged over the last week or so are:

14396.4 kHz (they were .1 low) 14/1800 Jun UTC:
SHARES exercise in support of GRECIAN FIREBOLT 2004.
Check-in window #1 of 4 scheduled, each day at 1800-1900 UTC.
Ctrl shared by: KGD34 (NCC/Shares liason, VA), AFA4BR (Shares
Coordination Station, Gulf Coast, Houston), DLA303 (SCS, Northwest,
Defense Logistics Agency, WA.); Working: KOQ434 (US Customs, NC,
possible SCS), KOQ636 (US Customs, ?), KDM52 (FAA, Memphis, TN),
KHA925 (NASA, Johnson Space Flight Ctr, Houston), WGY908 (SCS, FEMA
Region 8 Control, Denver, CO), KCR873 (USDA, Boise, ID, with traffic),
Puerto Rico CAP 20, WNIC426 (Phone company/ NTA, IL), among others
which were missed due to QSB.

KGD 34 went to 14995.0 at 1830 with KCR 873, to receive the traffic.
They were weak - message was copied by KGD 34 and passed successfully,
but no copy here. ALE and PACTOR BBS check-ins are 24 hours daily for
the duration.

5403.3 - Group HF with T, A and lots of others

8668.5 - This is a WHISKEY Air Defense battlegroup net with HOTEL
WHISKEY as NCS. Simulated air attacks, with carrier strike package
targeting track 3515, track 3515 being declared hostile, eventually
with "splash two". Later, VICTOR wkg HW re strike package is feet dry.

8252.0 - BRAVO FOXTROT Net (USB) USN FOXTROT battlegroup net with
BRAVO FOXTROT as NCS.

The U.S. Navy's current exercise is named SUMMER PULSE 04 and will conclude in August, this involves having simultaneous deployment of seven aircraft carrier strike groups.

The carriers involved are the Norfolk-based USS George Washington (CVN 73), the San Diego-based USS John C. Stennis (CVN 74), the Yokosuka, Japan-based USS Kitty Hawk (CV 63), the Mayport, Fla.-based USS John F Kennedy (CV 67), the Norfolk-based USS Harry S. Truman (CVN 75), the Norfolk-based USS Enterprise (CVN 65), and finally, the USS Ronald Reagan (CVN 76), which will conduct operations in the U.S. Northern Command and U.S. Southern Command theaters during the ship's interfleet transfer from Norfolk, Va., to its Pacific Fleet homeport of San Diego.

When you consider that no carrier goes anywhere alone but instead has various mixtures of destroyers, cruisers, attack subs, and at least one ammo/oiler/supply ship in its CSG (Carrier Strike Groups are formed and disestablished on an as-needed basis; but while one may be different from another, all are comprised of similar types of ships), that's a heck of a lot of radio traffic, so I'm sure the freqs listed above only skim the surface. Conspicuous by their absence from the above freqs are freqs for LINK-11 (TADIL-A) voice coordination nets, for example.

Needless to say, these guys can also change frequency at any time, and will according to mission requirements, propagation, QRM, and other considerations - including COMSEC.

QST had a story many years ago when the VLF station in Maine was first
opened. I remember
a picture of a man standing up inside the coax. Power was in the 2
Megawatt range.

Now we will see if the FCC will abide by their own part 15 rules and
shut BPL down until when/if the problem is fixed. Anyone want to bet
they don't?

Okay, on the basis for one wrong statement, you mount an "air"
assault? :-)

How does a mistaken NATO code name have a relation with the
adoption of the NATO phonetic alphabet in communications in
1955?

Ah! It doesn't. But, Rev. Jimmie is out to discipline "his flock"
for "inaccuracies!" [I sense another Sermon on the Antenna
Mount in preparation! :-)]

>But in the '60s, when I was growing up, the Soviets had much more nuclear
>strike capability. I'm old enough to remember the Cuban missile crisis, even
>though I was only in elementary school at the time.

...did you also think of U.S. military communications as consisting
of hundreds of radio operators with headsets and code keys busy
tapping out messages? :-)

>> Lives in the PAST.
>
>Well, you can't be referring to me.
>
>I'm not the one who repeatedly brings up half-century-old military
>communications experience as some sort of qualification to determine amateur
>radio policy *today*. While neglecting to mention that the facility involved
>was entirely paid for by others, and utilized the full-time contributions of
>over 700 other personnel....

Hmmm...let's see...Rev. Jimmie brings up all the morse code
ham stuff of the 50s and 60s (plus all sorts of tidbits of old

ham regulations which don't apply today) and I mention that
the U.S. military quit using manual telegraphy for fixed-point
communications in 1948. Now what kind of conclusion can we
draw from that?

Oh, yes, my mention is "wrong" since it fails to honor and
glorify the tradition of morse code in amateurism which must,
in the Belief system of Rev. you-know-who, be preserved
forever and ever in amateur radio regulations.

Okay, any positive statements about morse code are allowed
and even honored even though some of the individuals involved
are obviously fish stories. Those against morse code are evil,
wicked, mean, and nasty, are always incorrect and should never
be considered. :-)

So, some olde-tyme hamme can say he "shot bears for navel
intelligence" and that be okay. Navel intel is fine as long as
person is for morse code.

[someone's belly-button is undone...]

>Now, *that's* "living in the past"

Wasn't there some stuff by the good Rev. about "the past is
prologue?" :-)

>I don't "live in the past". But I do have a decent memory, and the skills to
>use reference resources. That obviously bothers the heck out of you, Len,
>judging by how you respond to my posts.

Yes, "obviously." So very serious! :-)

A regular World Sirius, "dogging" my thoughts! :-)

>> He MUST keep on
>> fighting the good fight over ancient postings, again and again and
>> again and again and...<yawn>
>
>You mean the like the one where you called another poster a "feldwebel" and
>told him to "shut the hell up"?

Right. The ROE of this newsgroup is:

1. Any kind of language or lack of civility by any morse code
proponent is perfectly acceptible, even encouraged.

2. Anything said by anyone who does not love, honor, cherish
morse code is to be denigrated, insulted, vilified, and looked
at nasty just because of what they think. All of those sub-
humans must always behave civilly and show respect for the
code lovers even if the code lovers are behaving as iceholes.

That pretty well sums it up. :-)

Rev. Jimmie, go back to Google where you live...

LHA / WMD

>
>How many 200 KW and 600KW transmitters did the super corporal of ADA
>operate?

None. ADA was/is an ARMY callsign. :-)

ADA is presently the Headquarters call of the USARPAC (United
States Army, Pacific) located at Fort Shafter, Hawaii.

I have no idea what USARPAC is running on HF now. Left ADA
in 1956...that's 48 years ago. The facilities of ADA were
transferred to the USAF in 1963 (callsign changed, equipment
the same) but the USAF closed that entire facility down in 1978.

There's an "HF Department" of the 78th Signal Service Battalion
stationed at Camp Zama, Japan, under the 516th Signal Brigade
at Fort Shafter. I don't have any details on what the 78th has
nor of any extensive "inventory." :-)

Back in late 1954 the 40 KW Collins transmitter hadn't yet been
given the military designation of AN/FRT-22. :-) For that matter,
the 24-voice-channel GE microwave terminals (commercial)
weren't given the "official" designation of AN/FRC-25...the
"credential" for such importance consisting of sticking on a label

on each of the six terminal racks' doors, thereby making it "military." :-) Those just kept on working into the USAF responsibility shift.

ADA was never the biggest Army station, those facilities probably never the biggest USAF station after 1963. The ADA receiver site at Camp Owada was shared with the USAF in the 1950s and was described as the largest receiver site in the world at the time with pairs of rhombics for each circuit (space diversity with multicouplers and diversity adapters) and the whole works running 24/7. TTY Relay at Chuo Kogyo (later at Building 898, North Camp Drake) handled 220 thousand messages a month in 1955. Not the biggest since WAR (Washington Army Radio) TTY Relay handled 1.2 million a month in that same year. Except for some trials of mods, all the rest of the TTYs ran at 60 WPM rates.

That was a half century ago. Times have changed. Some ideas of what the U.S. military does now, or even did back a half century ago are purely imaginary in the minds of those that weren't involved in military communications then or later.

Yes, I was a corporal back a half century ago, a PFC before that, and the equivalent of today's SSGT afterwards, that as an operating team leader and later as a supervisor of microwave relay operations and maintenance. All in three years of that assignment. Thank you for mentioning it. :-)

I could not dare to achieve any heights of greatness nor the nobility of purpose or excellence of the United States Navy in a short volunteer military active duty time of 4 years...not even in the reserves for 4 more...just army stuff, what an ex-murine called "radio clerk" things. :-)

Thank you for the rendition of "Rancors Away..." :-)

> Even more completely unrealted, off topic trivia from one who must hide
>behind it.

The U.S. government doesn't have the DSN? tsk, tsk, tsk.

DSN works very well. The "government's own internet" as one in
government put it. I've communicated on it. [no license required]

>> Try to get with the modern times. Reality is all around you.
>
> Yes, it is.

Try to get out of the ham tunnel you inhabit.

> Too bad you can't share in it, eh...?!?!

? "Share" in your small tunnel? Your little imagination?

>> I am well acquainted with life.

More like death and destruction from appearances. You wish ill on
all who oppose your opinions, even to the point of wishing them dead.

Nursie wanna destroy anything anyone say about opposite
opinions as if they are heretical or perverse.

Not a healthy mind indicator to any lay person.

> Nop, you're not. You are well acquainted with your PERCEPTION of it from
>behind textbooks and CRTs.

...and behind radios. Actual radio communications.

Sunnuvagun, how about that?

Someone other than olde-tyme hammes using non-amateur radios
for communications! [who would have thought of it? :-)]

>> Reality exists beyond the tattered, dog-eared pages of old QST
>> issues and ARRL handbooks.
>
> Yes, it does. I and others have pointed that out to you on numerous
>occassions and invited you to come out and try it. You've declined. Too
>much security in LennieLand.

"Security?" Well, yes, I am secure but not in the sense of document
security. :-)

Ah yes, nursie's reality is rated "top sacred" in classification. :-)

>> Fort Huachuca was okay in early spring but I've heard it is uncomfortable
>> in mid-summer, being in Arizona. Glad I wasn't there in mid-summer.
>
> I HAVE been there in mid-summer...and late summer when it's actually
>worse. On several occassions.

Of course you have. You've been everywhere that I've been. :-)

It's all documented in this newsgroup. :-)

Nursie has been to an HRO store "with buddies" even when it did
not exist in a location. :-)

>> Sandia Laboratories is different. But, I can't talk much about that
>> except that visit concerned things like SID.
>
> Ahhhhhhhhhh.......I see.
>
> Someone else suggests some "security" issues and you try to denigrate

>them for it.

SID is an acronym for Seismic Intrusion Devices.

RCA Corporation made a bunch of them for the "McNamara Wall"
in Vietnam, circa 1973-1975. Neat little automatic devices
reporting back (unattended) by radio to a "Portatale" (familiar
name) receiver. Could sense footfalls and had internal sound
processing to differentiate between four-footed and two-footed
creatures. Did the two antennas for them, accurate pattern
measurements on the first model, redesign to a "whip" type
for the second model.

That design is rather outdated now but SIDs are still used by
the government. I really don't know how much information is
still classified. What I've reported is from the public-release
information from Defense Electronics magazine.

Would make a cool variant on a super-tough-to-find "fox hunt"
transmitter. :-) Transmitter stays silent until the stalker
comes close. Sort of "role reversal" of the traditional game.
It would make for very accurate "fox hunt" scoring, though. :-)

> You think you're promoting your "insiderness" and you wave it like a
>flag.

Poor baby. Came all unglued for using an old acronym? :-(

tsk, tsk, tsk...all that "hostile action" stuff and never did any
Recon Marine intel patrolling?

>> No, not "rife." :-) If you are trying a larger vocabulary, try to get
>> something somewhat close to correct...and in context.
>
> Yes...rife was correct and in context.

"Rife: (adj) 1. Widespread 2. Abounding (as with error)"

Only in nursieworld where anything not according to nursie is
"rife." :-)

>> You are trying to "poison the well" by singling out only specific
>> instances of what I've mentioned as to experiences and work over
>> the last 51+ years.
>
> In other words, I hit the mark so close that you'll be dressing the
wounds
>from the "collateral damage" for days.

tsk, tsk, tsk...only in nursie's unhealthy imagination, still living
in the "hostile action" battlezone. :-)

Must be the post-traumatic stress disorder resulting from no
longer being issued a rifle to deal with "rife-ness."

>>> None of it has anything to do with Amateur Radio.
>>
>> Radio is radio, regardless of the differentiation that mere human
>> regulation makers make of its differences.
>
> Only in your mind, Lennie.

Hardly. :-) The FCC knows this, other nations' radio regulating
agencies know this, the rest of the radio world outside of olde-
tyme hum radio knows this, academic institutions teaching
physics knows this, etc., etc., etc.

Nursieworld is all by itself, "a dimension of sight and sound...
at the signpost up ahead...the Twilight Zone!" :-)

> If that assertion was so true, you'd have no basis for your OTHER rants
>that insist that Amateurs must spend thier time learning about "other" radio
>services.

First, amateurs ought to know "thier" own radios...something
beyond the front panel controls.

Amateur radios work by the same physics as other radios!

Sunnuvagun! A revelation to nursieworld!

> If "Radio is radio", your other assertions are baseless.

Nurise is "right" and everyone else is "wrong." :-)

Nursieworld still stuck in the Twilight Zone again. tsk, tsk.

>> The Pacific Stars & Stripes did not include a nice photo I made
>> of the MARS antenna newly installed at Hardy Barracks in
>> 1955.
>
> And they didn't use the pictures I had of the Loch Ness monster either,
>Lennie.

Nursie did an interview with Stars & Stripes?

Where, when, for the Sunday comics section?

[Stars & Stripes does have comic strips in case anyone wanted
to venture into nursieworld imagination]

>>> "Dictating" what you said?
>>
>> Absolutely. You are outraged that anyone dare confront your
>> ideas and fantasies with actual, real-life experiences. The same
>> with several others in here.
>
> Why is it that all those "others" are focused on YOU, Lennie?

"All?" :-) A few of the regulars in here who are of the same ilk
as nursie, wanting to fight to the bitter end to preserve and

protect olde-tyme hamme radio and manual telegraphy?

Wait for the next Sermon on the Antenna Mount...soon to be
preached by the good Rev.

> Perhaps YOU are the one with the perception problems?

I haven't gotten the rose-colored glasses yet. Don't use any
nursieworld kaleidoscopes...only oscilloscopes. :-)

> That's a rhetorical question, of course. With absolutely NO experience in
>Amateur Radio, we know you have no informed, valid expereicen from which to
>base your comments.

"Expereicen?" New word? From Newington?

Of course. Amateur radio is so vastly different from all other radio
that one must be licensed and experienced (and be tested in
manual telegraphy) to understand it. [according to nursie]

Nurise hasn't done jack in any other radio service, only amateur, so
that's her only basis. Oh wow, profound, that tunnel vision...

>> The dictatorial attitude is fairly common, done with heckling
>> and name-calling and general denigration in an effort to make
>> a poster stop writing. Weak intimidation. Works sometimes,
>> but is not a guarantee of suppressing truth and reality.
>
> And therein lies the bane of your existence...

"Bane (n) 1. ruin, death, harm, or their cause 2. poison"

So far, nursie is back on using quaint expressions involving all
that death and destruction.

Must be all that post-traumatic stress disorder from military
life again...?

> Still having a hard time wondering why your "superior intellect" can't
>squash all those "lesser beings" with your infinite wisdom.....

"Squash?" I'm not fond of squash. It's okay as food, but tasteless.

A more proper word would be 'quash.' Two meanings -

"Quash (vt) from the Latin 'cassus' To set aside (in law use)

"Quash (vt) from the Latin 'quatere' To quell as in an uprising."

[dictionary quoting a part of public service offered pro bono...]

> Too bad you can't objectively review what you just wrote against your
>conduct over the last several years.

tsk, tsk, tsk...confused on the differences between "objective" and
"subjective?"

The dictionary is your friend. Get acquainted.

Remember only nursie's alternate personalities live in nursieworld.
It's all subjective in there...

>>> No one in this forum has made any such assertion. Even those who
>>>staunchly support Morse Code testing have advocated advancement in the
>>>service.
>>
>> ...by more and more manual telegraphy use, praising its supposed
>> qualities, and generally getting into silly stuff about how it's so much
>> "better" than any other mode.
>>
>> Note use of the word "service" again.
>
> Hmmmmmm....The FCC uses it to describe Amateur Radio.

All throughout Title 47 Code of Federal Regulations, the term
"service" is a regulatory word pertaining to a type and kind of radio
activity being regulated.

"Service" has many meanings (the dictionary IS your friend and
you really need one).

Amateur radio is no more of a military or national purpose
"service" than Citizens Band Radio Service (Part 95, Title 47 C.F.R.).

No one "enlists" in the amateur radio service although some
actually do feel compelled to treat it like some military service!

> The Commissioners are not licensed Amateurs...Lord knows none of them
>hold ANY form of licensure by the FCC.
>
> YOU frequently point out the Commissioners status.

tsk, tsk, tsk...why are you stoutly maintaining that anyone "involved"
in amateur radio "must be licensed?" :-)

> Are you NOW telling us that the language used by those very same
>Commissioners is WRONG...?!?!

All throughout Title 47 Code of Federal Regulations, the term
"service" is a regulatory word pertaining to a type and kind of radio
activity being regulated.

>> Military surrogate use. Desire to make amateur radio much
>> more than it is by trying to identify a hobby with military service.
>
> That's YOUR schtick, Lennie.

? I've been a civilian for 44 years after receiving my honorable
discharge from the U.S. Army in 1960. [only one, honorable,
not typed in on any DD-214 which I received in 1956]

>> Tsk, tsk. Lost focus.
>
> Nope. Never have.

tsk, tsk, tsk...nursie keeps forgetting to take off the lens cap.

...and never loads any film. :-)

> Nope...It's right on. You make all sorts of assinine assertions about
>Amateur Radio in general and some Amateurs in particular, then can NEVER back
>up your assertions.
>
> You make assertions of fact.
>
> I want you to validate them.
>
> You never do. You CLAIM to be a "radio professional". You are not now
>nor ever were anything of the kind.

Do you need those documents verified by a notary public and
hand-delivered by bonded courier? :-)

tsk, tsk, tsk...I've given my short-form resume in here along with
living radio amateur references...and nursie never did check them
out, only issuing spiteful, hated nastygrams. :-)

"Professional (adj) Engaged in some sport or specific
occupation for pay."

[the dictionary can be your friend but nursie seems to want to fight
with everyone...]

> If you tried to pass off "credentials" like some hobbyist periodicals as
>"profesional publishing", you'd be laughed out of the IEEE.

Haven't been since first joining IEEE in 1973. One of my sponsors
was Jim Hall, KD6JG. :-)

["sunnavagun" as the super chief is fond of saying...:-)]

> The "shrinking ham advertising" was due to a lack of support of
>consumers.
>
> No consumers = no advertising monies = defunct.
>
> Corporate advertisers do not spend thier advertising monies where it is
>not netting a reasonable return.

You are close, but you've failed Business Economics 101.

The "shrinking ham advertising" is due to a lack of SPENDING
for advertising by manufacturers and services in periodicals.

Advertising is basically the same regardless of the product or
service. It is a means to induce potential buyers of a particular
product or service.

Most periodicals in the USA exist solely on the basis of advertising space sales income. When advertisers do not purchase advertising space in periodicals, that periodical has less revenue. [I hope you've understood that basic rule so far...] Note this carefully: The purchase of advertising space has little directly to do with "consumers." Some products and services can continue with an absolute minimal amount of advertising.

> If "Ham Radio" had been the marvel of publishing accomplishment you'd care
>to have us beleive, it would still be actively published instead of being
>polished and repackaged as a CD novelty.

HR existed for 22 years as an independent periodical, even spun off "Ham Radio Horizons." It started up as an independent, continued as an independent. No support was needed by any membership organization budget such as QST.

HR was considered the prime technical periodical for amateur radio by radio amateurs when it was in its 22 year span. That was stated by many, many radio amateurs.

>>> Even then I can't find a single example where any of your "work" was
>>>original, nor can I find any example of where your "contributions" were
>>>complimentary to the advancement of ANY radio communications discipline.
>>
>> Tsk, tsk, tsk. Having nursie as a critic is like having a blind
>> color coordinator for interior decoration. :-)
>>
>> Try to differentiate between "compliment" and "complement."
>
> In either use of either word, there is no professional historical
>documentation that would indicate that Leonard H. Anderson did anything other
>than sweep floors in ANY "aerospace" installation or facility.

tsk, tsk, tsk...personnel records of employees are not normally found in "professional historical documentation." :-) Those can be verified by personnel departments (now called "human resources").

> And as far as your "contributions" to Amateur Radio via your HR pieces, I
>find no occassion where your work was footnooted, included or otherwise madse
>part-and-parcel of any other paper or work.

"Footnoot?" "Madse?" :-)

> And I did look. Closely.

Total bullshit by nursie. :-) :-) :-)

On the other hand, maybe a sign of an impending vision problem.

Having to look closely at written text may be an indication that an eye examination is required, perhaps for corrective lenses. See

an opthalmologist or optometrist in addition to a mental therapist.

> Here's the full sentence: "I am only 'bitterly resentful' of
pathological
>liars who proactively seek to cause harm to Amateur Radio for no other
>purpsoe than to sate his own ego".

You'll hate yourself in the morning. :-) [every morning]

> You are a pathological liar, Lennie.
>
> You can't tell or acknowledge the truth. Your lying is habitual. Even
>when you DO quote or recite factual information, who can trust you?

Then how do you know anything I write is "factual" if everything
is a "lie?" :-)

Just another "meaningful discourse" nastygram from nursie.

> And you are not a "long time radio amateur". Never were, and God
>willing, never will be.

tsk, tsk, tsk...that's not the way to get a PR job with ARRL...:-)

> Expose. As if it took any effort to do...

tsk, tsk, tsk...remember the lens cap is still on and you didn't
load any film... :-)

> And if you didn't post such foolishness, I wouldn't have anything to
>work with. HARDLY "obsessed".

Your obsession was just admitted. Seek help with that disorder.

> Well, Lennie, I am neither "lay people", nor am I the "sicko" that you
>insinuate.

I didn't "insinuate." I stated it directly. You are obsessed with
trying to fight with newsgroup communicators who don't agree
with you. You defy social convention in acting the sociopath to
all who don't share your viewpoints.

That's a sick attitude to anyone, with or without "credentials."

Get help.

>
> I didn't say "ever", Your Wimpiness.

tsk, tsk, tsk. [lower-case comment as befits lower-case nursie]

>>> Your point?
>>
>> There's quite a bit of FREE information out there for anyone to
>> find out about military or government radio systems and
>> communications. Been there for a long time, even before the
>> Internet went public such as the SINCGARS.
>
> Great.
>
> Then all those Amateurs who ARE interested in military communications
>DON'T have to depend on QST, et al to discuss them.

...and nursie thinks amateur radio is exclusive, different from all
other radio. :-)

Did nursie ever bother to check out other radio services (other
than the CBs he saw shrink-wrapped at Wal-Mart)?

>> A QUARTER MILLION radio sets of one kind makes for some
>> future surplus market, doesn't it? [that's the most of any one
>> kind of radio system in government history...]
>
> Sure it does. And "surplus" radio gear has NOT been the preferred method
>of getting on the air by Amateurs for TWO DECADES....Not when folks can buy
>brand new, under warranty equipment for under $200.

Tsk, tsk, tsk. For a nearly-fifty "olde-tyme" hamme nursie sure
doesn't know much about surplus. :-)

>> If poor nursie is annoyed at not being spoon-fed enough info
>> through hum radio magazines, then he should not try to mean-
>> mouth those who know about such things. Tsk, tsk.
>
> Perhaps if you HAD been reading those Amateur magazines you'd understand
a
>bit more about what you are talking about.

tsk, tsk, tsk...nursie imagines others' worlds and doings instead
of finding out.

> But you go right on ahead, Lennie...

tsk, tsk, tsk...nursie getting on high horse again, forgetting which
end is head and which is tail. :-)

Nursie hasn't been able to stop many, despite his shouting,
hollering, cursing, and threatening. :-)

> Actually, my words then, as they are now, are that what I did in the
Armed
>Forces have nothing to do with Amateur Communications. Just like YOUR "link"
>with Amateur Radio, Lennie, those "happenings" only shared the theoretical
>basics of radio wave generation and propagation.

tsk, tsk, tsk...translated, nursie never did any military communications
at all (except maybe to use the day room telephone). :-)

Nursie was involved too much in those "hostile actions" in the
military. Must be the post-traumatic stress disorder thing showing
in his postings...

> It's the application...not the physics...that separates you from the rest
>of us, Sir Scummy.

tsk, tsk, tsk...more "meaningful discourse" from nursie? :-)

> Sucks to be you.

Only when I use either of the two Hoover appliances here. :-)

Or the solder-sucker on the bench. :-)

The melting point of solder is well below the temper temperature of nursie...easier to suck up melted solder than to put out the fires of outraged, angry egos such as nursie's... :-)

I guess this must be all of what modern U.S. amateur radio is about...a bunch of mad-as-hell extras berating all the "lower classes." Nice hobby. For Huns and other barbarians...?

Who is "Rev. Jimmie", Len?

> and I mention that
> the U.S. military quit using manual telegraphy for fixed-point
> communications in 1948.

They did? Everywhere?

Or did they simply start phasing it out in 1948?

And what about non-fixed-point communications, such as between ships?

> Now what kind of conclusion can we
> draw from that?

That you live in the past, Len. You've mentioned your ADA experience here many,
many times. How there were so many high powered transmitters, all kinds of RATT
systems, millions of messages, etc. And no Morse Code in use. ;-)

That's fine, we're all happy for ya. And the 700+ personnel who were also there
when you were. But what does it have to do with ham radio?

> Oh, yes, my mention is "wrong" since it fails to honor and
> glorify the tradition of morse code in amateurism which must,
> in the Belief system of Rev. you-know-who, be preserved
> forever and ever in amateur radio regulations.

Not at all. It's just completely irrelevant to amateur radio policy.
>
> Okay, any positive statements about morse code are allowed

> and even honored even though some of the individuals involved
> are obviously fish stories.

"some of the individuals involved are obviously fish stories."??

What does that mean?

> Those against morse code are evil,
> wicked, mean, and nasty, are always incorrect and should never
> be considered. :-)

Why should anyone be "against morse code"?

> So, some olde-tyme hamme can say he "shot bears for navel
> intelligence" and that be okay. Navel intel is fine as long as
> person is for morse code.

Do you mean the pictures taken by W3RV? Guess what - they're real. Like it or not, civilian contractors do go out on US Navy ships. And they do see - and photograph - some pretty unusual stuff.

Of course such activities are also irrelevant to amateur radio policy.
>

No.

I think/hope what will really kill BPL is economics. It simply won't be able to
compete with DSL, cable and other technologies.

Soiling the environment is first nature for Steve, kind of like him
calling out cadence while he walks to the mail box.

So many times in history, Ideology has chosen to ignore everything but that ideology's belief. That is one of the reasons that idealogs hate science.

As absurd as it may seem, the BPL push is part of current ideology. As such, as long as the current ideology is in place, BPL WILL HAPPEN! Once it comes up against science and laws of nature, as well as the marketplace, it will quite simply fail.

Ditto the number of active hams hamming it up for WWII [exactly zero
(0)]. But that does not stop some from revering the contributions
that hams hamming it up made in WWII [exactly zero (0)].

BTW, did you know that a Morse Exam acts as a disincentive to CW use
on HF?

And that MARS >>>IS<<< Amateur Radio?

Hi, hi.

These guys keep getting sillier and sillier.

I don't know current QRO, but in the 70's the COMSUBLANT transmitter at Cutler was 1,700,000W on 15.9KHz and the COMSUBPAC transmitter at Jim Creek was 2,200,000W on 17.1KHz. The ELF site at Clam Lake is reportedly engineered for just under 1,000,000,000W at somewhere just above powerline QRG, 75Hz if I remember correctly. The antenna is just under 29 miles long.

Sad to say, BPL (and PLC) already happened. Three areas now and
a fourth coming on-line soon in the USA.

According to NTIA and that wonderful Michael Gallagher (Asst.
something or other there) praising the snit out of BPL, BPL offers
some wonderful things ahead -

1. Powerline noise will actually DROP as a result of installing BPL
since untilies must fix that in order for BPL to get data through!

2. Existing BPL systems 'merely' raise the HF noise floor the
small amount of 10 db. Not a problem says them in Phase
2 study.

3. President Bush (the younger) says "the country needs BPL"
and the party faithfull followers reprise that throwaway mantra.
Ergo, if da Prez say 'we' need it, then 'we' need it. End msg.

"Idealogues?" Nah. "Take-the-lobbyist-handout-monies-and-run-logues."

Don't worry about any HF receiver sensitivity values in the future. Won't matter. Noise floor will have moved up 10 db and a Noise Factor of 20+ in a front end will do the job in that hash.

I get a kick out of the "patriots" who never served in our military
making all kinds of big, important noises about "the war effort!"

Jimmie wants to support Katapult Kellie and his shooting bears
for naval intelligence...so he loves to pick on those who served
rather close to USSR territory.

Never mind that a major area headquarters had all kinds of radio
communications running 24/7 to the States and elsewhere or
that Joe had The Bomb or that the Cold War was anything but
cold in the fifties and sixties. Jimmie gotta drag out one of the
Jane's books and Lecture all about USSR aircraft instead. Like
Jimmie spent a lot of time on the flight line, of course. :-(

Then Jimmie is working up to a hissy-fit asking "who's Rev.
Jim?" After several Sermons on the Antenna Mount, he
doesn't know?!?

Heck, he may be doing a Gibson for a religious picture, drumming
up support?

[Hoot Gibson, not Mel...]

>BTW, did you know that a Morse Exam acts as a disincentive to CW use
>on HF?

I'd heard that. :-)

Along with manual telegraphy skills are the epitome of excellence,
the heart and soul of U.S. amateur radio and "morse code is fast."

>And that MARS >>>IS<<< Amateur Radio?
>
>Hi, hi.
>
>These guys keep getting sillier and sillier.

Could be too much RF exposure? [or the UHF connector got
put into the wrong receptacle?}

All I bothered to mention was that the old military phonetic
alphabet ("able, baker, charlie") got replaced with the NATO
phonetic alphabet ("alpha, bravo, charlie") in 1955...my next
to the last year of active duty in the U.S. Army.

Jimmie wants to rehash old, old arguments in this newsgroup
rather than focus on the reality of now. I guess he figures that
repeating the old stuff over and over might allow him to "win"
one of the arguments...like watching re-runs of "Wheel of
Fortune" and hoping some contestant will guess diffeently and
win more...

Silly. Yeah.

Yep.

They also choose to ignore the past, which is why they also hate history. You see this in their cries of "Luddite" and "we're in a new era now" and "stop living in the past".

>As absurd as it may seem, the BPL push is part of current ideology.

Part of *some people's* current ideology.

And it may be more of a question of expediency than ideology.

The recent boom-dot-bust mess hit a lot of folks hard. While the economy slowly recovers and unemployment drops, a lot of good (read "manufacturing jobs with decent pay and benefits") jobs are being replaced by "service economy" jobs (read "do you want fries with that?").

With the election only months away, the incumbents want to be seen as doing and supporting things that will result in more "good" jobs and start another technoboom. The reality won't hit for at least a year, at which time it can be blamed on the "liberals" and the "antenna huggers" and such.

>As
>such, as long as the current ideology is in place, BPL WILL HAPPEN!

It's already in service at a few sites. The direct result of people wanting "less regulation" and "get the government off our backs".

>Once
>it comes up against science and laws of nature, as well as the
>marketplace, it will quite simply fail.
>
I hope so.

Very interesting.

I note only one MARS callsign there, and it's NOT a facility callsign.
Rather it's one assigned to an individual (read that "licensed Amateur").

Guess all those "professional" MARS operators were taking a break.

I am curious about the German callsign that John attributes to being in
Washington state? A typo...?!?!

I see at least one reference to a Civil Air Patrol station.

I DON'T see ANY reference to any Part 15 or other unlicensed devices being
employed or reported. Nor do I see any PLMRS, GMRS, or MURS systems. (Certain
posters here insist they play a "major" role in "emergency comms"...Guess they
will be in the NEXT exercise...?!?!

>Or did they simply start phasing it out in 1948?
>
>And what about non-fixed-point communications, such as between ships?

I guess we can throw out as "irrelevent" the fact that there has been
rather thorough documentation of the Armed Forces' use of "manual telegraphy"
for routine communications right up to the 80's....And NOT "spoon fed by ARRL
publications".

Of course those are FACTS, and facts don't sit well with one who can't
stand the truth.

>> Okay, any positive statements about morse code are allowed
>> and even honored even though some of the individuals involved
>> are obviously fish stories.
>
>"some of the individuals involved are obviously fish stories."??
>
>What does that mean?

It means that if it ruins one of Lennie's rants it but be a fish story.

>> Those against morse code are evil,
>> wicked, mean, and nasty, are always incorrect and should never
>> be considered. :-)
>
>Why should anyone be "against morse code"?

Becasue to be "for" Morse Code is to be AGAINST Lennie...Can't have that
now!

>> So, some olde-tyme hamme can say he "shot bears for navel
>> intelligence" and that be okay. Navel intel is fine as long as

>> person is for morse code.
>
>Do you mean the pictures taken by W3RV? Guess what - they're real. Like it or
>not, civilian contractors do go out on US Navy ships. And they do see - and
>photograph - some pretty unusual stuff.

Once again Lennie displays his colors with the "olde tyme hamme"
reference.

>>>> He MUST keep on
>>>> fighting the good fight over ancient postings, again and again and
>>>> again and again and...<yawn>
>>>
>>>You mean the like the one where you called another poster a "feldwebel" and
>>>told him to "shut the hell up"?
>>
>> Right.
>
>Do you think it's OK to tell someone else in a newsgroup to "shut up", Len?

Obviously he does. He does it frequently. Usually when he's got his tail
caught under yet another rocking chair, which is pretty frequently these days!

>> The ROE of this newsgroup is:
>>
>> 1. Any kind of language or lack of civility by any morse code
>> proponent is perfectly acceptible, even encouraged.
>
>No it isn't.

No more or no less than the use of blatant profanity by allegedly college
educated, "professional" engineers who are "against" Morse Code.

>> 2. Anything said by anyone who does not love, honor, cherish
>> morse code is to be denigrated, insulted, vilified, and looked
>> at nasty just because of what they think.
>
>Not at all.

No more or less than the insistence by certain alleged "professionals"
that Amateurs show awe and reverence to them as our "superiors"...Recent
suggestions by one of those alleged professionals that some in this forum are
"jealous" or otherwise despise them for BEING an (alleged) engineer is a prime
example.

>> All of those sub-
>> humans must always behave civilly and show respect for the
>> code lovers even if the code lovers are behaving as iceholes.
>>
>> That pretty well sums it up.
>>
>Really?

Again with the inference of profanity.

Some professional.

>> Rev. Jimmie, go back to Google where you live...
>>
>WHO is "Rev. Jimmie", Len?

Sheeesh, Jim...You don't expect Lennie will ever live up to his own rhetoric and treat others in the same way he demands that HE be treated...even when you ARE treating him the way he expects...?!?!

Almost seven years now and I STILL have yet to see him do as he professes or what he says he will do.

And I take the "...go back to Google" remark to be yet another "shut up" by someone who can't stand being made a fool of with his own words....Again.

>for the people,
>not the rich corporations!

And replace him with who? John Kerry? A guy who sat side-by-side with
this Nation's disgrace, Jane "Hanoi" Fonda...?!?!

Both of whom "support the troops" by making public statements that give
aid and comfort to this Nation's foes WHILE we are in conflict with them...?!?!

George Bush is not the most eloquent speaker and like any other Human
Being, doesn't always get things right...But he's a man of TRUE moral
conviction and honesty. Replacing him with a creep like Kerry would be a
travesty and would send the wrong message to the World.

This country got rid of one lying, deceiving creep and narrowly avoided
electing another.

>
>100% of nothing is zero (0). I sent out a few more than one (1) QSL card.

That you may have sent out "QSL" cards is not at issue. That you sent out
QSL cards confirming your activites from Somalia are.

What IS at issue is the validity of the operation (it wasn't) and whom you
may have had QSO's with (you refuse to state).

So far, you've not provided us with anything more than a claim that you
operated from Somalia.

Even if you DID "operate" from Somalia, from your own words in THIS forum
it's apparent that you did not have legal sanction to do what you allege to
ahve done, ergo the cards are invalid for ANY purpose other than a keepsake.

No Proof = Didn't Happen.

Don't forget, the requirements for DXCC are far more stringent than those of mere legality. I have seen threads before where people have argued past oneanother on this point, i.e. one of them has used the term 'legal' when they were really talking about DXCC eligibility, a big mistake.

For example, operation without the permission of the owner of the land or building is not valid for DXCC, but it is seldom illegal. More to the point in this case, perhaps(?), operation from a war zone is legal with permission of whoever appears to be in control, but good luck getting it approved for DXCC.

It would seem prudent to have the ARRL petition the FCC to raise amateur power limits to partially recover that lost 10 dB. I think perhaps a 10 kw limit would be close enough. It might also make BPL communications a bit dicey too ;)

Seriously, however, it is going to be interesting when BPL lines are found adjacent to an active amateurs' property. BPL *will* be affected by rf. Fire up your gallons.

> And replace him with who? John Kerry?

Why not?

>A guy who sat side-by-side with
>this Nation's disgrace, Jane "Hanoi" Fonda...?!?!

When did John Kerry sit side-by-side with Hanoi Jane?

And if such proximity disqualifies someone, how about Donald Rumsfeld shaking hands with, and warmly greeting, Saddam Hussein? How about the blind eye the Reagan Administration turned to SH's chemical warfare against the Kurds?
>
>Both of whom "support the troops" by making public statements that give
>aid and comfort to this Nation's foes WHILE we are in conflict with
>them...?!?!

Hanoi Jane's treasonous actions (not just words) are well documented (see www.snopes.com).

What actions of John Kerry do you refer to? He's a decorated veteran who served in Vietnam, then came back to the USA and opposed that war.

Was he wrong to follow his conscience in doing so? Is anyone who speaks out against a war - any war - automatically wrong?

Consider this, Steve: During WW2, FDR (a Democrat) ran for reelection in 1944, in the middle of the biggest armed conflict the world has ever seen - or hopefully ever will see. Yet the Republicans nominated someone to run against him. Was that giving "aid and comfort to this Nation's foes WHILE we are in conflict with them...?!?!"

Or how about when Richard Nixon (a Republican) ran for reelection in 1972, during the very war Mr. Kerry fought in. Mr. Nixon had won in 1968, in part on a platform that involved a "secret plan to end the war" - which was still going on 4 years later. The Democrats nominated George McGovern to run against him. Were either the 1968 or1972 campaigns giving "aid and comfort to this Nation's foes WHILE we are in conflict with them...?!?!"

> George Bush is not the most eloquent speaker and like any other Human
>Being, doesn't always get things right...But he's a man of TRUE moral
>conviction and honesty.

How do you know?

He told us that SH had weapons of mass destruction. He told us that there were solid links between the 9-11 terrorism organizations and SH's regime. Yet up to now *no* credible evidence has been provided to back up those claims - in fact, just the opposite has surfaced.

This doesn't mean Mr. Bush is dishonest. He may have just been mistaken or misled.

>Replacing him with a creep like Kerry would be a
>travesty and would send the wrong message to the World.

What message do you wish to send? That the USA will back its leaders no matter what? That the supply of oil is so important that we will look the other way while our suppliers do almost anything?

>This country got rid of one lying, deceiving creep and narrowly avoided
>electing another.

There's no shortage of those - on either side of the aisle.

I'm not saying Mr. K is any better or worse than Mr. B. What I *am* saying is that blind acceptance of any leader's pronouncements leads to trouble. And that condemning someone because of who they allegedly sat next to 30 years ago would lead to a lot of people being condemned...

Steve doesn't know what he thinks. One minute, just to disagree with
you he says one thing, another minute, just to disagree with Hans, he
says something else. Such as this little gem:

"Sorry Hans, MARS >>>IS<<< Amateur Radio."

> Did nursie ever bother to check out other radio services (other
> than the CBs he saw shrink-wrapped at Wal-Mart)?

But, but, but... He saw some radios in an EMS van, and he saw some
radios in a police car. But he most liked to run the siren and
blinking lights as they make him convulse.

> >> A QUARTER MILLION radio sets of one kind makes for some

Very simple reason why not. According to liberals, cheap internet access (remember it was Gore who "invented the internet" according to his own statements) is a right so Kerry could be expected to push BPL even harder than Bush. After all the government should decide what is best for everyone and amateurs are too small a minority to watch out for. Economic reality be damned as far as the liberals are concerned. At least the "rich corporations" will, if BPL is not economical, kill it instead of sinking money into it. After all they want to stay rich.

To really make any inroads in the market, BPL will need to be as cheap as dialup and as fast and reliable as cable modem. I find it hard to believe this combination will happen. The investment is too large. Those who are willing to pay the price for high speed access have already switched to DSL or cable, etc. Even they are fighting to get people to leave dialup but it

is the price that people generally put ahead of speed.

> I am curious about the German callsign that John attributes to being in
>Washington state? A typo...?!?!

I presume you're referring to DLA303. Bear in mind that this was logged in reference to a SHARES exercise in support of GRECIAN FIREBOLT 2004. DLA303 is one of ten Defense Logistics Agency (DLA) sites that participate in SHARES. DLA303 is the site in Bremerton, Washington, which also serves as SHARES Coordination Station Northwest. They have HF voice and ALE as well as digital capabilities to support the SHARES BBS (PACTOR). DLA303 is the SHARES registered callsign for this facility, and is similar to tactical callsigns used by hams during ARES/RACES events.

The difference, of course, is that DLA sites are "licensed" by NTIA, not FCC, and thus operate under different rules than we do as regards station identification. They're under no requirement to identify using their NTIA-assigned callsign. DLA303 obviously is not their NTIA-issued callsign, since NTIA does follow a callsign allocation plan that conforms to ITU standards.

As far as I know, all ten of the DLA sites in SHARES use DLA ### calls (DLA303, DLA302, etc.) rather than their NTIA-issued callsigns. The DLA obviouly identifies it as a Defense Logistics Agency site. Wher the numerical part of the call comes from, I have no idea.

> I see at least one reference to a Civil Air Patrol station.

Yep - Puerto Rico CAP is their correct State Wing callsign. Like Florida CAP where you are, or WHITE PEAK where I am.

>posters here insist they play a "major" role in "emergency comms"...Guess they
>will be in the NEXT exercise...?!?!

In all fairness, the frequencies posted were in relation to a military exercise and to an exercise of a radio net oprated by the civilian government in support of said military exercise. This is far removed from the type of "emergency comms" in which GMRS, MURS, FRS, and Amateur stations would be involved.

In fact, GMRS, MURS, and ham stations have no more business checking into a SHARES net than they would have coming up on the military aircraft band and trying to raise Air Force One for a ragchew. However, all of them (along with CB, marine VHF, and any other radio

on which it is possible to establish communications with another station) are of potential value in emergency situations. This is especially true of CB, MURS, and FRS equipment when it is desirable to be able to directly contact by radio individuals who are not licensed in one of the other radio services such as GMRS or the ARS.

The emergency management department in Niagara County, NY keeps several GMRS/FRS portables on hand with just that in mind - which I did not know until the deputy commissioner of emergency management personally handed me one during an activation last year so that he could contact me directly when he wanted to do so.

This is not to say that regular users of GMRS, MURS, FRS, etc. are routinely written into contingency planning for communications during disasters, but the equipment used in those services most certainly can and is routinely procured by emergency management agencies for use during disasters.

>
> Dee D. Flint, N8UZE
>

Dee,

My guess is that the investment costs will be reflected in power bills that we *have* to pay. Of course, large corporations will get breaks on these rates. Many utilities now charge an "access" fee so they can charge "lower" rates. This means that while my bill states a bit over 8 cents per kilowatt hour, I actually pay close to 13 cents per kilowatt hour. Meanwhile, folks in Fairport and Spencerport pay something like 3.5 or 4 cents per kilowatt hour.

All of this welfare to the wealthy (make 50 grand a year and you may well pay higher taxes than someone making a million a year - they aren't paying Social Insecurity, plus you have "unearned" income, capital gains ...) is slowly bringing this country down.

I am frankly tired of folks blaming "liberals", which, loosely defined is not agreeing with everything the Repooblican party says is gospel. It appears one cannot even be moderate without being called a card-carrying liberal. The last time *everyone* followed a leader without question led up to WWII.

Watch who pays for the infrastructure of BPL. Oh, the operating costs will be paid by the BPL users (assuming it succeeds), but stand by for who will pay the initial costs.

Best regards from Rochester, NY

Whoa, hold it right there!

Show us where Algore actually claimed to have "invented the internet".

What he *did* claim, and rightfully so, is to have had a role in enacting the
legislation that made it possible. The record shows that to be a valid claim.

> is a right so Kerry could be expected to push BPL even harder
>than Bush.

OTOH, the "liberals" (a term never well defined) are big on environmental protection, resource conservation and pollution reduction. Since BPL pollutes the RF spectrum (a limited natural resource), it makes sense they would be *against* BPL.

>After all the government should decide what is best for everyone
>and amateurs are too small a minority to watch out for.

Isn't a major role of government that of protecting the minority?

>Economic reality be
>damned as far as the liberals are concerned.

Really?

What's the economic reality of BPL?

>At least the "rich
>corporations" will, if BPL is not economical, kill it instead of sinking
>money into it. After all they want to stay rich.

Is that how the oil industry works? Or the auto industry?
>
>To really make any inroads in the market, BPL will need to be as cheap as
>dialup and as fast and reliable as cable modem. I find it hard to believe
>this combination will happen.

Me too.

It also needs to be compatible. Take your DSL system anywhere in the US, and the hardware still works. That's not true of BPL.

>The investment is too large. Those who are
>willing to pay the price for high speed access have already switched to DSL
>or cable, etc. Even they are fighting to get people to leave dialup but it
>is the price that people generally put ahead of speed.

All true. In addition, the areas served by those nonspectrumpolluting technologies keeps growing and growing. Here in Radnor, PA, we can get dialup, DSL and/or cable service - not to mention satellite.

Then there's the whole issue of wireless access.

73 de Jim, N2EY

>in this case, perhaps(?), operation from a war zone is legal with
>permission of whoever appears to be in control, but good luck getting it
>approved for DXCC.

Alun, if there be some etymology of that thread, no "DXCC" was
involved. No contesting at all was involved.

It began when Heil made some chance remark about "working
Frenchmen on 6m out of band." Brian Burke tossed that one
back to him with some mild ascerbicity which caused Heil to
go bananas. Nursie got out his rusty bayonet, locked and
loaded, and made like the Charge of Lite Brigade (which led
into the Valley of Death of his of today).

Nursie never got to Somalia, certainly not to any "hostile action"
there (or anyplace else with any proof) but Brian Burke did.
Brian earlier had made a chance remark about operating from
there on ham frequencies, getting permission from his
commanding officer. That resulted in a long, overdrawn word
battle and flame war with Heil who was resentful (to the max)
of anyone having the temerity to toss him a rejoinder. Nursie
jumped in on that with usual diss-and-cuss, trying to make
like a legal eagle with smarts instead of the hummingbird
with dumbth.

The PCTA of this newsgrope all seem to be self-righteous,
prissy puritans of perfection who will explode with outrage at
the slightest provocation of their beloved manual telegraphy
as being anything less than the ultimate skill of amateurs.

It's almost as Henry Ford put it on the color of the Model T:
"You can have any opinion you want, so long as its pro-
code."

That's the "new" freedom of speech in here. Enjoy.

>
> No Proof = Didn't Happen.

Poor nursie. Kills a horse, then keeps trying to kill it all over again. The beat goes on...

Nursie said he was in "hostile actions" during his military days. Doesn't give ANY details on it, no when, no where.

Nursie claims his "DD-214" says he got an "honorable discharge" (not a medical) even though a DD-214 is a Release from Active Duty and NOT a discharge paper.

Nursie has made numerous general claims in here without presenting one bit of proof or names of persons who could verify his general claims.

"No Proof = Didn't Happen."

Under the Rules of Engagement in here, all PCTAs can say they do or have done anything and it is "the absolute truth." All NCTAs have to present proof, give names of references, file notarized legal papers, and probably publish it in the Newington press...and all that will be thoroughly dissed-and-cussed for years in here by the PCTA.

NCTAs can give government document references having full public access specifically about a specific matter and some PCTAs will still deny that such is proof. Hence -

"Sorry, Hans, MARS >>IS<< amateur radio."

Quod Erat Demonstrandum.

Temper fry...

>
> You made this up, right?

No, nursie, Brian is correct.

The U.S. government stopped amateur radio transmissions
during WW2. Really. It was in all the ham magazines and
everything. Didn't you see it?

> More over, do you BELIEVE what you wrote? I ask because there is more
>than a small amount of evidence to the contrary.

I don't think Brian is old enough to be alive during WW2, but
I was and I believe the U.S. government shut down amateur
radio transmitting during WW2.

Even the ARRL acknowledges that. Really!

>>BTW, did you know that a Morse Exam acts as a disincentive to CW use
>>on HF?
>>
>>And that MARS >>>IS<<< Amateur Radio?
>>
>>Hi, hi.
>>
>>These guys keep getting sillier and sillier.
>
> Kinda like "Unlicensed devices play a major role in "emergency
>comms"...?!?!

No, more like "CW gets through when nothing else will..."

Or, that morse testing has to continue for "traditional"
reasons (and because olde-tyme hammes are pished
out and insist all newcomers have to "work as hard" as
they did...because).

It might also be about 26 patents when only 1 exists or shooting bears from an aircraft carrier or some Chesty Puller wanna-be saying "I was in seven hostile actions" and never revealing the When or Where of those. It could also be those old-tyme hammes who made big noises about "I design and build my own ham radios" who, a few days later would talk a lot about his latest Kit project.

Of course, those same individuals have to misdirect a thread into their oh-so-very-important-personal-battles in order to diss-and-cuss those of opposite opinions.

This thread started out about Phonetic Alphabets. The "Able, Baker, Charlie..." U.S. phonetic alphabet is familiar to me because I learned it and used it in the U.S. Army. That set was replaced by the NATO phonetic alphabet ("Alpha, Bravo..") adopted in 1955. I am familiar with that since I was IN the U.S. Army at that time, learned it and used it in military communications. That's unalterable fact despite what those weren't born then or mere infants at the time say.

The NATO phonetic alphabet was adopted by the International Civil Aviation Organization shortly after the U.S. military adopted it. Some in here want to argue and argue that phonetic alphabet is called the "ICAO phonetic alphabet." That's rather petty. NATO had it first. That's unalterable fact. All the aggressive argumentation going on in here seems to be little more than a disguise to diss-and-cuss certain personalities, certainly not the subject matter.

And what might those "documentation" be, big-time military communicator?

It couldn't be DoD Directive 4650.2 (eff. 21 Nov 03) because nursie sure as heck doesn't understand that.

How about all the alleged uses in Vietnam, 1962 through 1970, as documented on the U.S. Army Center for Military History website? Can't be that one, nursie never saw it, let alone read it.

How about Field Manual FM 24-24, December 1994, the index of Signal Equipment? [available at the Gen. Dennis J. Reimer digital library, public distribution, even linked-to by several ham websites] It has all the land forces signal equipment in there, but, alas, no code keys. Tsk, tsk.

How about "From Flares To Satellites," a USAF history document available for public download from the USAF Communications Agency website (public distribution also, but large at ~14 MB but has pictures for those who can't understand words with more than

two capitalized letters such as "CW")?

Sunnuvagun! Not a single one of those predates the 1990s!

Must be a Big Conspiracy to "hide CW from the masses?"

Riiiight...the motion picture "Independence Day" showed us all
the REAL truth where "CW" is used to defeat alien space
invaders!!!!

> Of course those are FACTS, and facts don't sit well with one who can't
>stand the truth.

Riiiiiight. In nursieland there be only "FACTS" put there by nursie.

>>> Okay, any positive statements about morse code are allowed
>>> and even honored even though some of the individuals involved
>>> are obviously fish stories.

>>> humans must always behave civilly and show respect for the
>>> code lovers even if the code lovers are behaving as iceholes.
>>>
>>> That pretty well sums it up.
>>>
>>Really?
>
> Again with the inference of profanity.
>
> Some professional.

"Icehole" is profane? Nursie insulting Minnesotans' big winter
sport locations? Tsk, tsk, tsk.

Well, maybe I should have split it into two words?

Ya know, like "Nursie is an ice hole."

Sound better?

>>> Rev. Jimmie, go back to Google where you live...
>>>
>>WHO is "Rev. Jimmie", Len?
>
> Sheeesh, Jim...You don't expect Lennie will ever live up to his own
>rhetoric and treat others in the same way he demands that HE be
>treated...even when you ARE treating him the way he expects...?!?!

Yup, Maude, sissie still got the hissy-fits...

> Almost seven years now and I STILL have yet to see him do as he
>professes or what he says he will do.

Well, I admit that trying to change the FCC's mind on eliminating
the morse code test from U.S. amateur radio licensing IS a
long, hard task. Been at that since 1988. Sooner or later, that
WILL happen... :-)

Yes, I did officially retire in 1997 and I AM enjoying that, as I said I would. :-)

This project of inventing anti-gravity IS VERY DIFFICULT.
Not going at all as good as I expected. Something is holding me down...

Temper fry...

>On the basis of a whole pattern of your errors, I point them out. ;-)

Sounds like nursie after the remedial English classes.

"WHOLE *PATTERN* OF ERRORS!!!"

:-)

Billions and billions served? Tsk, tsk, tsk...

Rev. Jimmie Who mounts the antenna and transmits a Sermon.

Meanwhile, I thought this thread to be about Phonetic Alphabets.

Must be the "new" English.

It's really about some angry extra trying to get even for losing
arguments in here years ago.

Yawn.

Rev. Jimmie Who is very predictable in that he WILL bring up old arguments time and again.

We readers aren't sure exactly WHAT will be brought up and WHEN...and that lends a bit of suspense to the proceedings.

Okay, so Rev. Jimmie Who says this thread is "not" about phonetic alphabets.

In that case, "Able Baker Charlie" (in the subject field) must be about some skilled baker with the given name of Charles.

THAT doesn't have much to do with amateur radio, let alone amateur radio policy, does it?

Rev. Jimmie Who, you are becoming more cryptic every day.

Reminder: FCC sayeth amateur communications must not contain encryption or anything intended to obscure meanings.

The 'mean' of "meanings" is obscured, but still visible.

So...tell us about YOUR days in military communications?

Or civilian communications (other than amateur)?

Nursie should not be sending so many nastygrams.

That only reinforces the already-perceived-by-readers of her "Antichrist" character.

Neither is your posting any of the "meaningful discourse" you desire. You don't "discourse" when you diss and cuss.

>> I guess this must be all of what modern U.S. amateur radio is
>> about...a bunch of mad-as-hell extras berating all the "lower
>> classes." Nice hobby. For Huns and other barbarians...?

Are you saying "byt" me?

> Sucks to be you...again.

Tsk, tsk, tsk...not only dissing and cussing, but very bad sentence structure. Try some remedial English classes. During the day since you abhor night classes. It would make a remarkable difference in improving your written communications.

Temper fry...

>will be in the NEXT exercise...?!?!

Why would unintentional emitters or very short-range emitters (Part 15) be used in medium-range communications? Doesn't make logical sense.

Personal communications devices (unlicensed, Part 95) CAN be used in such exercises, but for local use. Since they are unlicensed, there isn't much need for all the reporting of those, is there?

PLMRS (Public Land Mobile Radio Service) is licensed but most of that is for local civilian use such as by utilities and businesses and local city-to-state government communications. As far as PLMRS involved in emergency communications, they most certainly are and have been used so for over a decade. PLMRS was used by local governments and utilities over 10 years ago here for the 17 Jan 94 Northridge Earthquake emergency.

The Grecian Firebolt exercises are intended for GOVERNMENT use for emergency preparedness. Government takes those things seriously even though amateurs think they know more and better on everything.

You need some more study on which Parts of Title 47 C.F.R. apply to what civilian radio services. Then a lot more study on preparation of radio communications stations beyond what you've read in QST for winning radio contests.

Good luck on that...

I will take a look...

Interesting thing about that name "John Anderson" - reminded me of the 3rd party candidate who helped defeat Carter in 1980.

One of the biggest reasons we got 8 years of Bill Clinton is that Ross Perot divided the anti-Clinton voters. And he did the the same trick twice!

Then in 2000, the shoe was on the other foot. Ralph Nader, the latter-day Harold Stassen, divided the anti-Bush voters enough so that Algore didn't win. (Exit polls of Nader voters showed that if Nader had dropped out of the race, about half of his support would have gone to Gore, a quarter to Bush and the rest would have either stayed home or voted for other 3rd party candidates.) The difference was enough that close states like Florida would have not been close at all. Gore would have won decisively.

So we have the amazing irony that the author of "Unsafe At Any Speed" and lifelong critic of Big Business was the key factor in putting a Texas oilman in the White House.

And he may do the same trick again.

Kerry is a chronic apologist. He will do nothing when this country is attacked but wring his hands, say "Oh, we're sorry, did something we do/say offend you?...P L E A S E forgive us"

Having been in the apologist-era Armed Forces of the late 70's, it is my freverent hope that we DON'T allow ourselve to regress to that stage, which is exactly what I fear will happen with this candidate.

Carter tried to castrate the Armed Forces in the 70's.

Bill Clinton didn't try to castrate them...he just made it possible for other guys to play with them....Oh yeah...he let a bunch of ragheads drag some of our guys through the streets of Mogandishu and them rewarded them by doing exactly what they wanted us to do.

Kerry? He IS bad news and he'll continue to be bad news. He's already angry that the Republicans have done exactly what they said they'd do, and it's an embarrassment to Democrats.

Clinton and his bunch tried to make the economy look good with smoke and mirrors, and as soon as he was no longer in office and able to hold the mirrors up, the true nature of his economics became apparent.

Bush Jr, just like his dad and President Reagan before him, have publically stated that economic recovery, if it is to remain viable, is a slow and steady process. They were right.

Kerry will be more of the same "Tax 'Em To The Bone Then Flash Them With Great Entitlement Programs Made With Thier Own Money".

We don't need Kerry. John Edwards had a chance...he just didn't bark as loud as Kerry. Too bad.

Steve, K4YZ

Har, I forgot about that, you did see some of those shots I took
didn't ya? Geez that pile of old photos was a real trip back huh?
Gotta love the way the Putz has twisted 'em into "Naval intel" BS. No
such thing, they were typical on-the-road personal unclassified
snapshots and I never claimed otherwise.

I wasn't a contractor, I was a direct employee of the U.S. Department
of Defense and an offical civilian guest of the skipper while I was
aboard. The Putz never managed to be either, his types did my drudge
work for me for cheap.
Steerage dwellers.

Well keep in mind that the utility companies will have to go before the
state's public utilities commision and get their approval to raise electric
rates to pay for internet. This could be a hard sell.

> All of this welfare to the wealthy (make 50 grand a year and you may well

That's OK. I'm just as tired of folks blaming "conservatives" for the world's ills. It cuts both ways. Both groups have had good ideas and bad ideas.

> Watch who pays for the infrastructure of BPL. Oh, the operating costs
will
> be paid by the BPL users (assuming it succeeds), but stand by for who will
> pay the initial costs.
>
>

Again they will have to have the approval of the state's public utility commission and this could be difficult in some states. Just as people are unwilling to step up to the cost of cable modems, etc for high speed access, they will be just as irate or even more irate at proposals to increase electric rates.

In article <e1lBc.3208$ph6.1562@news01.roc.ny>, "Jim Hampton"
<aa2qa@frontiernet.net> writes:

>It would seem prudent to have the ARRL petition the FCC to raise amateur
>power limits to partially recover that lost 10 dB. I think perhaps a 10 kw
>limit would be close enough. It might also make BPL communications a bit
>dicey too ;)

Har! :-) :-) :-)

I was totally flabbergasted at reading the Phase 2 report. They
boldly went where no technical person dared to go in saying
"BPL will 'improve' the electric power line noise problems!"

As of the end of the business day on Friday, 18 June 2004, the
Comment numbers in the FCC ECFS were -

docket 04-37 (NPRM) 1,399
docket 03-104 (NOI) 6,076

There's lots of more-than-one-page real technical problem
presentations there showing that Access BPL is full of snit
than there are for the BPL proponents. I don't think that will
matter much.

The writing seemed clear on the wall last year. BPL *will*
be started. The business folks are geared up for profits.
The President has made both BPL and Broadband a goal.
The good little Republican syncophants are synchronized
to The Word from on high.

It doesn't matter who wins a majority in the General Election.
BPL has started to deploy. Once it is IN, it becomes
legacy. Once the initial costs are taken care of, it is in the
regular profit time and the installers will fight tooth and nail
to keep it. The worm could turn.

With a legacy-status "utility" the BPLers could gain leverage
to actually STOP or cut down on all those nasty interfering
HF emitters...like amateur radio transmitters. Unknown, but
it is a spectre hovering in the background. Look at the troubles
some hams have in getting noisy electric power lines fixed.
Electric power distribution is very "legacy" by now and the
electric utility companies move slowly (if at all) on repairs.

>Seriously, however, it is going to be interesting when BPL lines are found
>adjacent to an active amateurs' property. BPL *will* be affected by rf.

>Fire up your gallons.

Seriously, that's not a good idea. Hams are conditioned now
to be legal. Deliberate interference is illegal. It is much easier
to pull the tickets of a few hams doing deliberate interference
than it is to remove or reduce a legal deliberate interference
source in the form of BPL with government-accepted regulations.

All in all, though, the FCC has NO POWER to proactively stop
Access BPL now. At best all it can do is set the incidental
RF radiation levels and then enforce those. Or, wait about 30
years or so until BPL is truly legacy service and then, like
land telephony, start drafting more stringent regulations. In 30
years from now, few of us will be in a position to do much.

>
>So that's what he was doing while assigned Bay Orderly. Typical.

Well, technically, the telephones in the military buildings
are government property or something like that. Since
telephones are communications instruments and, being
guvmint property, he DID "military communications!" :-)

That may be the line of reasoning that Rev. Jimmie Who
will present. Stay tuned.

>> Nursie was involved too much in those "hostile actions" in the

>> >of us, Sir Scummy.
>>
>> tsk, tsk, tsk...more "meaningful discourse" from nursie? :-)
>
>You apply physics differently in amateur radio? Hmmm?

I don't, but others seem to.

You have to put yourself in nursie's frame of reference. In that,
he imagines that absolutely NO electron, field or wave will
operate at ham frequencies unless a person is absolutely
licensed, certified, framed, and hung on the wall as a federally-
tested servicemember. Not only that, below 30 MHz, the
licensed, certified, framed and hung person MUST test for
telegraphy. Absolute. No ifs or buts, not even in a butt can.

Those who disobey that are forever afloat on the charybdis,
or doomed to listen to the exhortations and general arm-
waving along with dissing and cussing in this newsgroup.

>> > Sucks to be you.
>>

>> Only when I use either of the two Hoover appliances here. :-)

>
>He's like a phosphorous bomb. Lots of sparks and smoke.

I keep thinking "pink smoke grenade" used in signalling.

Pink to match the horror of reading profane words (oh,
heavens!) or thinking that mooning is displaying "male
nudity!" [purity and no profanity in telegraphy...ptui]

Smoke grenades smell bad when all fired up...but don't
last long.

"Code," "test," and "nuts" are all 4-letter words.

>> I guess this must be all of what modern U.S. amateur radio is
>> about...a bunch of mad-as-hell extras berating all the "lower
>> classes." Nice hobby. For Huns and other barbarians...?
>>
>> LHA / WMD
>
>Len, they're not all that way.

You ARE right. Most hams are good folks in their right minds.
Unfortunately, any human grouping has some nutsos.

Apparently, all the ham nutsos gravitated to in here after arthur
and his ritis slowed down their dizzying high-speed fists!

But, like the Big Hun (the other one who can spell in Hunnish)
said, "being interested means being licensed" so therefore
anybody without an official, nicely-engraved-border (suitable
for framing) amateur license can possibly "show any interest"
in radio. Nobody belongs in the RF world without that official,
certified, government-approved ham license...and those aren't
"real" unless a telegraphy test has been passed. Those are
the words from On High.

One last thing...PCTAs have so little sense of humor that
everything is done in an oh-so-serious (!) manner, keeping
always on the alert, ready to diss and cuss any NCTA in
sight or hearing. [sort of the General Order #1 here]*

* those who never went to basic or boot forget it...

PCTA want WAR! NCTA just want to end the code test.

PCTA are righteous, they are strong, hear them roar!

Breep, breep...

Sort of.

2,200,000W looks like a lot -and it is a lot, in the world of radio
transmitters. 2.2 million watts!

But compare it to other technologies....

2.2 million watts is only 2200 kW. At 746 W per HP, that works out to just
under 2,950 HP. You could get more than that out of a single 1950s era diesel
electric railroad locomotive, or a WW2 bomber - or about a dozen SUVs.

Compared to the power of even a "small" USN ship or submarine...

The 1 gigawatt ELF system is a bit bigger, of course. Count the cars on the
Genessee Expressway where it crosses Jefferson Road at rush hour and see how
quickly you get to the million-horsepower mark...

> Nixon resigned.
>
> We impeached Clinton because he didn't have the decency to resign.

Nixon resigned after his friends on Capitol Hill told him they couldn't muster enough votes to avoid throwing him out of office. End of story.

Clinton was not removed from office. What Clinton did was terrible to his wife and daughter, but what damage to the country (other than a major distraction) did it do? Are you so naive as to think that this huge deficit Bush is running won't hurt us? Already some want to reduce social security more. It isn't that social security is broke (and it appears to be in a bit better shape than they thought, but as good jobs disappear and are replaced by near minimum-wage jobs, I wouldn't bet); it is that the federal government has tapped the funds and issued IOUs to social security. They don't want to pay back money to the folks that need it the most. Rob from the poor and give to the rich.

Go figure; make $1,000,000 on the stock market and you only pay $150,000 in tax (15%). Now, go get a $60,000 a year job and see what you pay in taxes. Don't forget that over 7.5% social security tax you pay (and my pension is reduced slightly due to my employer's social security contribution. Retirement based on income above the tax base results in higher percentage payment.) when you figure your tax load.

Well, we finally got our high-speed ferry here in Rochester. Like all other high-profile projects (the new soccer stadium, the baseball stadium), the owners paid *far* less than they were originally supposed to. The taxpayers picked up the tab. Now we pay for security here, but Canada won't pay over there. Net result, before the first outing, prices were raised on vehicles and occupants as the ferry operator had to pay for security in Canada. Now, yesterday, we found out that for some reason the ferry folks got to take over most of the paved parking in a *public* park close to the ferry. I wonder why, since they raised the cost per vehicle. A *public* park, but in

those spaces, they charge you $5.00 per day to park.

Where are all of the whiners that complain about welfare? Oh, I forgot;
that doesn't apply to *corporate* welfare.

Compassionate conservative *IS* an oxymoron. I don't need any more idiots
in Washington running *huge* deficits to benefit the rich.

Best regards from Rochester, NY
Jim

Hello, Dee

I will absolutely agree with you that the sword cuts both ways. I am so *darn* tired of someone saying something and everyone jumping up and down and clapping their hands, whether BPL or weapons of mass destruction. Some argue that it is just the old hams that are fighting BPL. My problem is that just because the power company says it isn't interfering with anyone doesn't make that gospel.

Just like R.R.A.P. isn't Ham Radio, whatever those guys were doing
during WWII wasn't Ham Radio.

But there are some very confused folks here who think that "MARS
>>>IS<<< Amateur Radio," so I guess they might also think that
"Military Radio >>>IS<<< Amateur Radio."

Who really knows what they think. It's mostly incoherent, irrational
yelling.

> >>BTW, did you know that a Morse Exam acts as a disincentive to CW use

I've never seen orders for the seven hostile actions. They must not have actually occurred. I've never seen the schematics for the home designed (by a PE) amateur radio station. Perhaps they don't exist. Perhaps they do.

> Of course, those same individuals have to misdirect a thread

I got back from a week of aerial operations, drove by the storage unit, and checked that the lock wasn't jimmied ("jimmied" is a common use for B/E, not a slam against the Rev. Jim).

My T5 logs are safe and secure. One day they may have real historical value. I could divide them up and run some through Christie's and the others through Sothby's. Maybe I'll just make a run of numbered copies, suitable for framing.

First Steve says that he is going to insist that I lost my logs, then
he says that he has no doubt that I know where they are.

Somewhere in there is a deliberate falsehood.

Probably all of it.

> >>They may have been in a garage at one time and in a storage unit another.

The problem is that Steve demands evidence, but has no right to demand anything. I have no need or desire to comply, and that infuriates the ex-Marine. I recommend stress management for him before that bulging artery in his neck explodes.

Repeat after me:

All problems are the fault of Liberals...
All problems are the fault of Liberals....
All problems are the fault of Liberals...

It's great. As long as you can blame everything on the dreaded liberal,
you are absolved of any blame yourself. I personally know perhaps 1500
people. Maybe only 5 or 6 are actual Liberals. And no one that thinks
like they do has been running the show in a long time. How did they get
such power to make all the problems in the world?

>>As such, as long as the current ideology is in place, BPL WILL HAPPEN!

Hey, just to insert something good into this depressing topic, Mike
Melville has been tapped to pilot Burt Rutan's SpaceshipOne tomorrow at
0630 PDT. If successful and he reaches suborbital flight, this will be
just about as cool an event as I've seen in years.

CNN is covering the event. Dunno why Fox isn't. Seems like private
spaceflight would be right up their alley. Maybe Burt is a Leeberal? ;^)

You know this how?

> Having been in the apologist-era Armed Forces of the late 70's, it is my
>freverent hope that we DON'T allow ourselve to regress to that stage, which
>is
>exactly what I fear will happen with this candidate.

Why?

The late 1970s were the immediate post-Vietnam, post-draft era. You can't blame all the problems of that era on who was in the White House - unless you want to include JFK, who got us into Vietnam, LBJ who escalated it from a small force of "advisors", Nixon, Ford....
>
> Carter tried to castrate the Armed Forces in the 70's.

How?
>
> Bill Clinton didn't try to castrate them...he just made it possible for
>other guys to play with them....Oh yeah...he let a bunch of ragheads drag
>some
>of our guys through the streets of Mogandishu and them rewarded them by doing
>exactly what they wanted us to do.

How did Clinton "let them" do what they did? Should the US have stayed out of that conflict? Or gotten more involved? What threat were they to US security?

What's the solution to the Iraq mess? Why aren't the Iraqis grateful for their liberation? Who is responsible for the Al-Gharib abuses?
>
> Kerry? He IS bad news and he'll continue to be bad news.

Why? Because he's not a Republican? Because he opposed the war in Vietnam - a war in which he *personally* fought?

>He's already
>angry that the Republicans have done exactly what they said they'd do, and
>it's an embarrassment to Democrats.

I don't see that at all.

Bush & Co. told us that SH had weapons of mass destruction. None have surfaced. They told us SH was connected to 9-11. No evidence of that, either.

We've been told by Bush that we'll all be driving hydrogen cars - by when? And that we'll have permanent moon colonies and manned missions to Mars in the "near future". No mention of how it will be paid for, or what real benefits will accrue. Heck, there isn't even a commitment to save the Hubble space telescope or replace the shuttle.
>
> Clinton and his bunch tried to make the economy look good with smoke and
>mirrors, and as soon as he was no longer in office and able to hold the
>mirrors
>up, the true nature of his economics became apparent.

How? The stock market was up, unemplyment and inflation were low, and the expansion kept going on and on. Ken Lay wasn't one of Clinton's buddies. Nor was Halliburton.
>
> Bush Jr, just like his dad and President Reagan before him, have
>publically stated that economic recovery, if it is to remain viable, is a
>slow

And the good jobs keep getting exported. Ross Perot was right about that "giant sucking sound".
>
> Kerry will be more of the same "Tax 'Em To The Bone Then Flash Them With
>Great Entitlement Programs Made With Thier Own Money".

As opposed to Reaganomics "Let The Deficits Pile Up - We Won't Be Around To Pay Them Back". Or Bush Sr.'s "Read My Lips".
>
>We don't need Kerry. John Edwards had a chance...he just didn't bark
>as loud as Kerry. Too bad.

Personally I am surprised that the Dems couldn't do better than JK. But you know the old saying about Democratic Party planning; "If you gave the DNC the job of organizing a firing squad, they'd put the riflemen in a circle with the condemned person in the center..."

But you still didn't answer my questions, Steve:

When and under what circumstances was Kerry "side-by-side" with Hanoi Jane?

If indeed such a thing happened, why is it any worse than Rumsfeld shaking hands with and warmly greeting Saddam Hussein?

When is it OK to be against a war one's country is fighting? If there's armed conflict going on, should we still have elections? Or should the president simply serve until the conflict is over? After all, *anyone* who opposes the incumbent is, in some way or other, saying that the current leader's policies and decisions aren't right.

Have you thanked Ralph Nader yet?

Good grief . . lotta burdensome worn out nonsense here.

Ham radio is a licensed service everywhere on this particular planet
except in the cases of some very rare spits of dry land over which no
nation claims as it's soverign territory and/or, given the lack of
civilian licensing authority, then it gets down to whatever military
force happens to hold sway in the neighborhood, etc., etc., the

Spratleys being a particulary oddball example. Which is basically irrelevant in this thread, we all know this. Apologies.

In Alun's case he tripped to the isle of Saint Martin and worked into PJ7 as a G/FS or as a W/FS as a properly licsened alien. Alun being big on his alienism and all that. I'm assuming Alun had his paperwork right if any was required. The goverment of FS was/is the licensing authority when Alun operated there. Therefore his FS to PJ7 QSO was a legitimate amateur radio contact even if was a DXCC no-counter.

Brainiac's alleged T5 operation is a whole different ballgame altogether. Giving him the benefit of the doubt and accepting his tales about having "worked" a couple "dx countries" from Somalia on ten meters while he was there was not an amateur radio operation. The ham radio licensing authority for members of the U.S. military of which he was a member was vested in the command structure of that expeditionary force. He did not have their explicit permission to operate an amateur radio station in T5.

Therefore it's patently obvious that his "operation" was another simple case of freebanding, pirate radio, "extended CB" whatever ya wanna call it. For absolute certain he did not conduct a legitimate ham radio operation. It wasn't a T5 amateur radio station, Brainiac was just another unlicensed glom using some xcvr or another on 10M and did what they usually do.

T5/Nï¿½mind's freebander logs and cards = ZIP everywhere.

The real reality of this ongoing twisted bafflegab about Brainiac's "T5 ops" BS has nothing at all to do with ham radio except for the freqs on which he done it (maybe, but we'll never know) let alone ham radio policy. So take it to alt.dot.radio. freebanding or wherever his kind lurk and quit wasting the bandwidth here folks.

> statements)

Produce those statements Dee. Show me that quote!

Or do you just repeat what you are told?

In case you want something other than NeoCon Propaganda What he said
was that:

"during my service in the United States Congress, I took the
initiative in creating the Internet".

Gore was instrumental along with other Congressmen and perhaps women in
paving the way for the internet as we know it today. Within the context
of the interview, the message was clear enough. Unfortunately, *some*
members of the (liberal?) press chose to not only take it out of
context, but deliberately misquoted him.

Suggesting Gore saying that he "invented the internet" is very, very
inaccurate.

> is a right so Kerry could be expected to push BPL even harder
> than Bush. After all the government should decide what is best for everyone
> and amateurs are too small a minority to watch out for. Economic reality be
> damned as far as the liberals are concerned.

Are liberals anyone that disagrees with the present administration?
People bandy that word about with such abandon that I'd like to examine it.

I like the idea that the government that governs least governs best. I
like the ability to have and express my own opinion. I like the ability
to get rich if I desire (or at least attempt to) I believe that all
people should know that they are expected to be contributing members of
society, and if they plan on being lazy and don't want to work for a
living, as far as I am concerned, they can exist off what private
charity gives them or else they are welcome to crawl off in a hole
somewhere. I like the idea that no one gets special consideration, (such
as farm subsidies) for simply doing their jobs. And I don't think any
government should be allowed to spend $.01 more than it takes in, except
for extraordinary circumstances, such as all out war.

That would seem to make me a conservative.

But that doesn't seem to be the way things are going, does it?

NeoCons are actually Liberals in disguise. Different details, but the
same results.

I apologize if I get a little testy on the subject, but I think that
Conservatives are straying as far from their original principles as the
Liberals strayed from theirs. The results will eventually be the same.

> At least the "rich
> corporations" will, if BPL is not economical, kill it instead of sinking
> money into it. After all they want to stay rich.

Thank heavens!

> To really make any inroads in the market, BPL will need to be as cheap as
> dialup and as fast and reliable as cable modem.

I doubt that will ever happen. It starts more expensive and slower than
cable, and if it gets more popular, it will probably get slower.

>I find it hard to believe this combination will happen.

Agreed!

> The investment is too large.

Yeah, that is the strange part. The companies are going to have to run
fiber *almost* to the house! This means that the people that are signing
up are just that close to fiber performance! Why on earth they wouldn't
just run it the whole way is beyond me.

> Those who are
> willing to pay the price for high speed access have already switched to DSL
> or cable, etc. Even they are fighting to get people to leave dialup but it
> is the price that people generally put ahead of speed.

Depends. I used to have a dedicated phone line, and Compuserve for ISP.
I switched to Cable modem, got rid of the second phone line, and after 1
year, I made back all the money I paid for the cable modem, and am now
paying about $15.00 less per month (fiscally conservative 'lil ol' me)
than I was before.

Hoo, we are getting close to that strange discussion we had last year
with the fellow saying that if we know that it interferes, and we
transmit, we are purposely interfereing. That's enough to give a person
a headache!

But if a person is in a neighborhood with Access BPL, they won't need
to use that linear. Seems 100 watts will do just fine. I don't know the
frequency context of BPL/Amateur transmitter interference, but my guess
is that if you hear it on the band you are transmitting on, you'll do it
interference harm if you fire up.

"Abiding?!?" Crock.

Fort Huachuca is the Military Intelligence center for the U.S. Army.

One duty of M.I. is to run intercepts on foreign communications.

Some foeign countries still think that manual telegraphy is
"effective" so the M.I. teach morse code to intercept
analysts. For LISTENING.

The only "use" for morse code is in LISTENING, of intercepts,
ELINT.

The U.S. military does NOT use manual telegraphy for
radio communications. [USN blinker lights are not radio]

The Signal Corps is the communications branch of the Army.
The Signal Center is at Fort Gordon, GA. The Signal Center
doesn't teach any morse code receiving or sending.

Katapult Kellie should valve off all that steam and join the
rest of the world in this new millennium.

Good luck on that one, now...

Does anyone besides me remember the quote "What's good for General Motors is
good for the USA"?

>>And replace him with who? John Kerry? A guy who sat side-by-side with
>>this Nation's disgrace, Jane "Hanoi" Fonda...?!?!
>>
>Did he? Heard that that photo was fake.

Not faked. Exaggerated. See:

http://www.snopes.com/photos/politics/kerry.asp

John Kerry and Hanoi Jane were, indeed, at one 1970 anti-Vietnam-was rally.
That rally was in Valley Forge, PA, only a few miles from here. They were not
together, and if you look closely at the picture you see that they were in
proximity but not "side-by-side".

For the important point about that picture, see below. I have met the man who
took it, btw.

>And it's not like he was
>touring Hanoi with her.

Exactly.

>For all we know, Jane might have been a CIA spy.

No. Her activities there during her 1972 trip and the results to American POWs
have been well documented:

http://www.snopes.com/military/fonda.htm

Note that not everything that has been written about HJ's trip to North Vietnam
is true. But there's enough that has been verified to make a strong case.

The important point is simply this: Kerry and Fonda attended the same antiwar
rally - in 1970. Fonda didn't go to North Vietnam until 1972 - *two years
later*!!

Are we supposed to condemn Mr. Kerry because he was sitting near someone who
would go on to commit arguably treasonous acts two years later?

>> Both of whom "support the troops" by making public statements that give
>>aid and comfort to this Nation's foes WHILE we are in conflict with
>>them...?!?!
>>
>Vietnam was a stupid war. Now if we had a goal and a strategy that made
>any sense, maybe we could have achieved something...

The goal, as I see it, was for LBJ to show he wasn't "soft on communism". But once involved heavily, he couldn't figure a way out.

Fact is, after WW2, Ho Chi Minh and his resistance fighters asked the USA for help. They'd been fighting the Japanese for years (since the fall of France) and wanted to be independent. He went to the USA in large part because he saw us as a former colony that had become independent and prospered. But the USA wasn't going to oppose France getting back her colonies, so he was turned away and "French Indo-China" turned right back to the French. (Never mind that France could neither protect nor liberate her colonies during WW2, and would not agree to Vietnamese independence).

So Ho looked elsewhere for help, and got it. From the Soviets. Also got a new ideology and a bunch of quid pro quos.

>we have more important things to spend time on?" After a month it would
>have blown over...

Yep.

In fact it would have been *really* neat if he'd simply up and said:

"Yeah. I shagged her. Many of you would have done the same thing. At least some of you *have* done the same thing. Now, all of you who have been 100% faithful to your spouses from the day you said your I dos until today, and who are willing to testify to that under oath, stand up."
>
>Why does GW still claim that Saddam aided Al Queda?

Because it would be political suicide to admit there was no evidence.

>Or is it that Saddam didn't
>tell the USA ambassador in Bagdad (or elsewhere) that "Al Queda is
>planning an
>attack on you guys and I kicked them out of my palace"? Not telling the
>cops about someone hatching a crime conspiracy is illegal.

See above.

The fact is that the alliance went into Iraq with a lot of misconceptions and bad information. Plus a much smaller force than was amassed for the first Gulf War. And without a well-formed exit plan.

It will be really interesting to see how June 30 turns out.

There seems to be some dispute as to what level in the military command
structure can authorize amateur operation, and what level of paperwork is
necessary.
>
>In Alun's case he tripped to the isle of Saint Martin and worked into

>authority when Alun operated there. Therefore his FS to PJ7 QSO was a
>legitimate amateur radio contact even if was a DXCC no-counter.

Absolutely agree.
>
>Brainiac's alleged T5 operation is a whole different ballgame
>altogether. Giving him the benefit of the doubt and accepting his
>tales about having "worked" a couple "dx countries" from Somalia on
>ten meters while he was there was not an amateur radio operation. The
>ham radio licensing authority for members of the U.S. military of
>which he was a member was vested in the command structure of that
>expeditionary force. He did not have their explicit permission to
>operate an amateur radio station in T5.
>
How do we know this for sure?

>Therefore it's patently obvious that his "operation" was another
>simple case of freebanding, pirate radio, "extended CB" whatever ya
>wanna call it. For absolute certain he did not conduct a legitimate
>ham radio operation.

Again - how do we *know* that the required authorization wasn't obtained?

I agree 100% that if such authority wasn't obtained, it wasn't an amateur
operation at all.

In any event, the claimed operation allegedly took place on 10 meters and
allegedly involved at least two QSOs.

>It wasn't a T5 amateur radio station, Brainiac
>was just another unlicensed glom using some xcvr or another on 10M and
>did what they usually do.
>
>T5/Nï¿½mind's freebander logs and cards = ZIP everywhere.
>

>The real reality of this ongoing twisted bafflegab about Brainiac's

>freqs on which he done it (maybe, but we'll never know) let alone ham
>radio policy. So take it to alt.dot.radio. freebanding or wherever his
>kind lurk and quit wasting the bandwidth here folks.

The thing I find interesting is the last paragraph of my post, below. *Nobody*
is claiming to have worked T5/N0IMD, nor complaining about not getting a QSL
card. In DX circles, that kinda says it all.

>> >> *if* that were the case - wouldn't it make all of the claims true?
>> >>
>> >> And why get all upset about it? Nobody is claiming they worked
>> >> T5/N0IMD. Nobody is complaining they didn't get a QSL card from the
>> >> alleged operation.

Sure, they'd be grossly negligent if they didn't. I'll just bet that
Osama Baby has at least looked at CW for his purposes and that since
9/11 our guys have ramped up their volume of poking around for it. So
yes, the feds certainly do have an ongoing and abiding interest in the
use of CW, one-way for their purposes and/or otherwise.

> However, amateur radio isn't the military. We don't have the same mission - or

> >aboard.
>
> Always nice to be friends with the guy in charge.

Nah, it was just another bit of Naval tradition, DoD civilian
professionals were treated as officers and were expected to
reciprocate the courtesies received. I had to introduce myself to both
the skipper and the air boss and join them for dinner in officer's
mess on Friday evenings, etc. I knew nothing about any of it when I
logged aboard the first time. A crusty Chief Yeoman sat me down in his
office and went thru the list of what I had to do and not do.

That one wasn't on you, John. Certain other posters have "insisted" that
those radio services are "major" contributors to "emergency comms".

They have yet to establish any validity for those claims.

>
>How?

He diluted the chain of command. Part of the errors that occured in the
Iranian desert were directly the result of White House meddling in what should
have been an military operation.

He further diluted the Nation's overt and cover security services with "warm-fuzzy" Executive Orders that have, to this day, continued to leave America blind and hog tied.

>that conflict? Or gotten more involved? What threat were they to US security?

Jim, did you study any of the after-action reports out of Mogandishu?

The threats were there. We knew it. "Rules of Engagement" establish by Billary in Washington were not "real world functional".

>What's the solution to the Iraq mess?

Which one? I see several "messes" here...not just one.

> Why aren't the Iraqis grateful for their liberation?

Be danged if I know. The people of that region, as rich as their culture is (was?) is rife with despotic leaders who have been doing this to them for centuries. If they weren't willing to shake the yoke off without our help, I don't think our intervening was any more welcomed.

We lost our chance to really show who/what we were all about when the looting and rioting started and we didn't protect the infrastructure, both business and social, any better than what we did.

> Who is responsible for the Al-Gharib abuses?

Who indeed. I don't have any answers any more than you do.

>> Kerry? He IS bad news and he'll continue to be bad news.
>
>Why? Because he's not a Republican? Because he opposed the war in Vietnam - a
>war in which he *personally* fought?

Because he's an apologist.

The time to fight or protest that war is long past.

He's one of those who STILL thinks we should be going around with our tails between our legs, cowing and beying for forgiveness.

>>He's already
>>angry that the Republicans have done exactly what they said they'd do, and

>I don't see that at all.

YMMV.

>Bush & Co. told us that SH had weapons of mass destruction. None have
>surfaced.
>They told us SH was connected to 9-11. No evidence of that, either.

"Bush & Co." told us that based upon information gleaned from "inside
sources" that TOLD him there were weapons.

Bush is not the first president to act on less-than-adequate intelligence.

That intelligence is not there due to the undermining of the intellignece
agencies by Jimmy Carter. We lost hundreds of operatives in the Middle East
after he reined in the CIA. It took us 30 years to set those sources up
during/after WW2.

>We've been told by Bush that we'll all be driving hydrogen cars - by when?

We were told that in Popular Science in the 60's. Again, So what?

>And
>that we'll have permanent moon colonies and manned missions to Mars in the
>"near future". No mention of how it will be paid for, or what real benefits
>will accrue. Heck, there isn't even a commitment to save the Hubble space
>telescope or replace the shuttle.

Again...all of this "forecasted" in the 50's and 60's.

>> Clinton and his bunch tried to make the economy look good with smoke

>was Halliburton.

HOW...!?!?

Jim, Billy wasn't in office 90 days when he tried to claim that (then)
recent improvements in the stock market were a direct result of "...America's
confidence in my administration to lead them to economic recovery".

Never mind that the NYSE had been on a steady upward trend for the
previous 12 months.

The NYSE and all economic indicators are up now.

This "recession" suddenly appeared when Billary was no longer in office
and no longer able to keep up the charade.

>> Bush Jr, just like his dad and President Reagan before him, have

>condemned person in the center..."

Yep.

The Dem's COULD do better. I would have had to think real hard about a
vote for Edwards. Too bad the loudest dog won rather than the better candidate.

>But you still didn't answer my questions, Steve:
>
>When and under what circumstances was Kerry "side-by-side" with Hanoi Jane?

The specific date? I don't recall. The articles from public media have
circulated the web.

>If indeed such a thing happened, why is it any worse than Rumsfeld shaking
>hands with and warmly greeting Saddam Hussein?

Who cares? Hanoi Jane is a documented traitor. How Kerry, a combat vet,
his opinions on the war itself notwithstanding, could sit next to a person who
openly gave comfort to the people who were trying to proactively kill him is
beyond me.

Those who protested the war had valid arguments.

Bill Clinton even had a valid RIGHT to PROTEST the war, even in Oxford,
England. Billary's error was at first saying he never did it then trying to

claim the pictures weren't him.

If the gutless liar had simply stated "Yes, I was against the war and I exercised my right to protest it in a legal demonstration", even the most right-winged Hawk would ahve had to give him due for being honest about it.

Kerry earned the additional right to speak out...practical experience. But to sit down next to a low life slut who intentionally betrayed her Countrymen was foolish. I would have shot her first. It's a testimony to America's professional, all-volunteer force that she hasn't been shot.

>When is it OK to be against a war one's country is fighting? If there's armed

>Problem is that he's trying to skip over that "separation of church and
>state" thing.

Hardly, Robert. He's a man of strong moral conviction and I believe him
to be honest in his desire to see a moral reawakening in this country. While I
think that organized religion in it's own right is a scam, the basic tenents of
Christan belief are what built this nation and made it strong.

The ironic thing is that the basic tenents of ALL major religions profess
the same thing, yet all are at each others throats over who's more right or
more devout.

But no nation can exist for any length of time without some basis of faith and basic moral convictions.

We have already watered down each and every tenent of basic civility until only the force of law exists. And once we have removed the "roadblocks" of some basic moral standards, what's left?

>> This country got rid of one lying, deceiving creep and narrowly avoided

The economy was held together by a ton of taxes, Robert. Reagonomics started us on the road to financial solvency. Clintonomics taxed the be-jeebers out of us.

I agree. That's what happens when you don't have an intelligence network you can trust in place and have to depend on third party sources. Thanks, Jimmy Carter.

Even the FCC and VEC's quit administering a Morse sending test. They
only administered a receiving test.

Hmmmmm?

Maybe the sending test would have been a disincentive to CW use on HF.

Steve,

I have no problem with someone being rich; I have a problem when I pay a higher percentage of my pay to taxes than they do.

Please don't tell me you are so naive that you think that the wealthy always pay a higher percentage in taxes. Fortunately, one overhaul in social security plugged one big hole. Social security used to be based on the highest three earning years in the last 10. I knew one businessman that paid himself quite poorly, taking most of the money as unearned income (thus exempt from social security). Fact is, I know a businesswoman doing the same thing. What happens is they start paying themselves handsomely the last few years (and paying those payroll taxes too). As a result, they pay over 20 or 30 years half what others pay and collect at 100% social security. Unfortunately for both of these folks, they changed social security so it is based on the 30 highest earning years, so now they get a lot less. But that loophole existed for years.

Why is it that these "compassionate" conservatives can stand by and watch school districts with 30 plus students in a classroom whilst a suburban school has only 20 per class and every 8th grader receives a *laptop computer* and honestly believe that everything is just fine? How did New York state, in calculating aid to school districts, manage to count every student in NYC as 0.7 student?

You are gullible at best. I'm not mad at you, just upset at priorities in this country. Remember too that the whole world is watching this country to see if our actions anywhere correspond to what we are saying. If I were a European nation, I'd not only be a bit skeptical, I'd be nervous too.

I log the "first-time" contacts regardless of band or mode, as it serves as
a memory reinforcement. The second, third, fourth time etc., I do not log
usually, unless there is some compelling reason to.

>
> However there is another very good reason for keeping a log even though

Definitely. As well as keeping other forms of time/date information. I take and photocopy my time sheet at work even, just so I will always have a record of where I have been. (Especially living in the Patriot Act era when they can f**k with you all they want and aren't liable for their actions.....)

No. Copies from NARA of nursie's "jacket" would do it.

>> "No Proof = Didn't Happen."
>
> The proof is in the phone call, Lennie.
>
> You haven't made it.

Don't have to. Military records of service are at NARA, not with the VA. VA will use NARA.

[National Archives and Records Administration, St.Louis]

Complete information is at NARA. That would show the when and where of "hostile actions." That would show MOS and where served. It's all there.

> Makes you look pretty stupid with that last claim.

Not at all. I know where the military service records are kept. I also know what establishes and defines MARS, posted that in here. Nursie didn't post that. Nursie still wanna claim:

"Sorry, Hans, MARS >>IS<< amateur radio!"

Nursie has mental constipation problems (in addition to other mental problems). Nursie need help.

Temper fry...

Oh, my! Will you have CNN and Fox News videotaping the Event?

Will the AR Newsletter publicize it?

Maybe it will make the "In Brief" section of the ARRL webpage.

Just think...fame, immortality, adulation, praise, maybe a
special medal for valor for another "hostile action!"

All about "amateur radio policy." Riiiiiight.

Temper fry...

You two Veterans of the military can establish that, can't you?

After all, another PCTA has flattly stated "MARS >>IS<< amateur
radio."

Since MARS is rather obviously military, defined by DoD and not
the FCC, then it is a simple extension of such knowledge to
say that military communications is also amateur. :-)

Next time you two dine at the Captain's Table, bring it up.

>>In Alun's case he tripped to the isle of Saint Martin and worked into
>>PJ7 as a G/FS or as a W/FS as a properly licsened alien. Alun being

Oooooo....macho emotional RAGE! Physical competition!!!

Blatant physical challenge of FIGHTING prowess!!!

All imporant attributes for radio amateurs? Or radio amateur policy? I think not.

Tsk, tsk, tsk. Need for some approved (prescribed by a REAL MD) tranquilizer or other calming drug seems warranted.

Let's see...modern fighting tools (since at least 1700s) allow "just a few ounces of finger pressure" to allow reaching out and touching someone supersonically. No need for physical confrontation up close and personal. [wonder who mentioned "just a few ounces of pressure?" :-)]

All that proves that nursie don't wanna do anything but FIGHT in here. [sic...and sick]

Temper fry...

>expeditionary force. He did not have their explicit permission to
>operate an amateur radio station in T5.

Kelly NEVER served in the armed forces of the United States.

Kelly does NOT understand the military chain of command.

Permission to do anything IN the military is granted by ranking
officers.

Didn't Kelly hear that at the Captain's Table while dining with
all that rank? No? Tsk, tsk.

>Therefore it's patently obvious that his "operation" was another
>simple case of freebanding, pirate radio, "extended CB" whatever ya
>wanna call it. For absolute certain he did not conduct a legitimate
>ham radio operation. It wasn't a T5 amateur radio station, Brainiac
>was just another unlicensed glom using some xcvr or another on 10M and
>did what they usually do.

Amazing at the range and scope of rationalization for HATING
another newsgroup poster by the high-society ham extras.

Kelly should explain his "superiority" in not only radio but relative
to the rest of society. [Kelly is "superior" only because he claims
that while busy inflating past claims to a greatness never before
seen by hamkind]

>T5/Nï¿½mind's freebander logs and cards = ZIP everywhere.

Kelly has taken on a new role...that of International Regulator
And Punisher of anything an NCTA says.

Yawn.

>The real reality of this ongoing twisted bafflegab about Brainiac's
>"T5 ops" BS has nothing at all to do with ham radio except for the
>freqs on which he done it (maybe, but we'll never know) let alone ham
>radio policy. So take it to alt.dot.radio. freebanding or wherever his
>kind lurk and quit wasting the bandwidth here folks.

Kelly is allowed to inflate his single patent to 26. Kelly is PCTA.
[proof is with the U.S. Patent Office and several patent websites,
showing only one...and that one as co-inventor]]

Kelli is allowed to shoot bears from an aircraft carrier. Kelly is
PCTA. [there is no proof of this but Kelly will damn anyone who
disputes it]

Kelly claims knowledge of WW2 military vehicles and their radios
as absolute truths. Kelly is PCTA. [proof is in many places,
including old documents of the U.S. military disputing that]

Kelly has repeatedly damned others opposing his fish stories.
Kelly is PCTA. That is approved under the ROE of this news-
group trying to be dominated by PCTA.

They are PCTA, hear them ROAR! :-)

A press run would be a non-good idea. That would start another
spate of Book Burning by the PCTA in general, sponsored by
the enemies of fantasy.

Some overweight stubbly-faced documentary film maker would
get publicity for his expose of Somalia, that it "never happened."
["Moore to come" as Variety put it...]

Denial of reality is the stock in trade of the olde-tyme hammes
who love, honor, and obey morsemanship. Everyone who speaks
against them "LIE!" :-)

Show us your "Proof" that manual telegraphy is still used for
U.S. military communications. NOW. Today. Confirm your
claim of another posting.

You have not yet proven that "MARS >>IS<< amateur radio."
Despite the real, true Proof established by DoD Directive
4650.2 (eff. 21 Nov 03).

The rest of the world lives in reality, not the fantasy imagination
of "The Last Hostile Action Hero."

Temper fry...

There must be some mental block induced by too much
morsemanship. The morsemen can't understand reality.

Or, they are so immersed in their only radio service active
in morsemenship that they are totally blind to all other radio
services. Might be a good project for some PhD candidate in
psychology as a Dissertation.

Time has stopped for the morsemen. They continue to live in
the past, imagining glories lives of navel high society, "hostile
actions," mighty titles of importance, all from morsemanship
credentialism.

Back some 49 years ago, NATO released their phonetic
alphabet. Phonetic alphabets are of no use for manual
telegraphy...apply only to voice communications. Just the
same, the morsemen keep insisting everyone still uses "CW"
(manual on-off carrier keying telegraphy) for military
communications.

Their minds are warped, living in fantasies of their own beeping.

Kelly, unable to admit what is happening since his bear-shooting
days as King of the Katapults, manufactures "knowing analyses"
of terrorists.

Kelly the putz-caller seems to forget a well-publicized video bite
of Osama bin Laden rather obviously using a hand-held transceiver
in earlier days. No code key was evident in that video bite seen
on major networks.

Kelly has NO information on "ramping up" on-off keying codes by
the U.S. government or anyone else. The Military Intelligence
School at Fort Huachuca has been active for years. All U.S.
government agencies involved in any way use that M.I. Center,
including those few needing any sort of skills with on-off codings
such as morse. That as an economic consideration, not any sort
of technical reason or alleged "importance of morse."

Reference: Fort Huachuca public affairs office.

>> However, amateur radio isn't the military. We don't have the same mission -
or
>> the same resources.
>
>Even if we did I wouldn't go anywhere near it.

Why not?

"Sorry Hans, MARS >> IS << amateur radio!" True or not true?

From someone "shooting bears for naval intelligence" and bragging
about "dining with the [aircraft carrier] captain," that sounds hollow.

>> >> > So, some olde-tyme hamme can say he "shot bears for navel

>
> HOW...!?!?

Fried.

In nursie's case, not being able to follow, he wants his over HARD.

That's the Republican way to go... :-)

Now, what has all that uninformed very-one-sided diatribe to do
with amateur radio or broadband over power lines?

Absolutely NOTHING! :-)

The might-makes-right morsaholics have once more turned
this newsgroup into just-another-private-chatroom about subjects
they know zits about venting fury and vengence and retribution
on all who dare upset their cozy little klatsch place. :-)

Meanwhile, BPL sits there in 3 1/2 places, ready to raise holy
heck with HF signals and the mighty pundits are repeating
other pundits' words of damnation about opposite political
parties cries that "it's all the fault of the [opposite] party!!!"

Powerless prose from political pundits, pandering their own
egos.

Temper fry...

> BPL = Ban Pretentious Liberals?

Heh. No. It doesn't matter which political power is "in power"
in DC on Access BPL. It evolved from the initial trial in
Norway a decade ago and presents a "business ideology"
(of making money) and all that capitalism stuff.

Somehow, through whatever means, the BPL advocates in the
USA convinced the FCC that it was the greatest thing since
sliced bread to fit the "broadband super highway." It just
happened that the FCC has Republican-oriented commissioners
and the Acting Chief of the NTIA is sucking up to Bush's
speech statement in rather blatant politicalization.

> Hoo, we are getting close to that strange discussion we had last year
>with the fellow saying that if we know that it interferes, and we
>transmit, we are purposely interfereing. That's enough to give a person
>a headache!

Not quite. Amateurs have to understand that they are small-time
players in this particular game. All the rah-rah and we-are-the-
greatest internal pep-talking doesn't help the image presented to
the lawmakers. It boils down to a very few individuals trying to
"get even" for incidental interference by deliberate interference
with a communications service. That service is much bigger, in
both employees and affected customers than a few hams in any
particular locality. It would be a lopsided legal fight, despite all
the whoopdedo of "helping" by the League. If Access BPL spreads
to many more communities, the League would run out of legal and
moral resources to help.

Deliberate interference isn't necessary. Ordinary operating should
be sufficient to disrupt Access BPL in any one location. Hams
would just need to transmit more and on different HF bands...not
spending more of their free time on the Internet and then writing
that "they are very active on the bands" when they were not.

> But if a person is in a neighborhood with Access BPL, they won't need
>to use that linear. Seems 100 watts will do just fine. I don't know the
>frequency context of BPL/Amateur transmitter interference, but my guess
>is that if you hear it on the band you are transmitting on, you'll do it
>interference harm if you fire up.

Perhaps. Technical details of Access BPL systems have yet to
be released to the electronics industry. While that may be logical
to assume, it isn't proof positive.

>> All in all, though, the FCC has NO POWER to proactively stop
>> Access BPL now. At best all it can do is set the incidental
>> RF radiation levels and then enforce those. Or, wait about 30
>> years or so until BPL is truly legacy service and then, like
>> land telephony, start drafting more stringent regulations. In 30
>> years from now, few of us will be in a position to do much.
>>
>> LenAnderson@ieee.org

I left that in on purpose. Just to emphasize that the FCC CANNOT
stop Access BPL right now. But, what can be done, is to demand
TESTING of any installed systems. LOTS of it to correspond with
a wide-area installation (a logical demand).

The FCC has NO power to stop BPL directly. It's not in the rules. [that's why docket 04-37 is concerned with an NPRM] But, by demanding appropriate TESTING with emphasis on PASSING all tests, THAT can make it economically infeasible.

Testing takes valuable manhours. BPL systems will be at many, many places in one community, therefore MUCH testing is needed for compliance. Not only does that affect the installation budget, but it takes TIME to complete. Businesses offering broadband services want to start making money as soon as possible (also logical) but lots of testing and test time would delay that.

That's a realistic way of looking at the problem and a possible way to make BPL economically difficult to sustain. However, remember that once BPL is in-place, it will quickly become a legacy service and damn difficult to remove.

LenAnderson@ieee.org

>inaccurate.

The Internet went PUBLIC in 1991...under the Clinton-Gore
administration.

The Internet ALREADY EXISTED and was running. Some
may have been, as I was, already on USENET...which grew
out of ARPANET that existed in the 1970s.

Gore was instrumental in getting GOVERNMENT involved
in the Internet, starting the ball rolling so to speak. Every
U.S. government agency, nearly every U.S. community
government now has a website. The military picked up on
that and most large units have websites and promotes
both training and information exchanges through the web.

The electronics industry and academia as well as the
U.S. government were the creators of ARPANET through
the Advanced Research Projects Agency (ARPA). With
more and more use, plus evolved increases in rate of
information exchange, that net split with USENET linking
industry and universities. Communications technologies
kept improving, advancing and by late 1990 there were
many who felt that this "new" Internet should be within
everyone's reach. That wasn't a political decision. It was
that of "idealogues" strangely enough. They had seen
the predecessor, BBSs, grow in the decade prior.

As of 2003, a mere dozen years after public opening of
the 'net, the U.S. Census Bureau reported that one in five
U.S. homes had some form of Internet access. That IS
explosive growth. It keeps on growing. The Internet is
now "legacy."

Politics had little to do with it. Technology was the spark.
Ideology and practicality and convenience did the trick
from then on.

No need. There's a cellular telephone subscription for one
out of three U.S. citizens according to the U.S. Census
Bureau. (cellphones are not Part 15 devices) CB radios
number somewhere between 2 and 5 MILLION, estimated
by NTIA. (CB is not under Part 15) I don't know how
many FRS/GMRS HTs have been sold, but they are
regular consumer electronics items as consumer electronics

stores and are good for 5 to 10 miles communications
range. (FRS isn't under Part 15 either)

One-way communications has been provided in emergencies
for decades by broadcasting (also not under Part 15). In real
emergencies the Public Land Mobile Radio Service (PLMRS)
radios have been invaluable for local government and utility
and medical aid agencies. (PLMRS isn't under Part 15).

It is very inaccurate to state anyone has "insisted unlicensed
devices play a 'major' role" in emergencies. Those radios
ARE used by emergency communications groups in real
emergencies.

Try to get with reality instead of hiding in outrage in fantasy-
land over some perceived "insult" against your shouting
and arm-waving.

No problem, I didn't interpret it as being one on me, but as long as I
was replying to your post, I chipped in my $0.02 worth. Read on...

>Certain other posters have "insisted" that
>those radio services are "major" contributors to "emergency comms".
>
> They have yet to establish any validity for those claims.

I didn't see the original posts on that, but if you've accurately
summarized what was said, then I would also be interested in learning
of the specifics.

I'm personally aware of some areas where there are Neighborhood Watch
groups using FRS radios, and at least one where an ARES group uses
GMRS to communicate with the local NW group on FRS (the first seven
channels are the same freqs).

I'm also personally aware of instances where FRS radios are used by
ARES/RACES personnel or by government or emergency services personnel.

I am not personally aware of any instances where the regular users of FRS, GMRS, MURS, and the other Part 15 services are written into the disaster plans for a given locality, except in the case of REACT groups using equipment for those services. In the sense of having families who use FRS radios at the mall to help keep track of the kids being written into emergency communications contingency planning, or folks who use GMRS or MUR for similar purposes, no, I've never seen or heard of that being done. That of course doesn't mean it hasn't been done somewhere, just that if it has, I haven't heard of it - I'd like to hear about it if someone's got specifics on one or more cases where this has been done, though.

I think maybe you're half right, Len. believe it or not, even my ham rigs are Part 15 devices and come with the usual Part 15 warning sticker on them.

The transmitter on cell phones (which are radios, not telephones), CB rigs, FRS/GMRS/PLMRS radios, and ham rigs are covered under those portions of FCC regulations that authorize the user to operate the transmitter (part 95 for CB, part 97 for ham, etc.).

However, the receiver portion of the device is covered under Part 15.

As I said, I did not see the original posts, but I am aware of instances where such equipment is used by governmental and emergency services personnel, as well as by ARES/RACES and other "civilian" EmComm groups (like REACT).

But who generates the economic base, Jim?

You and I? I don't know you beyond this forum, of course, and you very well may be a business owner for all I know. But very, VERY few of those "rich" are what we would call "idle rich". They got that way because of businesses they ran, which means people they employed, products they sold or services they delivered.

>Please don't tell me you are so naive that you think that the wealthy always
>pay a higher percentage in taxes.

I didn't say they didn't pay an appropriate ir INappropriate percentage, Jim. I just said we seem to spend a great deal of erroft tearing these folks down.

>Fortunately, one overhaul in social
>security plugged one big hole...(SNIP)

I agree with your summation about SS, Jim. Those who have more than six figure valuations should not have their hands in SS, period.

>Why is it that these "compassionate" conservatives can stand by and watch
>school districts with 30 plus students in a classroom whilst a suburban
>school has only 20 per class and every 8th grader receives a *laptop
>computer* and honestly believe that everything is just fine? How did New
>York state, in calculating aid to school districts, manage to count every
>student in NYC as 0.7 student?

On the otherhand I can attest to rather well funded public school programs in socioeconomically depressed areas here. Not every school system suffers such indignities, Jim. That you have to look to local school boards and state programs for as much as anything Washington generates.

>You are gullible at best.

Why? Because I believe that people ought to be allowed to reach that goal that we claim they can without penalizing them for it?

Jim, there ARE positive results from those folks' contributions OTHER than directly to the tax base. I'd rather they be paying less in direct taxes and more in infrastructure for the businesses they run!

>I'm not mad at you, just upset at priorities in

Part 15 regulations apply to INCIDENTAL EMITTERS such as
receivers, data couplers (if you have software controlled anything
as a peripheral) and so forth.

The stickers are there by the manufacturer and are intended to
make the buying public believe in the sanctity of the product.
:-) Remember the radios and TV sets of old from brand [which]
which said "For best results always use [which] tubes?" :-)

The Parts of Title 47 C.F.R. that apply to various radio services
are listed after a link on the FCC Office of Engineering and
Technology page. Under those parts one gets a link to the GPO
which has the PDF repros of all the Parts of Title 47. The current
issue date at the GPO (Government Printing Office) for Title 47
is 1 October 2003. That facility is a lot better than buying the
same thing in hardcopy from the GPO. The last of five volumes
of Title 47 (Part 80 to end) cost more than $50 even if shipping
costs are free. The GPO does accept VISA and Mastercard
and can take orders over the phone for local GPO outlets.

>The transmitter on cell phones (which are radios, not telephones), CB

True enough. Problem is, nursie doesn't know which Part is
which and becomes emotionally unstable when opposed to
any of his postings.

>services personnel, as well as by ARES/RACES and other "civilian"
>EmComm groups (like REACT).

Nursie doesn't want to see that. The original ranting and raving
against anything "unlicensed" came from a mild comment by
Brian Burke in here over a month ago.

There's two worlds being discussed in here. The major one is
reality - where you and I live - and the fantasylands wherein all
the existing radio communication infrastructure fails in any
emergency, only ham radio being able to save the day.

Not only that, REACT grew through CB radio and the fantasyland
livers think that all CB is evil, wicked, mean, and nasty, unfit
for proper morsemen to ever approach let alone use. CB is
unlicensed, of course, therefore it isn't any good since no test
need be passed to operate one. :-)

You and I know that most real emergencies are very local in
nature and those can be aided by relatively short-range radios
having 2 to 15 mile ranges. Those can be any of the presently
unlicensed radios as well as licensed, such as PLMRS.

Unfortunately, the vast majority of messaging in here, other than
the "learned" pontificating of political pundits, involves arguing
the fantasyland worlds of the various angry PCTA or those who
wish to seek gurudom of the newsgroup (and whose words are
golden, never ever to be talked against). Unless one is a
regular reader in here it is difficult to follow some threads...even
those that don't evolve into the flame wars you see. :-)

Yes, they are living in the past. This has nothing to do with the merits or otherwise of their beloved mode, simply that the world has unquestionably moved on and they have not.

It brings me in mind of the Jethro Tull song "Too Old to Rock 'n' Roll, Too Young To Die", not just the title, but all the words. As any afficionado knows, this of course appeared on an album entitled "Living In The Past"!

This is the ultimate anthem to clinging to youth, which we all tend to do, even those of us who can't stand that d*mn bleeping!

If you listen to/read the lyrics of the whole song, you'll see that Ian Anderson saw it as no bad thing. What is truly pernicious, and constitutes the difference between him and them, is that so many morsemen want to drag others kicking and screaming into the past!

I'm glad you brought that up.

You are obviously referring to the picture taken in Valley Forge, PA, in 1970. This was at a rally by Vietnam Veterans Against the War. JK is three rows behind HJ and somewhat to the left in the picture. The bearded, sunglass wearing man to the right of HJ is not JK.

That picture and the story behind it are shown here:

http://www.snopes.com/photos/politics/kerry.asp

There is another picture in circulation that shows the two of them at a podium.
The second picture is fake, made by photoshopping two different pictures taken
at different times and places.

The first picture is real and unaltered. I have met the man who took it.

The problem is that Jane Fonda did not go to Hanoi until 1972 - two full years
after the Valley Forge picture was taken!

Do you see the problem?
>

>"warm-fuzzy" Executive Orders that have, to this day, continued to leave
>America blind and hog tied.

Carter left office almost a quarter century ago. How could his old orders
continue to cause such problems - particularly since 16 of the intervening
years were those of the Reagan and Bush administrations?

How could one president, in office for only four years, cause so much trouble?
>

> Jim, did you study any of the after-action reports out of Mogandishu?

No. But you are avoiding the questions, Steve.

How did Clinton "let them"?

Should the US have stayed out of that conflict? Or gotten more involved?

What threat were they to US security?

> The threats were there. We knew it. "Rules of Engagement" establish by
>Billary in Washington were not "real world functional".

Agreed. But what about the rest of the questions?
>
>>What's the solution to the Iraq mess?
>
> Which one? I see several "messes" here...not just one.

1) How do we extract ourselves from there?

2) How do we avoid such involvements in the future?

>> Why aren't the Iraqis grateful for their liberation?
>
> Be danged if I know.

How about these reasons:

1) They are embarrassed that their vaunted army fell apart so quickly - twice.

2) They are not really a country but a bunch of warring factions held together
by a strongman. With the strongman gone, the factions are at each others
throats again. This isn't anything new - it's Yugoslavia all over again. Say,
who was in charge during that war?

>The people of that region, as rich as their culture
>is (was?) is rife with despotic leaders who have been doing this to them for

Right. And other sources said there were none. The sources who said there were
had a vested personal interest in seeing SH overthrown.
>
> Bush is not the first president to act on less-than-adequate
>intelligence.

Agreed!
>

>That intelligence is not there due to the undermining of the
>intellignece
>agencies by Jimmy Carter. We lost hundreds of operatives in the Middle East
>after he reined in the CIA. It took us 30 years to set those sources up
>during/after WW2.

And none of them have been replaced in the 24 years since he left office?

Remember this: The main threat to the USA in Carter's time was perceived to be the Soviet Union. The new technology of spy satellites was thought to be adequate - and for many tasks it is. But it wasn't adequate for everything.
>
>>We've been told by Bush that we'll all be driving hydrogen cars - by when?
>
> We were told that in Popular Science in the 60's. Again, So what?

Simple: Rather than deal with the realities of energy policies, Bush tells us there is a cheap clean technological solution "just around the corner". Heck, he even had the governor of California fooled. (The Guvernator inquired about having a Hummer converted to hydrogen power. The cost was something like $250,000 - not including a source of fuel. Not exactly practical.)

Hydrogen *may* be a fuel of the future. But it's a long long way from being practical for today's problems or those of the near future.

Still, it sounds nice, makes for great photo ops and is a pleasant PopSci diversion from the reality that the US imports way too much oil, and pays way too much for it in the process. That payment isn't just in dollars per barrel.

>>And
>>that we'll have permanent moon colonies and manned missions to Mars in the
>>"near future". No mention of how it will be paid for, or what real benefits
>>will accrue. Heck, there isn't even a commitment to save the Hubble space
>>telescope or replace the shuttle.
>
> Again...all of this "forecasted" in the 50's and 60's.

And it hasn't happened because of the enormous cost and dubious benefits. But now Bush talks about it like we should make it a national priority.
>

Until Big Business steps in and says no.

The fact is, it's simply cheaper *in the short run* to manufacture things
elsewhere and ship them here. But *in the long run* it causes all sorts of
problems. Most of all, no *service* economy can prosper. People don't get rich
taking in each other's washing.

Are you better off now than 4 years ago?

>.Part due, in all honesty, to Bug's
>expenses...but most due to the Clinton taxes of the 90's. Personally, I got
>zinged in the Clinton era.

Think about *why*. Look at the deficit in 1980 and again in 1992. It wasn't Clinton who built that deficit. It was "trickle down" Reaganomics. But eventually the piper had to be paid.

And remember that it was Papa Bush who said "Read my lips...no new taxes" but then could not keep his promise because the numbers simply did not add up. Wasn't entirely his fault - he inherited the spiraling debt of his predecessor.

>
>>>We don't need Kerry. John Edwards had a chance...he just didn't bark

>>
>>When and under what circumstances was Kerry "side-by-side" with Hanoi Jane?
>
> The specific date? I don't recall. The articles from public media have
>circulated the web.

I suggest you look it up. The picture you refer to was taken in 1970. Jane Fonda went to Hanoi in 1972 - *TWO YEARS LATER*!!

Yet Kerry gets blamed and condemned because he was three rows behind and a few people to the right of a future possible traitor.

Do you see how the *facts* behind that picture completely change things? Had the picture been taken *after* the Hanoi trip, you might have a point. But it

was taken two years earlier!
>
>>If indeed such a thing happened, why is it any worse than Rumsfeld shaking
>>hands with and warmly greeting Saddam Hussein?
>
> Who cares?

I do. Rumsfeld was in the Reagan Cabinet at the time. The US *supported* SH in
those days, and turned a blind eye to his methods. You'd think we'd have
learned from the Shah and Iran.

>Hanoi Jane is a documented traitor.

Here's proof:

http://www.snopes.com/military/fonda.htm

>How Kerry, a combat vet, his opinions on the war itself notwithstanding,
>could sit next to a person who
>openly gave comfort to the people who were trying to proactively kill him is
>beyond me.

Simple:

1) He did not sit next to her
2) She did not go to Hanoi until *TWO YEARS* after the picture was taken.

See how just two little facts - dates - make all the difference?
>
> Those who protested the war had valid arguments.

Agreed.
>
> Bill Clinton even had a valid RIGHT to PROTEST the war, even in Oxford,
>England. Billary's error was at first saying he never did it then trying to
>claim the pictures weren't him.

He lied.
>
> If the gutless liar had simply stated "Yes, I was against the war and I
>exercised my right to protest it in a legal demonstration", even the most
>right-winged Hawk would ahve had to give him due for being honest about it.

He lied.
>
> Kerry earned the additional right to speak out...practical experience.

No, he didn't.

Everyone has the right to speak out. Kerry earned *credibility* because he
spoke from actual experience.

>But to sit down next to a low life slut who intentionally betrayed her
>Countrymen was foolish. I would have shot her first.

How would you have known what she would do two years in the future?

>well may be a business owner for all I know. But very, VERY few of those
>"rich" are what we would call "idle rich". They got that way because of
>businesses they ran, which means people they employed, products they sold or
>services they delivered.

If and only If they were Republican business folks. :-)

Democrats are idle rich evil people, money-grubbing tyrants
who can't do anything right... :-)

>>Please don't tell me you are so naive that you think that the wealthy always
>>pay a higher percentage in taxes.
>
> I didn't say they didn't pay an appropriate ir INappropriate percentage,
>Jim. I just said we seem to spend a great deal of erroft tearing these folks
>down.

"Erroft?" How does one "erroft?"

But, I DO see a lot of nursie's output tearing down any Democrat
within sight or hearing. Sort of like a General Order thing. :-)

>>Fortunately, one overhaul in social
>>security plugged one big hole...(SNIP)
>
> I agree with your summation about SS, Jim. Those who have more than six
>figure valuations should not have their hands in SS, period.

Are you trying to make all the "scum" homeless? :-)

Shouldn't you be ranting and raving about having all those
"six figure valuations" folks take a code test? :-)

>>Why is it that these "compassionate" conservatives can stand by and watch
>>school districts with 30 plus students in a classroom whilst a suburban
>>school has only 20 per class and every 8th grader receives a *laptop
>>computer* and honestly believe that everything is just fine? How did New
>>York state, in calculating aid to school districts, manage to count every
>>student in NYC as 0.7 student?
>
> On the otherhand I can attest to rather well funded public school
>programs in socioeconomically depressed areas here. Not every school system
>suffers such indignities, Jim. That you have to look to local school boards
>and state programs for as much as anything Washington generates.

Nursie must be suffering in a hotbed of democrats.

>>You are gullible at best.
>
> Why? Because I believe that people ought to be allowed to reach that
goal
>that we claim they can without penalizing them for it?

Properly accredited night classes would help...except nursie
thinks those are lowly, the scum of academia... :-)

> Jim, there ARE positive results from those folks' contributions OTHER
than
>directly to the tax base. I'd rather they be paying less in direct taxes and
>more in infrastructure for the businesses they run!

One way to begin cutting budget is to remove the pension for
those medically-discharged veterans who are physically fit
enough to fly airplanes, fly hang-gliders, do skating, jog 5+
miles with heavy rucksacks.

>>I'm not mad at you, just upset at priorities in
>>this country. Remember too that the whole world is watching this country to
>>see if our actions anywhere correspond to what we are saying. If I were a
>>European nation, I'd not only be a bit skeptical, I'd be nervous too.
>
> Are you now talking about Iraq or wether we tax the dickens out of the
>folks who provide our livelyhoods?

Nursie out of a job? No longer lively? Aw. Too bad.

Don't worry. Go fly an important CAP mission, run out the glider,
strap on the blades, do your physical thing to show everyone
who is the best barbarian of all.

By all means, forget entirely about broadband over power lines or
any of that technical stuff. Show everyone how damn good you
are in pin-pointing the cause of today's world woes after your long
political career and many terms of elected office.

And don't forget to harrass and denigrate each and every news-
group poster who disagrees with you. By any means possible.
That is your main mission in life. Don't shirk responsibility!

Temper fry...

Alun, wait until you attend some anniversary thing, like my
wife and I did in 2001 for the 50th Reunion of our senior high
school class in the midwest. Not only was that fun, it was an
ice-water bath on "wanting" to recapture one's youth...or, for
some others, to desperately seek to return. :-)

>If you listen to/read the lyrics of the whole song, you'll see that Ian
>Anderson saw it as no bad thing. What is truly pernicious, and constitutes
>the difference between him and them, is that so many morsemen want to drag
>others kicking and screaming into the past!

I suggested Brainwashing was responsible some time ago.

I've also said it was an extension of the human territorial
imperative - their "turf." They MUST defend turf! What they
did was so awesome, so perfect, and so hard, that all must
exactly emulate their mighty and powerful accomplishments!

Funny in a way. I described my military assignment at ADA
a half century ago - which I wouldn't care to repeat at all - and
all the beepers in here went bonkers. They screamed and
hollered, called lots of bad names, made snarly comments
about "trying to be superior, etc." when all it did for me was
to convert me from the previous opinion of radio as "belonging
to amateur style (of pre-WW2 days) as shown in ham mags"
into the reality of big-leagues HF radio communications. ADA
was only about the third largest in the Army net but it was
impressive as heck in 1953 with three dozen HF transmitters
and doing 220 thousand messages a month traffic in 1955.

The general commentary was probably based on simple
envy because only Hans Brakob in here has any comparable
military communications experience. Jim Hampton comes
close. Brian Burke was in military meteorology not
communications but the met guys need radio communications.
State Department isn't strictly military and most of the postings
of that "foreign service" person weren't to massive messaging
embassies. Since the U.S. military hasn't used manual
telegraphy for fixed-point to fixed-point communications since
1948, the PCTA got all angry and frustrated about not not
loving morsemanship or pledging allegiance to the key.
[from time to time the Armenian judges chanted and
demanded a recount...]

It got worse after my initial posting about military radio experience. My whole career was labeled in the worst possible light, even to one saying all I said was a "lie" and so forth...that I "disgraced the IEEE" by existing. :-)

It even got to the point where another professional in the industry started sneering and nastygraming about my (actual radio) experience as a design engineer...all because of not loving and cherishing morse...and for not following up on "life promises (always to be kept)" which became to bizarre for words. :-)

Now there are long, lonnng, lonnnnng posts on politics and very one-sided emotional diatribes of presidential candidates where all that bandwidth could have been used for the actual subject heading (BPL) which is a direct threat to anyone who uses HF. Not one peep (except from me and Mike Coslo) on the subject of BPL.

I guess that Raging Against People Never Met is the whole parcel of what this newsgrope is about...

The merits of the CW mode have been presented many times and in depth.

It wasn't the "new" hams that came up with RTTY, packet, satellite, PSK31 and the many advances in ham radio communications. Instead, it was the experienced hams. The experienced hams have moved on while the new, inexperienced hams are too often afraid to experience the full range of ham activities and deny themselves the ability to make judgements based on personal experience. Too often they instead listen to other inexperienced hams and make decisions based on incomplete and inaccurate data.

It was not the new hams that I heard last fall several days after the major flares and auroras discussing on SSB how they had to shift from PSK31 to CW as the auroral activity was causing terrible phase shifts in the PSK31 and how they had to wait to establish SSB communications until the effects of the flares had passed.

Just because some people are able to abuse the system, this doesn't mean everyone can succeed in doing so. There are some corrupt individuals at every level of society. It wasn't so many years ago when welfare fraud was making the news on a regular basis.

If you will check the IRS data, you will find that people in the top 5% of income provide over 50% of the income tax revenue collected by the government. The top 1% pay over 1/3 of the income taxes collected. The bottom 50% of the people pay less than 4% of the total tax revenues collected.

This is hardly letting the rich not pay. The ones who slip through the cracks or find ways to avoid paying are not representative. Unfortunately, they are news so we only hear the bad stuff.

There's always people who find ways around the system that does not mean they all do. To single out the rich smack based on a few frauds smacks of

class envy just as much as denigrating the poor because some of committed welfare fraud smacks of prejudice.

Hello, Len

Guess I get my dander up too at times. Certainly it is wrong to paint "all" Republicans or "all" Democrates or "all" of any one group with a wide brush. Not good at all. Besides, I've gotten led off-topic - not good at all.

I have figured it out, Len. The problem is we are dropping the Morse requirements. Dang, now my washing machine is going to over-suds again ;)

However, BPL should help the situation. If BPL is going to reduce power line noise (according to power companies), it should reduce my washer over-sudsing since it runs from the mains. LOL.

Have a good one!

Hello, Steve

I forget who wrote a book, but in it he admitted that the administration didn't know how to get out of Vietnam. Sometimes those things backfire (like, possibly, Iraq?). Boy, a lot of folks got upset that someone finally told the truth. I finally felt better about Vietnam; not happy, but understood it better and was able to let it go.

In any case, somehow folks don't like Kerry voicing his opinion that Vietnam was wrong - they convieniently forget that Bush pretty much avoided the service.

This is one thing I don't care for - follow the leader, regardless. Don't think. If you do, you might be called "waffling". Jump right in and agree with everything that is occuring. This is how Hitler came into power. By the time any Germans realized what was happening, it was far too late to voice their opinion (unless, of course, they wanted to be shipped somewhere they didn't want to go).

We need a strong military; but Russia poured almost all of its' resources into its' military and ultimately fell apart. Somewhere, somehow, moderation has to come into play our there will be heck to pay.

Some one asked about "What's good for General Motors is good for America.". I remember "Lil Abner" and in there the quote was "What is good for Bull Moose is good for America.". That guy was good - really good (unless, of course, what he was saying went over one's head - which happens a lot with the blind followers of the faith.)

I don't know whether they're teaching CW courses there or not, but I suspect you're referring to Fort Huachuca, in Arizona, which is headquarters for Army Intelligence training.

Spelling it is admittedly a bitch. I had to double-check to make sure I had it right, and I worked 'em during the Armed Forces Day cross-band MARS/Amateur activity a few years back (Fort Huachuca is also Western Area Gateway for Army MARS).

We have indeed debated the relative merits many times. I could make a case for other modes, but it isn't the issue. Nor is experience the issue here. If it were it would degenerate into analysing different kinds of experience. This in turn is entirely self-defeating, as usually only those who actually like CW have a lot of experience in using it. OTOH, I have held a ham licence for 24 years, which is a significant amount of time, but of course without using CW it doesn't count :-)

The issue is living in the past, harmless and perhaps even admirable in itself, but not something to force upon others if one has a proper sense of decency. Morse is an antiquarian mode, dropped by every other service. It does indeed have advantages, but then so does spark, and so does joining

two tin cans with a piece of string. Any self-respecting debater could make a good case for standing on hilltops waving semaphore flags.

In my musical analogy the aging rocker in the song 'wore his trouser cuffs too tight', but he didn't say we all have to dress that way. The 'morse forever' crew are effectively saying we all have to 'wear our trouser cuffs too tight' in the style of long ago. Ultimately, it's just an extremely silly point of view. However, if it weren't so deeply held we wouldn't be arguing about it. Unfortunately, it seems likely only to fade away along with those who beleieve in it.

Field Day is next weekend. Anybody in the group here have plans?

I'll be on the air with the Amateur Radio Association of the
Tonawandas as one of the W2SEX ops. We'll be running four stations
(CW, HF Phone, HF Digital, and VHF/UHF) plus doing SSTV, ATV, and APRS
demo modes, and we may also satellite contacts through SaudiSat I if
it makes a pass at a good time and we fall into its footprint.

Here's hoping we get to work some of you or your clubs' stations over
the weekend. 73 and good luck during Field Day.

Needless to say, I'll be absent from the NG over the weekend.

[oops...didn't complete that message!]

I hope they have cute little interchangeable UNIFORMS to go
with them. Scrubs, cammies, poopysuits, etc. That would make
them "authentic." :-)

>two tin cans with a piece of string. Any self-respecting debater could make
>a good case for standing on hilltops waving semaphore flags.

Heh heh heh. The collar insignia of the U.S.Army Signal Corps
is a torch over crossed signal flags...for the visual semaphores
used before the American Civil War. Both sides used exactly
the same signalling protocols during that War...not a heckuvalot
of "communications security" then!

That high-tech, all-weather commo system called the "telegraph"
was used then, too, but both sides forbade its use for "secure"
(encrypted) messaging because "telegraph lines were too easy
to intercept!" [I kid you not]

Yeah, like with that high-tech landline morse, there were "high-
impedance taps" either side could use to bug the other side?
Anyone just listening to the sounders (with or without knowing
morse) could detect when a tap was put on a line...same
sounder types were used on both sides and putting two on the
same line made a significant change in the sounder sound.

But, the visual semaphoring, rather older than new-fangled
telegraphy, was good, familiar stuff and everyone felt warm and
fuzzy using that...in clear!

A small vignette to illustrate that older ain't necessarily better
and the first commo system (semaphore) wasn't at all the "best."

On-off keying telegraphy was the ONLY way the first radios
could be used for communications. So, on the basis of being
the "first," the morse-aholics want to force "CW" on everyone
forever and ever for "tradition sake!"

Brain-dead emotionalism!

'Scure me, I gonna call up Aurora and tell her to quit messing
around with phase-shifting all that PSK31! Not nice.

Beep, beep...

As well as the demerits...

>It wasn't the "new" hams that came up with RTTY, packet, satellite, PSK31
>and the many advances in ham radio communications. Instead, it was the
>experienced hams.

Tsk, tsk. RTTY, packet, satellite, FAX, were all done by the
commercial radio services long before.

Peter Martinez, G3PLX, devised PSK31 in the UK and Yurp hams
did the trials and testings on the air. Took a while before the
"experienced hams" of the USA to try it out.

>The experienced hams have moved on while the new,

Such as that old familiar, "CW gets through when nothing else will?"

Actually, Brian Burke had it correct: "CW gets through when
everything else will."

Sunnuvagun!

>It was not the new hams that I heard last fall several days after the major
>flares and auroras discussing on SSB how they had to shift from PSK31 to CW

Oh, that nasty old phase shift!

I guess that the shortwave radio broadcasters doing DRM (Digital Radio Mondial) are all technically inept because they've been doing DRM testing successfully for a bit over three years now!

Guess nobody told them about nasty old phase shifts from auroras and stuff!

12 KHz commercial-military multi-voice-channel SSB has been working on HF since the 1930s. Guess nobody told those many HF sidebanders that nasty old aurora phase shift would shut them down, ey?

Sunnuvagun! and How About That?! :-)

>over-sudsing since it runs from the mains. LOL.

There ya go! :-)

But, speaking seriously on BPL. A Cedar Rapids ham group got
motivated and really organized for a measurement of a small
BPL trial installation in Cedar Rapids, IA. [the city may be a
familiar one as Collins Radio is located there]

Darn good Comment under docket 03-47 under 21 June 2004 in
the FCC ECFS. First part is long at about 1.3 MB, being the
certified by PE test report, second part is shorter, the text
comment itself.

I will give that Cedar Rapids group a large hand of applause for
their effort. Complete and to the point.

Refer to Brain Burke, N0MIND...I mean Brian Burke, N0IMD...He's the
progentiator of that bit of silliness.

>I'm personally aware of some areas where there are Neighborhood Watch
>groups using FRS radios, and at least one where an ARES group uses
>GMRS to communicate with the local NW group on FRS (the first seven
>channels are the same freqs).

Yes, those services ARE used...The point here is "major role". Those are
great ancilliary tools for end-users. They do not play a "major role" in
"emergency comms".

>I'm also personally aware of instances where FRS radios are used by
>ARES/RACES personnel or by government or emergency services personnel.

The only instance I know of FRS/GMRS bveing used by them is as a liasion
with non-Amateur services...quite practical, actually.

>this has been done, though.

Colorado Wing, Civil Air Patrol logged a rescue of several stranded hikers last summer who were in a deep, tree covered ravine. One of the hikers made it to a road, but couldn't retrace his course. The FRS radios were used to contact them and locate them...Worked like a champ.

>moderation has to come into play our there will be heck to pay.

Whole lot of factors going on there. The Soviets bureaucracy weighed them down
to the point they couldn't even feed themselves. The USSR was severely
devastated by WW2 - at least 20 *million* dead, half of them civilians. And
this was in the wake of Stalin's purges in the '30s.

The USA gets itself in the situation of being the world's policeman - unpaid,
while other countries spend their money on infrastructure, education, etc. And
resentments are sown all over the world.

>
>Some one asked about "What's good for General Motors is good for America.".
>I remember "Lil Abner" and in there the quote was "What is good for Bull
>Moose is good for America.". That guy was good - really good (unless, of
>course, what he was saying went over one's head - which happens a lot with
>the blind followers of the faith.)

The original quote came from Charles Erwin Wilson ("Engine Charlie") who was CEO for GM and then Secretary of Defense from 1953 to 1957 under President Eisenhower. During his Senate confirmation hearing, he stated "What was good for our country was good for General Motors, and vice versa."

In the wake of the Korean War, he cut the defense budget significantly.

He should not be confused with the Charles E. Wilson ("Electric Charlie") who was the CEO of General Electric and served President Truman as the head of the Office of Defense Mobilization.

All that and more from a guy who was so confused that he thought I was putting up an antenna at -his- house. Yup, he's got "real" military experience and never been in uniform. Another Walter Mitty wannabe.

Hmmmm. Maybe that's how it got on the best seller list already. They
never intended to deliver, and all of the orders thru Amazon just go
away.

Anyway, saying it is a best seller (without any actual delivieries)
just might make it sell better.

>So it's emotional, not based on objective facts with supporting evidence.

Part emotional, yes, but based on past experience with the Demoncratic
Party.

>Do you see the problem?

I do.

I also know Kerry has made public remarks that supported Fonda. Someone
was a bit creative with a camera...OK...Kerry's words were his own.

>> He diluted the chain of command.
>
>How, exactly?

By trying to have everyone be IN the pot, that's how.

There can only be so many people "in charge" at one time.

>>Part of the errors that occured in the
>>Iranian desert were directly the result of White House meddling in what
>>should have been an military operation.
>
>Agreed.
>
>But there were also errors that were the result of simple human error.

Yes, there were. Letting Jimmy Carter be in charge was one of them. Oh
well...That's democracy.

>> He further diluted the Nation's overt and cover security services with
>>"warm-fuzzy" Executive Orders that have, to this day, continued to leave
>>America blind and hog tied.
>
>Carter left office almost a quarter century ago. How could his old orders

>continue to cause such problems - particularly since 16 of the intervening
>years were those of the Reagan and Bush administrations?
>
>How could one president, in office for only four years, cause so much
>trouble?

Indeed. Ask any Southerner the same question.

You lived through the 70's...Jimmy Carter's economics and political
decisions almost bankrupted this nation, both financially and in fact.

Our Armed Forces were, if it's at all possible, in far worse condition
when he left office than when he entered.

We were humiliated in the Middle East, a reputation were have yet to
overcome.

We were saddled with double digit inflation.

Our intelligence services were cut off at the knees by Executive
Order...You asked how he could create so much havoc in four years...?!?! He
did this one in only a few days!

>> Jim, did you study any of the after-action reports out of Mogandishu?
>
>No. But you are avoiding the questions, Steve.
>
>How did Clinton "let them"?

I am not avoiding the question, Jim.

I secifically stated that Clinton tried to manipulate field operations
from Washington.

>Should the US have stayed out of that conflict? Or gotten more involved?
>
>What threat were they to US security?

None.

As much compassion as I have for hungry, sick people, I have very LITTLE
compassion for people who are hungry BUT can afford AK47's, RPGs, etc etc etc.

>>>What's the solution to the Iraq mess?
>>
>> Which one? I see several "messes" here...not just one.
>
>1) How do we extract ourselves from there?

We keep the promise to restore soverignty as we promised and when we are
asked to leave, we leave.

>2) How do we avoid such involvements in the future?

We don't.

If you truly believe the basic tenets of our own freedom and our public rhetoric to defend against tyrrany, we will always find ourselves extended somewhere.

>>> Why aren't the Iraqis grateful for their liberation?
>>
>> Be danged if I know.
>
>How about these reasons:
>
>1) They are embarrassed that their vaunted army fell apart so quickly -
>twice.

If they are pragmatic, they have nothing to be embarrassed about.

Those forces that did fight fought bravely. The rest were conscripts forced into trench warfare that had no hope of sustaining adefense against American force mobility.

>2) They are not really a country but a bunch of warring factions held
>together
>by a strongman. With the strongman gone, the factions are at each others
>throats again.

It's the way it's been for centuries. The current brood of Arabs blame the United States for thier plight, but anyone reading Middle Eastern history knows that is bunk.

>This isn't anything new - it's Yugoslavia all over again. Say,
>who was in charge during that war?

Bill Clinton.

The same Bill Clinton who insisted on "no ground troops" and got many of our folks killed because they could not maneuver with cover.

>>The people of that region, as rich as their culture
>>is (was?) is rife with despotic leaders who have been doing this to them for
>>centuries. If they weren't willing to shake the yoke off without our help,
>I
>>don't think our intervening was any more welcomed.
>
>Yet the Bush Administration went in expecting to be greeted like the US Army
>iberating Paris.

Oh...?!?!

You can show me where this was stated by them, Jim?

>> We lost our chance to really show who/what we were all about when the
>>looting and rioting started and we didn't protect the infrastructure, both
>>business and social, any better than what we did.
>
>How could that have been done? Why was it *our* responsibility?

We could ahve ID'd these landmarks and targeted them for immediate
security.

Yes, it was our responsibility. When we overthrew the Iraqi governmant by
force, WE became the force-of-law there.

>>> Who is responsible for the Al-Gharib abuses?
>>
>> Who indeed. I don't have any answers any more than you do.
>
>For a start, there's those who gave the orders. And those who put those
>people
>in charge. And those who didn't follow up.
>>
>>>> Kerry? He IS bad news and he'll continue to be bad news.
>>>
>Worse news than Al-Gharib?

What happened at Al-Gharib was humiliating, Jim.

What's even more humiliating is that some American's have forgotten just
how badly WE were treaten in Desert Storm.

I don't hear those voices who are being apologetic for Al-Gharib
apologizing for the bruises on Iraqi fists when our POW's intentionally ran
themselves into them over and over.

>>>Why? Because he's not a Republican? Because he opposed the war in Vietnam -
>>a
>>>war in which he *personally* fought?
>>
>> Because he's an apologist.
>
>Evidence, please?

Read the papers, please.

>> The time to fight or protest that war is long past.
>
>True. But the time to mend fences is still here. Is it wrong to apologize for
>past mistakes?

Over and over and over and....?!?!

Do we hold present day Germany's feet to the fire over Nazi atrocities?

When was the last time we hung a Japanese warlord for the "care" they
delivered to our troops?

It's time to move on.

>> He's one of those who STILL thinks we should be going around with our
>>tails between our legs, cowing and beying for forgiveness.
>
>Evidence, please?

Read the papers, please.

Listen to his speeches to the veterans organizations, please.

Listen to his speeches to any other number of liberal civil rights groups.

And before you jump on me about "Don't you support civil rights?", of course I do! What I DON'T support is the suggestion by some political "leaders" that we still hang our heads in shame almost a full generation out.

He was in-country. He killed North Vietnamese and VC. Let him travel to Hanoi and ofer himself as sacrifical lamb.

>> "Bush & Co." told us that based upon information gleaned from "inside
>>sources" that TOLD him there were weapons.
>
>Right. And other sources said there were none. The sources who said there
>were
>had a vested personal interest in seeing SH overthrown.

And some who said there were none also lied about other atrocities done by Hussein, because they stood to profit by playing THAT side of the coin.

>>That intelligence is not there due to the undermining of the
>>intellignece
>>agencies by Jimmy Carter. We lost hundreds of operatives in the Middle East
>>after he reined in the CIA. It took us 30 years to set those sources up
>>during/after WW2.
>
>And none of them have been replaced in the 24 years since he left office?

I am sure many have.

But ahve YOU read the memoirs and studies of Middle East relations since the end of WW2, Jim?

Carter's "withdrawl" from covert intelligence programs left hundreds of indigenous personnel hanging...literally...So why should they trust us now, only to watch us "pull the plug" when things get too dicey for the "current" admisnistration...?!?!

>Remember this: The main threat to the USA in Carter's time was perceived to
>be
>the Soviet Union. The new technology of spy satellites was thought to be
>adequate - and for many tasks it is. But it wasn't adequate for everything.

I disagree.

The state of political unrest in the Middle East was already of major policy concern two presidencies before Carter.

The OPEC oil embargo happened just before his "tour of duty". It was of major concern to all.

>>>We've been told by Bush that we'll all be driving hydrogen cars - by when?
>>

>> We were told that in Popular Science in the 60's. Again, So what?
>
>Simple: Rather than deal with the realities of energy policies, Bush tells us
>there is a cheap clean technological solution "just around the corner". Heck,
>he even had the governor of California fooled. (The Guvernator inquired about
>having a Hummer converted to hydrogen power. The cost was something like
>$250,000 - not including a source of fuel. Not exactly practical.)
>
>Hydrogen *may* be a fuel of the future. But it's a long long way from being
>practical for today's problems or those of the near future.

"Practical" is usually based upon mass production.

And President Bush is not the first to suggest that some scientific
breakthrough was close at hand. Billary made an announcement that there was a
breakthrough in AIDS research that was about to revolutionalize the care
delivered to those victims.

>Still, it sounds nice, makes for great photo ops and is a pleasant PopSci
>diversion from the reality that the US imports way too much oil, and pays way
>too much for it in the process. That payment isn't just in dollars per
>barrel.

Agreed. But as long as we insist on not harvesting OUR reserves yet are
willing to let the Arabs suck themselves dry, what are we to do.

This isn't news. This "crisis" has been in the wings for decades. People
a lot wiser than you or I have been promising this was coming, and they were
right.

I se this on the same par with the "drought" in the SW United States. To
whom is it a "surprise" that we are millions of acre-feet short of the needed
water supplies out there?

The proponents of desalianation were hushed up by politicos 20 years ago
who insisted that present infrastructure would support SW US needs well into
the 21st Century.

>>>And
>>>that we'll have permanent moon colonies and manned missions to Mars in the
>>>"near future". No mention of how it will be paid for, or what real benefits
>>>will accrue. Heck, there isn't even a commitment to save the Hubble space
>>>telescope or replace the shuttle.
>>
>> Again...all of this "forecasted" in the 50's and 60's.
>
>And it hasn't happened because of the enormous cost and dubious benefits. But
>now Bush talks about it like we should make it a national priority.

And why shouldn't we?

In the 50's and 60's we didn't have the technology. We barely had the
technology to get to the moon in the 70s.

History has shown us that most major "jumps" in technology and society
happen in the wake of war.

RECENT history has shown that we made some pretty significant strides
based on the Apollo program alone.

For those who insist that "we need to spend the money here", I ask WHERE
in space are you going to spend that money?

A bit of government subsidising would promote yet another wave of
technical advencement. I think the recent events in the Mojave also show that
a bit of entrepenurial spirit and investment can go a long way.

So why not Mars? Why not research stations on the Moon? Unless you want
to ressurect the "world is flat" or the "we never went to the Moon"
conspiracies, what other legit reasons can you think of to NOT do it?

>>>> Clinton and his bunch tried to make the economy look good with smoke
>>>and

>Think about *why*. Look at the deficit in 1980 and again in 1992. It wasn't
>Clinton who built that deficit. It was "trickle down" Reaganomics. But
>eventually the piper had to be paid.

Paid? I was ripped off by the taxes I got zapped with on what should have
been a very, very lucrative income.

>And remember that it was Papa Bush who said "Read my lips...no new taxes" but
>then could not keep his promise because the numbers simply did not add up.
>Wasn't entirely his fault - he inherited the spiraling debt of his
>predecessor.

That debt was due (mostly) to the military build up of the Cold War. We
had already started to "harvest" the "peace dividend" by the end of Bush Sr's
tour.

Also, much of the improvement in the economy at the end of Bush Sr's tour
was the result of technology advances made in 80's.

>>>>We don't need Kerry. John Edwards had a chance...he just didn't bark
>>>>as loud as Kerry. Too bad.
>
>You mean the National Ambulance Chaser? You might want to look into Mr.
>Edwards' record...

And Clinton wasn't? Clinton wanted to put an ambulance in everyone's
back yard but had no plan to do that, either...Instead he let his wife play
with it, and when she failed, it wasn't "his" fault.

>> The Dem's COULD do better. I would have had to think real hard about a
>>vote for Edwards. Too bad the loudest dog won rather than the better
>>candidate.

>Fonda went to Hanoi in 1972 - *TWO YEARS LATER*!!

I stand corrected on it then, however it still doesn't excuse his comments
condoning her conduct.

>Yet Kerry gets blamed and condemned because he was three rows behind and a
>few
>people to the right of a future possible traitor.

Why not?

I put Gore as almost as equally responsible for the humiliation suffered
by the Clinton-Gore administration for having not taken a stand against
Clinton's lying...Excuse me..."misrepresentations"...

He could have gone a long way towards promoting his own credibility by
distancing himslef from that affair (pardon the pun)

>Do you see how the *facts* behind that picture completely change things? Had
>the picture been taken *after* the Hanoi trip, you might have a point. But it
>was taken two years earlier!

I do.

Do YOU see the facts that a well known and respected celebrity whom those
very soldiers looked up to and admired actually helped to get some of them
killed...?!?!

>>>If indeed such a thing happened, why is it any worse than Rumsfeld shaking
>>>hands with and warmly greeting Saddam Hussein?
>>

>>claim the pictures weren't him.
>
>He lied.

Indeed...Over and over and over....

I believe the Oxford situation was the first item to hit the wires.

If he'd only had the intestinal fortitude to say "Yes, it was me...It was a legal protest and I broke no laws", then every other "story" that came along would have been dismissed...or at least given a more lenient "benefit of the doubt".

Overall, Clinton was an adequate president.

Unfortunately he couldn't seperate his duties from his ego, and he will be remembered as one of the most prolific liars in the office...He made a mockery of it.

>> If the gutless liar had simply stated "Yes, I was against the war and I

It's all a part of his "tuff guy" self-image. The only problem is the
rest of us don't see a tough guy. He's just another Walter Mitty
wannabe.

"Sir, First General Order: I will beep my key in a military manner,
keeping always on the alert for the NCI, dissing and cussing those
within sight and hearing. Sir!"

Like, "I voted for it before I voted against it."

Jump right in and agree
> with everything that is occuring. This is how Hitler came into power.

This is how the Dems operate. They gathered up all the stray cats and
dogs that have absolutely nothing in common, and tell them they must
vote as a block (no questions, no discourse, no disagreements) if any
one of them is to be given benefits. And it works. At least it did
for 50 years. But it's gone stale because the government cannot give
dignity with a benefit check. People need to actually work at
something that actually needs doing.

By
> the time any Germans realized what was happening, it was far too late to

We have been pouring most of our resources into education, social services, and prison systems for a long time. We now have the most highly educated foreign work force, and many of our "native" young men are in prison. Way to go, DEMs!

No, not the end of the story. But there would be no point in
discussing it with a closed-minded person such as yourself.

> Clinton was not removed from office.

Then what was the purpose of impeaching him? He thwarted the efforts
of honest people by not having the decency to leave.

What Clinton did was terrible to his
> wife and daughter,
I really don't want to know what he did to his wife and daughter. The
details of what he did to Monica was bad enough.

> but what damage to the country (other than a major distraction) did it do?

Our government and our monetary system is a confidence game. When our
leaders go south, our confidence goes south, and our economy goes
south.

> Are you so naive as to think that this huge deficit
> Bush is running won't hurt us?

Are you so naive as to think that we haven't seen huge defecits
before, even when they were for unnecessary social spending?

> Already some want to reduce social security
> more. It isn't that social security is broke (and it appears to be in a bit

> better shape than they thought,

But, assuming that you are a Social Security recipient, you just got a prescription drug benefit.

but as good jobs disappear and are replaced
> by near minimum-wage jobs, I wouldn't bet);

Yes, swapping out our manufacturing jobs for service jobs is the wrong path.

it is that the federal
> government has tapped the funds and issued IOUs to social security. They
> don't want to pay back money

They'll just print more. Remember the "confidence game?"

> to the folks that need it the most. Rob from
> the poor and give to the rich.

I'm beginning to think that I'll never be able to retire and spend my Golden Years learning fast code like I have wanted to. Instead I'll be working to support people who no longer work or never did work.

> Go figure; make $1,000,000 on the stock market and you only pay $150,000 in
> tax (15%). Now, go get a $60,000 a year job and see what you pay in taxes.
> Don't forget that over 7.5% social security tax you pay (and my pension is
> reduced slightly due to my employer's social security contribution.
> Retirement based on income above the tax base results in higher percentage
> payment.) when you figure your tax load.

I have been pondering the concept of "individual" and that of "corporation."

I'm told that a corporation has the rights of an individual.

A corporation has inputs and outputs. When the outputs excede the inputs, it is called profit. The profit is taxed.

An individual has inputs and outputs. All inputs are taxed.

> Well, we finally got our high-speed ferry here in Rochester. Like all other

I'm FD Chairman for W3YA and W3GA (GOTA). We'll be doing a scaled down Field day this year, as many of the people that usually help are committed to other things this year. We won't be able to put the big effort that we have for the past several years.

We'll be 2A running 100 Watts all stations, some hombrew OCF wire antennas, and a half wave vertical on 20 meters where the GOTA will be spending a lot of it's time. We'll be right in the Center of PA in a beautiful location in a big field.

We'll be doing SSB, CW, and PSK31.

One of the volunteers will be doing the cooking for the operators. We'll be well fed and with good food.

I'm really looking forward to FD this year, as it will be so different for us.

OK, modified statement to reflect your correct QTH would then read,
"Like Tennessee CAP where you are, or WHITE PEAK where I am."

>>I'm also personally aware of instances where FRS radios are used by
>>ARES/RACES personnel or by government or emergency services personnel.
>
> The only instance I know of FRS/GMRS bveing used by them is as a liasion
>with non-Amateur services...quite practical, actually.

With the ARES/RACES groups, that's the reason for having them, yes.
With government/emrgency services personnel there are of course other
reasons. Niagara County (NY) emergency management has GMRS portables
with the intent of using them for comms between the director and
assistant directors at the scene of an incident where they might be
called into action, or to hand to someone they themselves want to be
able to communicate with, as in the case of the one they handed to me
once last year (about five minutes after telling me not to come up on
their frequency with my own radio, hehe).

At the Thunder Over Niagara airshow a few years ago, members of one of
the local CAP groups (I believe it was a cadet wing) were using FRS
radios in the performance of their duties at the show (directing
traffic in parking lots, serving as gophers for the adults from the
composite wing at the info booth, and they also had a hamburger and
hotdog stand going). I asked one of them about it, and he told me they
used those little FRS radios a lot, even trained with them for SAR.

They were Motorola FRS radios fully loaded with all the bells and
whistles that were common on FRS radios circa 1999. At the time these
were going for about $150 each. There were about two dozen CAP members
around who had these clipped to the top shirt pockets on their BDUs.

>to a road, but couldn't retrace his course. The FRS radios were used to
>contact them and locate them...Worked like a champ.

So the guys I met at NF aren't the only CAP personnel equipped with and using FRS. Motorola (or someone) must appreciate the business, because for SAR work they're probably NOT going out and buying the cheapest radios they can find (or at least I hope they aren't).

The other EmComm group I'm with (other than Erie County ARES/RACES), which is the public service and emcomm team sponsored by the ham radio club I am a member of, is also starting to equip with the combined FRS/GMRS portables that have been hitting the market recently. Our thinking is quite simply, if it is capable of maintaining comms (with hams and non-hams) it might come in handy, and at the inexpensive prices these can be had for, it's worth the investment since you never know when something like that will come in handy.

We will be a 5F station plus GOTA in CA. I have the GOTA station
responsibilities.

GOTA will be on 40M thru 144 MHz. Phone, Data, and some CW (if we can find a
CW op with no HF experience)

400 GOTA QSOs seems a bit high considering we will try and teach newbies how
to operate. I think it is more important to tutor folks on HF and the
digital modes than to run the 400 QSOs. Perhaps we can do both.

For the GOTA station we will try PSK31 and RTTY for demo to newbies and of
course to make contacts.

Wonder if the 20M PSK31 segment will be jam packed and contacts will be
feasible ??
Any PSK31 activity besides 20M for FD ???

This will be our first year trying the digital modes.

Any comments on PSK31 during FD ???

It's not that BPL will reduce power line noise but rather that the companies
must reduce the noise to get BPL to work!!

Well I hope to be participating in our club's Field Day activities but it's
iffy at this point. It depends on when my doctor schedules my surgery,
which I won't find out until Thursday. If he picks Friday, well there goes
Field Day weekend.

Oops, GOTA stations aren't on VHF, Shadow. The rule is:

4.1.1.6. The GOTA station may only operate on the Field Day HF Bands.
Only one transmitted signal is allowed from the GOTA station at any time
(see Field Day rule 4).

So you are pretty much stuck to HF.

> 400 GOTA QSOs seems a bit high considering we will try and teach newbies how
> to operate. I think it is more important to tutor folks on HF and the
> digital modes than to run the 400 QSOs. Perhaps we can do both.

It is high. The nice thing about the GOTA is that newbies and the
inexperienced can hone their skills without affecting the more seasoned
operators. My first field day was before the days of GOTA, and I knew
very well that I was holding the score down a bit with my slowness. GOTA
removes that. It's a great way to get started or get back in action.

PSK31 was a BIG hit last year for us. People are in general, very
receptive to the chat room type atmosphere on PSK31. A person that might
be shy to talk will often be happy to type to another op.

It was also a great way to contribute to the final score, since PSK
contacts are worth 2 points each. I'm glad to see another mode that can
get 2 points per QSO. Actually, I wish that all contacts were 1 point
each. That won't happen for a long time tho'.

PSK activity on 20 meters was pretty decent last year. There was enough
traffic that we just stayed on 20. And by the time the band was finished

for the night, the GOTA station was closed down.

You might try 40, but I've never made a PSK contact there. 80 meters at night is pretty fair for PSK31, so if you can rig an antenna there, you should make some QSO's.

What bothered me is that since Clinton lied about something so unimportant,
what might he do to cover up something that was much more important.

At the time, I had several German friends and they were totally baffled
about why he bothered to lie. To some extent, this probably hurt his
standing with foreign leaders though my memory tells me that as a whole
Europe loved Clinton.

The GOTA station is not limited to people with no HF experience. It is for
people with little experience or who have been off the air for a while.

Hi Mike -- well the FD rules read:

4.1.1. Any Class A group whose entry classification is two or more transmitters may also operate one additional HF station without changing its base entry category, known as the GET ON THE AIR (GOTA) station.

4.1.1.1. This station must operate using a different callsign from the primary Field Day station.

4.1.1.2. The GOTA station may be operated by Novice, Technicians or generally inactive hams under their existing operating privileges, or under the direction of a Control Operator with appropriate privileges, as necessary. Non-licensed persons may participate under the direct supervision of an appropriate control operator. A list of operators and participants must be included on the required summary sheet to ARRL HQ.

4.1.1.3. This station may operate on any valid Field Day band and mode. As per FCC rules, this station must have a valid control operator present if operating beyond the license privileges of the participant using the station.

THIS SEZ TO ME WE CAN OPERATE THE VHF BANDS

4.1.1.4. The maximum transmitter output power for the GOTA station shall be 150 watts. If the primary Field Day group is claiming the QRP multiplier level of 5, the maximum transmitter output power of the GOTA station may not exceed 5 watts.

4.1.1.5. A maximum of 400 QSOs made by this station may be claimed for credit by its primary Field Day operation. A 100-point bonus may be claimed by the primary Field Day operation if the GOTA station reaches the 100 QSO level.

4.1.1.6. The GOTA station may only operate on the Field Day HF Bands. Only one transmitted signal is allowed from the GOTA station at any time (see Field Day rule 4).

THIS SEZ TO ME WE CAN OPERATE ON HF BANDS BUT NOT WARC BANDS

4.1.1.7. The GOTA station does not affect the additional VHF/UHF station provided for under Field Day rule 4.1.2.

4.1.1.8. Participants are reminded that non-licensed participants working under the direction of a valid control operator may only communicate with other W/VE stations or with stations in countries with which the US has entered a third-party agreement.

4.1.1.9. GOTA stations operate under a single callsign separate from the callsign of the main group.

4.1.1.10. The GOTA stations does not qualify as an additional transmitter when determining the number of transmitters eligible for the 100-point emergency power bonus under rule 7.3.1.

4.1.1.2. The GOTA station may be operated by Novice, Technicians or generally inactive hams under their existing operating privileges, or under the direction of a Control Operator with appropriate privileges, as necessary. Non-licensed persons may participate under the direct supervision of an appropriate control operator. A list of operators and participants must be included on the required summary sheet to ARRL HQ.

4.1.1.3. This station may operate on any valid Field Day band and mode. As per FCC rules, this station must have a valid control operator present if operating beyond the license privileges of the participant using the station.

So I read that as we can operate VHF no problem.

Well the rule sez:
4.1.1.2. The GOTA station may be operated by Novice, Technicians or generally inactive hams under their existing operating privileges, or under the direction of a Control Operator with appropriate privileges, as necessary. Non-licensed persons may participate under the direct supervision of an appropriate control operator. A list of operators and participants must be included on the required summary sheet to ARRL HQ.

How one interprets "generally inactive hams" is beyond me.

I just got off the phone to the ARRL. The fellow there confirms that
the GOTA station is HF only. No VHF or UHF. If you want to confirm:

860-594-0232

Thanks Mike -- scratch the 6M beam and 2M beam -- Thanks Mike

I called the ARRL and sure enough they sed no VHF for the GOTA station

Glad I posted here and got the ARRL rules figured out

Sincere thanks

Thanks, Jim

I like getting good information rather than a lot of arguements based on
"hot air" (of course, I've never done that LOL sure ... believe that and
I've got some prime ocean front property in North Dakota to sell you - or a
bridge in New York).

I've gotten so irritated over some happenings that I tend to sputter a bit.
Thanks for a good reply.

Kind regards,
Jim AA2QA

A couple of questions beg to be answered; perhaps you'd be kind enough to do
so.

1) Why do we have the highest rate of incarceration in the world?
2) What does Morse code have to do with it (other than, of course, causing
my washing machine to over-suds?)

Best regards from Rochester, NY - and don't strain the brain

"A bit creative with a camera!" Photo fraud is more correct

That's like someone who claims "hostile action" experience in
the military and NEVER reveals the when or where those took
place.

>>> He diluted the chain of command.
>>
>>How, exactly?
>
> By trying to have everyone be IN the pot, that's how.
>
> There can only be so many people "in charge" at one time.

Nursie was THERE, day to day, saw it all, testified, etc.

>>>Part of the errors that occured in the
>>>Iranian desert were directly the result of White House meddling in what

>>>should have been an military operation.
>>
>>Agreed.
>>
>>But there were also errors that were the result of simple human error.
>
> Yes, there were. Letting Jimmy Carter be in charge was one of them. Oh
>well...That's democracy.

Gotta love this nursie...total tunnel-vision linearity and absolute
incredible amnesia to actual, investigated causes of the
hostage rescue effort failure do to a combination of MISTAKES
IN THE FIELD.

>>> He further diluted the Nation's overt and cover security services with
>>>"warm-fuzzy" Executive Orders that have, to this day, continued to leave

>asked to leave, we leave.

[almost made it on sovereignity, but not quite...]

Ahem. The USA invaded Iraq. Really. It was in the papers.

This time the USA wasn't defending Kuwait.

Normally that is called INVASION. [bad guys do invasions]

Nobody asked the USA to INVADE Iraq.

Think about that. [if possible]

>>2) How do we avoid such involvements in the future?
>
> We don't.
>
> If you truly believe the basic tenets of our own freedom and our public

>rhetoric to defend against tyrrany, we will always find ourselves extended

Gotta love these foreign policy holders, er, I mean experts who
KNOW all about the middle east. :-)

>>This isn't anything new - it's Yugoslavia all over again. Say,
>>who was in charge during that war?
>
> Bill Clinton.
>
> The same Bill Clinton who insisted on "no ground troops" and got many of
>our folks killed because they could not maneuver with cover.

Yup. Chief of Stuff lecturing. :-)

>>>The people of that region, as rich as their culture
>>>is (was?) is rife with despotic leaders who have been doing this to them

>for
>>>centuries. If they weren't willing to shake the yoke off without our help,
>>I
>>>don't think our intervening was any more welcomed.
>>
>>Yet the Bush Administration went in expecting to be greeted like the US Army
>>iberating Paris.
>
> Oh...?!?!
>
> You can show me where this was stated by them, Jim?
>
>>> We lost our chance to really show who/what we were all about when the
>>>looting and rioting started and we didn't protect the infrastructure, both
>>>business and social, any better than what we did.
>>
>>How could that have been done? Why was it *our* responsibility?
>
> We could ahve ID'd these landmarks and targeted them for immediate
>security.
>
> Yes, it was our responsibility. When we overthrew the Iraqi governmant
>by force, WE became the force-of-law there.

So...it is okay for the W administration to INVADE a country
just because W felt a "responsibility?"

Yup. We sure stopped those damn Weapons of Mass Destruction!

>>>> Who is responsible for the Al-Gharib abuses?
>>>
>>> Who indeed. I don't have any answers any more than you do.
>>
>>For a start, there's those who gave the orders. And those who put those
>>people
>>in charge. And those who didn't follow up.
>>>
>>>>> Kerry? He IS bad news and he'll continue to be bad news.
>>>>
>>Worse news than Al-Gharib?
>
> What happened at Al-Gharib was humiliating, Jim.
>
> What's even more humiliating is that some American's have forgotten just
>how badly WE were treaten in Desert Storm.

"Treaten?" Which is it, Desert Shield or Desert Storm?

Desert Storm didn't last long enough to get American prisoners.
Desert SHIELD did. Tsk, tsk, tsk. The Chief of Stuff doesn't
know his important Operational code names!

> I don't hear those voices who are being apologetic for Al-Gharib
>apologizing for the bruises on Iraqi fists when our POW's intentionally ran
>themselves into them over and over.

Poor nursie. Getting entangled during his outrage rants. Tsk.

>>>>Why? Because he's not a Republican? Because he opposed the war in Vietnam
>-
>>>a
>>>>war in which he *personally* fought?
>>>
>>> Because he's an apologist.
>>
>>Evidence, please?
>
> Read the papers, please.

"Show us your papers!" :-)

>>> The time to fight or protest that war is long past.
>>
>>True. But the time to mend fences is still here. Is it wrong to apologize for
>>past mistakes?
>
> Over and over and over and....?!?!
>

>
> When was the last time we hung a Japanese warlord for the "care" they
>delivered to our troops?
>
> It's time to move on.

Nursie know all about nasty NAZIs and South Pacific. From those
"hostile actions?"

>>> He's one of those who STILL thinks we should be going around with our
>>>tails between our legs, cowing and beying for forgiveness.
>>
>>Evidence, please?
>
> Read the papers, please.
>
> Listen to his speeches to the veterans organizations, please.
>
> Listen to his speeches to any other number of liberal civil rights
>groups.

Riiiight. All "lies!" :-)

[you didn't say "please" on the third sentence...tsk]

> And before you jump on me about "Don't you support civil rights?", of
>course I do! What I DON'T support is the suggestion by some political

>"leaders" that we still hang our heads in shame almost a full generation out.

Nursie had "hostile action" in 'Nam?

> He was in-country. He killed North Vietnamese and VC. Let him travel
>to Hanoi and ofer himself as sacrifical lamb.

As long as W isn't getting his teeth examined, we could send W.

Another "hostile action" hero. :-)

>>> "Bush & Co." told us that based upon information gleaned from "inside
>>>sources" that TOLD him there were weapons.
>>
>>Right. And other sources said there were none. The sources who said there
>>were
>>had a vested personal interest in seeing SH overthrown.
>
> And some who said there were none also lied about other atrocities done
>by Hussein, because they stood to profit by playing THAT side of the coin.

[getting wayyyy too deep there... :-( ]

>>>That intelligence is not there due to the undermining of the
>>>intellignece
>>>agencies by Jimmy Carter. We lost hundreds of operatives in the Middle
>East
>>>after he reined in the CIA. It took us 30 years to set those sources up
>>>during/after WW2.
>>
>>And none of them have been replaced in the 24 years since he left office?
>
> I am sure many have.
>
> But ahve YOU read the memoirs and studies of Middle East relations since
>the end of WW2, Jim?
>

>
> And why shouldn't we?
>
> In the 50's and 60's we didn't have the technology. We barely had the
>technology to get to the moon in the 70s.

Try 1968, like 27 December. Circumnavigation.

Try 1969, like 16-24 July. First landing.

Ranger 7 went to the moon in 1964. Unmanned.

If you don't know what you are talking about, don't try to sound off
like Werner von Brawn.

> History has shown us that most major "jumps" in technology and society
>happen in the wake of war.

Go for it, noted anthropologist and expert on socio-political whatsis!

Radio as a communications device first demonstrated in Italy
and Russia in 1896. A war there before that?

Morse-Vail Telegraph opened for commercial telegrams in 1844.
Three decades after War of 1812. "Wake" rather settled by then.

De Forrest invents "audion" the first triode tube in 1908. WW1
hadn't been ignited yet.

First SSB communications (Netherlands to Netherlands Antilles)
opened BETWEEN world wars.

> RECENT history has shown that we made some pretty significant strides
>based on the Apollo program alone.

Such as?

Common, von Brawn, shows us your "scientific" side.

> For those who insist that "we need to spend the money here", I ask WHERE
>in space are you going to spend that money?

Astronauts will "eat out." :-) [see Jimenez, Jose...]

Or, we will spend it all on filters to get rid of BPL noises.

In case herr doktor von Brawn has forgotten it, this thread is
supposed to be about Broadband over Power Lines.

> A bit of government subsidising would promote yet another wave of
>technical advencement. I think the recent events in the Mojave also show
>that a bit of entrepenurial spirit and investment can go a long way.

AT Mojave airport, ace. [Kern County Airport #7 to be exact]

North of Edwards AFB. Been to both places. Ace, will, of course
say he's been there too! :-)

> So why not Mars? Why not research stations on the Moon? Unless you want
>to ressurect the "world is flat" or the "we never went to the Moon"
>conspiracies, what other legit reasons can you think of to NOT do it?

Common, nursie, tell us your tales of aerospace and promoting
the space program! Show us what you got!

>president against my hatred for Jane Fonda?

Poor nursie. Went to see "Barbarella" as a kid and got thrown out
for leering at the screen? Ever since, an intense hatred against
Jane Fonda?

Gots NO idea where the intense hatred of Democrats come from.

None of this involves Broadband over Power Lines... :-)

Who was it inventing stories about "seven hostile actions?"

Was it the seven dwarves?

Who was it claiming "Sorry, Hans, MARS >>IS<< amateur radio?"

Despite the DoD Directive and three specific military branch regulations - and - the FCC not having any definition of MARS?

Poor baby. Keeps saying everyone else "lies" yet is the biggest LIAR in here.

The only persons "interested in radio" are licensed amateur radio operators according to the commissioned extra in here. One cannot be "interested" without that license...despite having spent a whole working career involved in radio-electronics as a pro and as a hobbyist.

Nursie keeps doing the insult thing over and over and over and over again...then demands "respect" and "honor" for being

such a terrific radio op (amateur). Nursie never in Army, never worked military radio comms, but he KNOW all about them. Amazing.

Nursie not saying much about BPL (this thread's subject). He too busy trying to ethnically cleanse political world of all evil, wicked, mean, and nasty Dems.

Republicans are trying to force BPL on the USA and thereby polluting HF for years to come. No problem, nursie will just point pudgy finger to some Democrat and blame BPL all on them.

Gotta love the "meaningful discourse" in here. Wish there was some... :-)

Dee, it's best you go into the FCC ECFS and look at the text of
NTIA's Phase 2 report. [you can also get it at the NTIA website]
Then look at the Iowa amateur club comment of 21 June 2004
where the test measurements indicated BOTH power line noise
and OFDM BPL signals.

Tsk, tsk, tsk.

So, geographically-challenged nursie, just WHERE is this "Mogandishu?" [hint: it isn't in Somalia]

Is that one of those places where you had "hostile action?"

Or was that a location of MARS "amateur headquarters?"

Tell us all about the geography of nursieworld...

Don't know. I once talked with a heraldrist, or whatever they call
those who work on insignia, patches, etc. I don't think there's
much relation of heraldry and bible things...such as an insignia
representing a "jawbone of an ass."

That would fit, though. :-)

Or, maybe, crossed swords on a field of dreams?

Now, don't tell us you actually downloaded Part 15?!?

You had somebody help you navigate there, didn't you?
Fess up. You are too ANGRY and emotional to navigate
the web by yourself.

> Of course you know this...You've "threatened" to get on 20 meters with a >Part 15 legal "station" before.

No, not "threatened." DID it many times. All the HF ham bands
from 80m on up to 10m using an antenna impedance analyzer.
Radiating RF as all such analyzers do. Also at LEGAL RF power
levels.

You could have discerned this from a particular Ham Radio magazine
article that described programs for an HP-25 pocket scientific
calculator to measure antenna impedance, coaxial cable
characteristics, etc., using an RF Noise Bridge. Another Anderson
did translation of those HP-25 programs to Texas Instruments
(forward notation arithmetic, not RPN) and that was published.

But, in your usual warm, witty, nice-guy manner, you will diss and
cuss, call names, and generally come unglued all about a 22-year

independent ham publication being "defunct" and worthless and
then say I "cut-and-pasted from others' works." :-)

> You never carried through, though...Just like a dozen other "promises"...

What are those "dozen other promises" nursie?

Did I sign any "promisory note?" A contract? In lots of years of
existance, I've changed my mind several times. Back in 1952 I
was working as a commercial illustrator and decided to voluntarily
enlist the U.S. Army. That exposure - to really BIG HF comms -
changed my mind. After studying commercial illustration out here
(Art Center School of Design, old campus on 3rd Street, not the
present one in Pasadena) I changed to engineering. Never looked
back. Worked in aerospace here since 1956, got experience,
got schooling, got responsibilty in design work, had to do the
field engineering thing from time to time that forced attendance
in night classes (all properly accredited) to make up for day
class absences. Difficult to do that when having to work at
regular day jobs.

After my first wife died (brief marriage) I promised myself I would
never get married again, be a bachelor. Was one a long time.
Then I got re-acquainted with my high school sweetheart after a
long total absence and "broke that promise!" ["broke" in the
nursieworld term, a near capital crime in that strange fantasyland]
Best man at my wedding was Al Walston...he's still around, still
has callsign W6MJN. Sunnuvagun! How about that?

Nursie, you've dissed, cussed, called vile names on everything
I've written about in here. Problem you have - besides the angry,
rampant demonstrated sociopathy - is that all I've written is
factual, can be referenced by documents held by others or by
others still living who were there, with me at the times I've told
about. That's the terrible mountain of truth you cannot climb.

Life isn't established at birth with some ironclad specification
that all must, forever hold to some "promises" made long ago
or even yesterday. Events and experiences happen that will
change conditions, change opinions, change minds, and lots
of those happenings aren't in our control. We have to ride them
out, survive. We CAN survive WITHOUT being always angry at
others or trying to tear down others for having opposite opinions
or more wide-ranging experiences.

Sadly, you've chosen to remain angry, to insult others who've
expressed opposite opinions, tried to tear down what they've
accomplished (and been able to validly reference). You've tried
to bully, demoralize, denigrate others by some strange game
of newsgroup "conquest" game, yourself telling outright lies
and distortions of truth without being able to reference such.

That hasn't worked. Your perceived "enemies" are still here.

This should not be a forum to express personal hatred of others, but you do an observable job of turning it into one. You have NO authority to force anyone to your wishes, yet you continue to demand such while insulting everyone who does not "obey" you. For that, you get no respect, no honor, nothing but emptiness from readers who won't bother to come in as participants in this forum.

This newsgroup could cover some important issues in amateur radio. Access BPL is a spectre looming in the near future to inhibit the HF communications world. Is there any discussion of that? No, very little. Things segue to petty political polarization involving presidential candidates, shouting and hollering, each party calling the other an "evil" that must be eradicated or mankind is doomed. Silly stuff.

Docket 04-140 is being commented on for some (relatively) minor changes in Part 97. Any comments on that? No.
No less than 18 Petitions have been filed on much larger changes in Amateur regulations...yet all the "discussion" is one-sided insult fest of all the status-quoists desperately trying to maintain regulations as they were, at all costs, through personal insults against those advocating change.

Change WILL happen. All the vile name-calling, angry shouts and veiled threats won't stop it. Change can't be stopped, but it can be steered, directed into new vectors that are more navigable, better suited for the majority and those yet to enter the activity.

Yes SIR! [geez, I forgot the "sir" part...been away too long from
the military (since 1989 and lovely Fort Irwin, heh heh)]

Gosh, Brian, we be "drudges" according to a high-society
civilian (king of the katapults) who dines with Captains and
then shoots bears for navel intelligence while on navel
maneuvers.

Got an extra frag grenade? I think I need some practice there,
too. Need to prune down the wild growth on the chain of
command in here. :-)

No sweat on BASS...had that down just dandy a long time ago
when the sight picture steadied down and "a few ounces of
finger pressure" reached out and touched the bull. Lots of
"bull" in here. All paper tigers, too, just like paper targets.

Too bad you "were not in Somalia" and I was just a "rear area radio clerk" but ol grizzled gunnery nurse did "seven hostile actions!" [he "has it in his wallet"] {probably along with that elastomeric thing that is ready for more "action"]

I wonder where "Mogandishu" is? I don't think it is in Somalia. I've heard of Mogadishu" but nursie keeps mumbling about "Mogandishu"...

Sorry, I meandered. Forgot this newsgroup is supposed to concentrate on presidential politics and how evil, wicked, mean and nasty them Dems are. Too bad this newsgroup couldn't discuss amateur radio matters or serious issues like Broadband over Power Lines or the upcoming rules changes in Part 97.

I think this newsgrope is only for licensed political amateur operators, all of whom have credentials in economics, politics, and statesmanship, plus much experience IN office! Yeah, that's it: Rec.republican.amateur.professionals!

Beep, beep

Dunno about "My Life," but Rev. Jimmie Who said a few years
back that Amazon was going bankrupt or something about
"no profit."

Amazon sure does a LOT of advertising for a "non-profit"
company.

I'm glad my wife got her order delivered last week before
Amazon went under. [free shipping again...too bad the
League couldn't do that when commercial companies did]

"Supply Sergeant" has a website. Anyone can get those
geegaws. And uniforms. Even if they didn't, anyone can join
the good 'ol boys in the TN STATE guard, meet once a month
and act like sojers in da woods.

Gunnery nurse said "I couldn't possibly have one of my four
ribbons" because those weren't issued after WW2. Strange,
I just looked in the closet and there it was, still with the other
three just like it was in 1956.

Well, nursie say you weren't in Somalia, either. Not nice thing
to say. His fantasyland apparently doesn't have such a territory
but reality does. Fantasyland has lots and lots of "credentials"
all with lovely flowery borders on nice paper (suitable for framing)
but it don't got a First Phone (commercial) there in light blue.
Commercial licenses must not exist in nursieworld.

Wonder if nursie ever got that "military handset" to go with the
paramilitary pack special from SGC on an SG-2020 kit? Would
be real boss to have him do GOTA in cammies, helmet, with a
real (first time) military handset that can slide up inside the
helmet when pressed to the ear. He can do "military comms"
almost for real on FD!

Maybe Amazon will have a special DVD on that event...before
they go bankrupt (again)?

So it's really not about John Kerry as it is about Democrats vs.
Republicans.

That's not necessarily "wrong" or "right". In the end, what an
election comes down to is "who do you trust more?" Because regardless
of somebody's record, once they're in office it's a matter of trust
because you can't watch every issue and action. And you can't stop
them in time anyway.

That's why folks are/were so ticked off at Clinton and Nixon. They
betrayed the trust.
>
> >Do you see the problem?
>
> I do.
>
> I also know Kerry has made public remarks that supported Fonda.

Where? When? What exactly were the remarks?

> Someone was a bit creative with a camera...OK...

No, they weren't.

The picture at the Valley Forge VVAW rally is real. (Another photo is
faked, but the one most often seen is real). Kerry is there, three
rows behind Hanoi Jane.

The point is that the surrounding information (date of the picture and
HJ's trip) are left out, and the picture presented as being *after*
that trip, rather than 2 years before.

You fell for it. Many others did, too. That's the problem.

>Kerry's words were his own.

Which words?

Remember that when Fonda got back from Hanoi, nobody here really knew
the whole story. It was only when the POWs got back, years later, and
told of what she'd done and the consequences that the whole mess
became public.

Going to Hanoi wasn't the problem, it's what she did there.

> >> He diluted the chain of command.

Nope.

Carter was the inheritor of what his predecessors hadn't dealt with:

LBJ started the mess by getting the USA committed to the "space race", Vietnam and his "Great Society" social programs all at once - without raising taxes enough to pay for them.

Nixon continued the game, and tried to tame the problem with wage and price controls. Worked for a while - until the wage and price controls came off.

Ford - remember "WIN" buttons and catchy slogans like "Whip Inflation Now" and "Let's all be a little less piggy"? Didn't work, because the root causes weren't being addressed.

On top of this, OPEC caused the price of oil to jump twice - 1973 and 1979. The first time, gasoline went from around a quarter to around a half-dollar, and the second time it went over a dollar. (At least in the Northeast). Diesel and fuel oil had similar jumps. Worse, the supply was limited.

Meanwhile, American products suddenly found themselves competing with foreign imports in a number of areas - cars, electronics, clothing, even steel.

All of that pushed inflation and interest rates through the roof. Which made the deficit situation that much worse.

None of that was Carter's fault.

How would YOU have dealt with it?
>
> Our Armed Forces were, if it's at all possible, in far worse condition

You mean Iran? Think about why that happened. We supported a tyrant because he was friendly to us and not the Soviets. Same story as in the Phillipines and elsewhere. The Iranians finally got so ticked off they toppled him.
>
> We were saddled with double digit inflation.

See above for why that happened.

You could still set up a separate VHF/UHF station though. Our club often does and anyone with a Tech license or higher could be a control op of that station.

But we didn't. That's proof that those in charge thought we'd be welcomed as liberators, and that the people would behave as Iraqis, not as factions.

>Yes, it was our responsibility. When we overthrew the Iraqi governmant
>by force, WE became the force-of-law there.

Yep. So a mistake was made at the highest levels, not realizing that the civil order would fall apart so quickly.

You're ready to blame Carter and Clinton for mistakes that happened on their watch, but not Bush for far more severe mistakes that happened on *his* watch.
>
>>>> Who is responsible for the Al-Gharib abuses?
>>>
>>> Who indeed. I don't have any answers any more than you do.
>>
>>For a start, there's those who gave the orders. And those who put those
>>people in charge. And those who didn't follow up.

Right up to the top. Did you know that the White House has had *civilian* lawyers overruling JAG lawyers as to interpretations of the Geneva Convention?

>>>>> Kerry? He IS bad news and he'll continue to be bad news.
>>>>
>>Worse news than Al-Gharib?
>
> What happened at Al-Gharib was humiliating, Jim.

Yep. It was a serious mistake. It undermines the whole mission.
>
> What's even more humiliating is that some American's have forgotten just
>how badly WE were treaten in Desert Storm.

That's not the point.

Abuse of our prisoners 13 years go does not validate our abuse of prisoners today. If we really are on a higher moral plane that SH, then we cannot stoop to his level.
>
> I don't hear those voices who are being apologetic for Al-Gharib
>apologizing for the bruises on Iraqi fists when our POW's intentionally ran
>themselves into them over and over.

Two wrongs don't make a right. Al-Gharib simply tells the other side that we're as nasty as they are - and validates them doing even worse.

>Hanoi and ofer himself as sacrifical lamb.

Why? He was following orders. The real blame belongs to those who gave the
orders.
>
>>> "Bush & Co." told us that based upon information gleaned from "inside
>>>sources" that TOLD him there were weapons.
>>
>>Right. And other sources said there were none. The sources who said there
>>were
>>had a vested personal interest in seeing SH overthrown.
>
>And some who said there were none also lied about other atrocities done
>by Hussein, because they stood to profit by playing THAT side of the coin.

Sure. But it turns out that no WMD have surfaced, nor connections to terrorist
groups.

Bush listened to the wrong people. Carter did the same thing when he listened
to Henry Kissinger (who said we should allow the shah to enter the US) rather
than his other advisers (who said such an act would enrage the Iranians).
Allowing the shah to enter the USA is what caused the embassy takeover and
hostage taking.

btw, remember the Iran/Contra and weapons for hostages deals? Gues who did
those.....
>
>>>That intelligence is not there due to the undermining of the

>composite wing at the info booth, and they also had a hamburger and
>hotdog stand going). I asked one of them about it, and he told me they
>used those little FRS radios a lot, even trained with them for SAR.

CAP has had a lot of in-fighting about FRS. Since FRS is "civilian" and
we are under NTIA, there's been a lot of arguing about the legalities of it.

Part of the argument has been cooled off by CAP's acceptance of the use of
FRS for non-USAF missions and "public service" activites.

The other half has been cooled off by NTIA's authorization of our access
to ISR. Altho still pricy by FRS standards (About $80/piece) CAP units can buy
the ICOM ISR radio and use it without any restrictions for CAP purposes.

Some Wings are allowing individuals to buy thier own and even have a
buy-back program for those who decide to leave the program. It's illegal for
private use.

>So the guys I met at NF aren't the only CAP personnel equipped with
>and using FRS. Motorola (or someone) must appreciate the business,
>because for SAR work they're probably NOT going out and buying the
>cheapest radios they can find (or at least I hope they aren't).

I'm not sure if the CO event was with a CAP-owned device or if it was one
borrowed for the purpose. Communications with persons in distress is the only
time a CAP unit can communicate via FRS while on-mission.

Sorry to break in on a comment that I didn't see the first time here, Len.

If a person believes that President Carter's economic and political
policies almost bankrupted the country, I would suggest looking up the
historical date of August 15, 1971. See what happened on that date, and
the consequences of that action.

I'll see if anyone knows this one before giving it away.

How do you make this assumption, Jim?

It could ALSO mean that we considered ourselves to not have the resources
to spread out and just took a chance that the local police forces would hold
together.

However if it was my neighborhood that just had foreign tanks roll up on
it, the last thing I, as a non-combatant, would do is brandish a weapon, law
enforcement officer or not.

>>Yes, it was our responsibility. When we overthrew the Iraqi governmant

READ THE PAPERS, JIM!

>> Do we hold present day Germany's feet to the fire over Nazi atrocities?
>
>Actually, yes. Germany was kept divided for decades for that reason. The
>German
>constitution had to be approved by the Allies before it could be ratified by
>the German parliament.

Jim, Germany was kept "seperate" because part of it was held hostage by
the Union of Soviet Socialist Republics.

When the Berlin Wall (and other man-made obstructions) were removed,
Germany was reunited.

>> When was the last time we hung a Japanese warlord for the "care" they

I don't think that Political Photoshopping is a small deal.

> The point is that the surrounding information (date of the picture and
> HJ's trip) are left out, and the picture presented as being *after*
> that trip, rather than 2 years before.
>
> You fell for it. Many others did, too. That's the problem.

Another version of Gore's "Invention of the Internet" lie.

I have an logical disconnect with this sort of thing.

Why is it wrong for a president to lie about having gotten fellatio (
Which I agree is wrong)

YET!

It is perfectly acceptable to continue the LIE about Gore saying he
invented the internet, or showing a faked picture of Kerry and Jane
Fonda together coupled with another LIE about the date on which the
picture was taken - even though that picture was never taken in the
first place. It's perfectly to do a smear campaign on the patriotis

And that is just three examples I can call up without thinking too hard
about it.

Seriously folks, Think for yourself. If you are willing to accept every
story that your "group" sends down the wire, you will be hoodwinked.
Lying to advance your parties agenda is not moral or right. I've lived
around some people that have ruined their lives by lies, starting small,
then turning compulsive. It's where we are today, when so-called
Liberals are the cause of every problem on the face of the planet. They
aren't.

Ahh it's the time of year when I wake up Monday morning with CW in my head ..... I only do this once a year as I don't really like to put my hand on an anvil and hit it with 5 lb mallet. But like I always say what ever floats one's boat. The W3CSL ..Monessen Club will be on the air from the Mon-Valley YMCA picnic grove. Catch those who are so inclined on the air.

Good luck .. Be safe ...God Bless ...

Nursie be idiot. Still.

Idiot just doesn't understand my original purpose about amateur radio policy. Nursie never will, too determined to FIGHT with anyone who disagrees (even the slightest) with him. Tsk, tsk.

Those who want to FIGHT all the time just aren't right in the head...aren't like average, normal folks. No "degree" or pretty license document needed to see that.

Poor nursie. Never been involved with the larger world of radio, only other amateurs and posturing, always FIGHTING. I've been in the larger world of radio for half a century. Radio is not a magical mystery to me nor is communications of any sort by visual or audible means,

Despite your FIGHT-challenging Phrazors, no one needs to be some kind of federal merit badge in amaterism to talk, discuss, or consider laws and regulations on radio subjects. That sort of demand is for weak-minded idiots who can't debate anything requiring intellect above and beyond 16 neurons.

Nursie, you don't show any evidence of being able to intellectualize a damn thing. You can be shown government documents defining describing and detailing a radio service and you still REFUSE to accept that. You call all who disagree with you for "liars." You want to have physical confrontations with some who disagree with you. In short, all you want to do in here is FIGHT. That's insane.

Get some help. Get some tranquilizers. Whatever. It's tiring to come into this forum and finding you FIGHTING with others all the time, talking crazy things. Nuts.

Best I could do is offer a DVD of "Klute" (Jane plays "Bree Daniels"
in that one, a hooker). I can only hope that nursie takes the part
of "Tom Bannerman." :-)

[only movie buffs will get that one...:-)]

Hmmm...I wonder what exactly for?

>What's this about a "few ounces of pressure?" Backchannel stuff?

Nah. Been out in public in here twice, few months ago and a few
years ago.

Nursie wanna posture and threaten wid sojer skills, like shooting.
"A few ounces of pressure" refers to the trigger squeeze force.
Tuff macho tawk.

Poor nursie don' know I qualified expert on the range against
paper targets...paper tigers are about the same. [more dang
gun ranges out here, folks would be surprised at how strong
the NRA be in this neck of the woods]

It's kind of bad in here when these non-commissioned extras
want to turn all the "meaningful discourse" into a macho
shouting and hollering match over personal grudges. This
forum MIGHT be useful to actually talk about amateur radio,
even radio in general, and regulation issues and the like.

Nope. Idiot nursie gotta play schoolyard games accusing
all his "opponents" of "lying." Tsk, tsk, tsk.

Maybe he wants to be six years old so he can set a record
of becoming the youngest extra in the USA? :-) :-(

LHA / WMD

I know. I feel like Dashan in China studying under a master by
this correspondence. So far I'm doing straight-As. :-)

"Dashan" is a Canadian who is fluent in colloquial Chinese and
does contract work there for Chinese government and Chinese
businesses on their national TV. Was in the national press a few
days ago. That has nothing to do with amateur radio policy, but
neither is all the political blabber about presidential candidates.

> Idiot just doesn't understand my original purpose about amateur
> radio policy. Nursie never will, too determined to FIGHT with
> anyone who disagrees (even the slightest) with him. Tsk, tsk.

I understand fine, Lennie.

You hate Amateur Radio and Amateur Radio licensees. That's blatantly obvious.

Some Amateur made a fool out of you at some point in time (not that THAT is hard to do...) and you are determined to antagonize the rest of us as long as you can.

No problem. I understand fine.

Here's MY "purpose"...It's a proven fact that those who bark the loudest or longest are usually the one's who get the most attention.

You have taken it upon yourself to try and discredit ANY contributions to technology, public service, emergency communications or education and training that Amateur Radio offers.

It's vile, repugnant, and untruthful.

As long as you deem it your "purpose" to do so, I will do MY best to expose you for the antagonist and mistruthful putz that you are. It's not fighting, Lennie. It's self defense.

It really is THAT simple.

> Those who want to FIGHT all the time just aren't right in the
> head...aren't like average, normal folks. No "degree" or
> pretty license document needed to see that.

Then you're admitting you have a problem, Lennie?

You're up to YOUR neck in fighting. You intentionally harass a group of people involved in a practice that you clearly have no vested interest in nor do you have anything constructive to offer.

> Poor nursie. Never been involved with the larger world of radio,
> only other amateurs and posturing, always FIGHTING. I've
> been in the larger world of radio for half a century. Radio is not
> a magical mystery to me nor is communications of any sort by

> visual or audible means.

Seems to me you're the one who brought the fight in, Lennie.

You were offered SEVERAL apologies and offers to move on, but your answers were clearly designed to simply perpetuate an argument.

You have nothing to offer. Never did...never will...Your only "argument" is that other radio services don't use Morse Code, ergo Amateur Radio should not.

Proof once again that you dont understand a lot of what Amateur Radio is about.

But that's just par for the course.

> Despite your FIGHT-challenging Phrazors, no one needs to be
> some kind of federal merit badge in amaterism to talk, discuss,
> or consider laws and regulations on radio subjects. That sort of
> demand is for weak-minded idiots who can't debate anything
> requiring intellect above and beyond 16 neurons.

The difference here, Lennie, is that I have experience in Amateur Radio.

You don't.

You are still determined to see that Amateur Radio heels to your barked order despite having no real idea of what Amateur Radio is or what it's really all about, save for what you read on websites.

Amateur Radio is NOT the "aerospace industry".

Amatuer Radio is NOT PLMRS, GMRS, FRS or MURS.

Amateur Radio is NOT military communications.

Amateur Radio is NOT "commercial" or "professional" communications.

I'd dare say that everyone else in this forum EXCEPT you knows those things and accepts them, yet you keep trying to force Amateur Radio into one of those molds.

It won't work.

> Nursie, you don't show any evidence of being able to intellectualize
> a damn thing. You can be shown government documents defining
> describing and detailing a radio service and you still REFUSE to
> accept that. You call all who disagree with you for "liars." You
> want to have physical confrontations with some who disagree with
> you. In short, all you want to do in here is FIGHT. That's insane.

The only thing here "insane", Lennie, is your refusal to act your age. And that's considerable.

I already acknowledged the enabling directives of MARS. They are not in question. YOU are the idiot for trying to argue that they are.

MARS, without the thousands of volunteer Amateurs who man it, would not be able to carry out those duties those directives require. Period. Only a major manpower restructuring in the Armed Forces would allow it, and under present circumstances, that is highly unlikely.

And I don't need to "intellectualize" anything.

(Nice touch, byt the way, Lennie...lamenting my allegedged inability to "intellectualize" with yet more profanity...THAT was truly "intellectual")

As for being a liar, Lennie, if you would tell the truth and stop your antgonistic constructs, I wouldn't have anything to work with.

You have been repeatedly caught not telling the truth.

You make accusations and assertions you cannot/will not substantiate.

You assert that you intend to do things, but then never do them.

> Get some help. Get some tranquilizers. Whatever. It's tiring to
> come into this forum and finding you FIGHTING with others all the
> time, talking crazy things. Nuts.

Then stop posting obviously inflammatory, profane, obnoxious and incorrect stuff, Lennie.

We don't care how well you can candy coat your rants with cut-and-pastes from other websites. Life DOES exist outside of websites, although you seem to insist that if it's "on the website", that's the end of it. How foolish.

We don't care about how many messages you watched flash across the teleprinter in 1953, or how many jobs you held. We don't care about some articles you had published in a magazine that failed, nor do we care about your manufactured experiences in aviation or emergency communications.

You have zero-point-zero experience in Amateur Radio. None.

You accuse ME of doing nothing but "fighting", yet name calling, accusations and harrassment is ALL you have rendered up, even to those who treat you with respect or patience.

Sorry you can't be happy, Lennie.

>first place.

It's not OK. And as bad as Clinton's lie was, it wasn't as bad as Nixon's "I am
not a crook" lie and surrounding coverup.

Note that there are *two* Kerry/Fonda photographs. One is real, the other
faked. The real one seems to prove a point until you find out it was taken 2
years before Fonda went to Hanoi - then it proves a very different point.

> It's perfectly to do a smear campaign on the patriotis

>then turning compulsive. It's where we are today, when so-called
>Liberals are the cause of every problem on the face of the planet. They
>aren't.
>
Neither are conservatives the cause of every problem.

Your advice is right on, Mike. But remember that it's a natural human trait to want easy, quick answers to complex problems, And it's even more attractive if someone else or some other group can be blamed for a problem.

And there *is* a tie to BPL in all this. BPL advocates are trying to sell it as a cheap, easy, quick solution to the broadband access problem. The administration is trying to sell it as a way back to the technoboom of the '90s, without a lot of tedious mucking about with infrastructure. Trying to tie it in with homeland security is a classic example of adhomineming those who oppose it. 'Those dern pinko liberal antenna-huggers!'

Interference? Reliability? Spectrum pollution? Too complicated!

Well, Field Day presents many opportunities and I think it's great to capture as many as possible. Least of all, Field Day is "competition." Now, this isn't to say that the concept of competition isn't a good one to inspire and encourage folks to really get involved and be innovative with their ideas for communications on Field Day. BUT, Field Day is also the one time of year when as much exposure--related to competition, scoring, or not--is afforded to the non-amateur community.

So, just because your plans for using a VHF GOTA station aren't embraced by the ARRL Rules for Field Day; if you have enough team members to commit to taking care of the responsibilities of a VHF GOTA station--go for it! I think it's a great idea to have as many modes as can possibly be presented; again, IF one has the personpower to still take care of Field Day AND include some non-sanctioned stations on Field Day!

Thanks Kim -- we will have the GOTA station operate 10M, 15M, 20M, and 40M. Modes -- phone, CW, Digital - PSK31 and RTTY.

Our setup will feature demos such as QRP projects, Magnetic loop antennas, a bicycle generator, solar panels, and a test station for HT evaluation. We will have demos of aftermarket improved antennas for HT's and several homebrew 2M -- 440 MHz projects.

In addition we will have the ARRL video on Ham radio. Another video shows our repeater site and antennas and the inner workings of the repeater - duplexers etc.

Also we will have a demo computer loaded with popular Ham software -- four PSK31 programs, RTTY programs, DX Atlas, code practice, DX4WIN, NCDXF/IARU beacon program and several more for folks to try in the demo mode.

Booklets are prepared for Echolinlk, IRLP, and a booklet on "What is Ham Radio" and how to obtain a license.

Ham classes are held here periodically and we will have a handout sheet giving signup details.

Our PR person has distributed posters all over town and we have alerted the media of the FD event -- both TV and newspaper.

Last year we had a prime spot on local TV showing our FD activities including our participation in the Southern California fires.

So we are ready to go --expect well over 100 plus folks to show up.

Am disappointed that the GOTA station can not operate VHF. Would be a great opportunity to demonstrate 2M SSB and 6M operation if we had some sporadic E propagation.

But the main stations setup will include a VHF/UHF/Satellite station. ATV and APRS will demo as well.

Thanks to the group for the help and suggestions.

> Neither are conservatives the cause of every problem.

No they are not. But I see that as the difference these days. Everyone
makes mistakes, every group can have a problem and a plan that simply
won't work. I would never blame all the problems on Conservatives or
Republicans. I share too many of their values. (mostly fiscal and
smaller government) But it isn't the other side blaming everything on
them. They (mostly NeoCons) are blaming *everything* on *everyone* else.

> Your advice is right on, Mike. But remember that it's a natural human trait to

Simple answers for simple minds. Sounds great until you try to apply it
to the problem at hand.

I suggest putting your VHF etc station close to the GOTA station. That way people will see it and check it out. People are also intrigued by seeing a Morse code operator so you might have your overall layout designed to lead people from station to station.

Dee D. Flint, N8UZE

I agree 100% on the purpose of GOTA but I think you guys both
misunderstand this rule:

"4.1.1.5. A maximum of 400 QSOs made by this station may be claimed
for
credit by its primary Field Day operation. A 100-point bonus may be
claimed
by the primary Field Day operation if the GOTA station reaches the 100
QSO
level."

The GOTA station is limited to a *maximum* of 400 QSOs. You cannot
count GOTA QSOs for credit beyond 400.

I think the reason for this rule, and the very loose definition of who
can run the GOTA station, is to keep the GOTA stations busy yet
focused on the truly inexperienced.

If you work *at least* 100 GOTA QSOs, you get 100 additional points
beyond the QSO points themselves.

So the strategy is to work exactly 400 GOTA QSOs. That's less than 17
per hour if you go straight through. 17 per hour is more than 3
minutes per QSO.

The big problem with the GOTA station in a 5F group is interference.
It's bad enough when two stations of different modes try to use the
same band at the same time, but when the GOTA folks show up on the
same band....

Of course there are rigs and techniques that can handle all that RF.
But that's another subject...

>
> I understand fine, Lennie.

Nursie not understand.

> You hate Amateur Radio and Amateur Radio licensees. That's blatantly
>obvious.

No. Amateur radio is a fine hobby, interesting, a fine recreation
with great technological learning capabilities.

Except to a few, such as nursie.

Nursie does NOT "represent" all or even a part of United States
amateur radio. Nursie only represent himself. Nursie is also
obsessive-compulsive personality hater unable to control himself
in here when opposed by anyone.

> Some Amateur made a fool out of you at some point in time (not that THAT
>is hard to do...) and you are determined to antagonize the rest of us as long
>as you can.

I do not "antagonize the rest of 'you'" unless the "rest" are just
alternate personalities of nursie.

I DO antagonize the conservative traditionalists, the status-quoists
who demand everything in a hobby conform to their personal
desires.

I DO antagonize those who have a compulsive disorder known
familiarly as "control freaks" who seek to dominate others by any
means possible. Those are simply wanna-be dictators.

> No problem. I understand fine.

Nursie not have enough neurons to connect "understanding."

Nursie just wanna FIGHT.

> Here's MY "purpose"...It's a proven fact that those who bark the loudest
>or longest are usually the one's who get the most attention.

Nursie just wanna FIGHT. Nursie FIGHT anyone who have opposite
opinions of nursie's.

Bark, bark, bark, little nursie.

> You have taken it upon yourself to try and discredit ANY contributions to
>technology, public service, emergency communications or education and training
>that Amateur Radio offers.

Praising Peter Martinez for innovating PSK31 isn't "discrediting."
An excellent adaptation of coding theory and hardware to produce
a minimal-bandwidth on-line teleprinting in the same bandspace
as manual telegraphy.

Praising Dan Tayloe for his novel mixer excellent for minimal-parts
DC receiver use isn't "discrediting." [patent is still pending but it
has been written up in industry journals - RF Design magazine]

Praising Mike Gingell for his polyphase network that enables
SSB generation-demodulation with excellent unwanted sideband
suppression using relatively coarse-tolerance components is not
"discrediting." [Mike Gingell earned a PhD for that work back in
the UK, now lives in the USA]

There is nothing at all "discrediting" about showing FANTASIES
to be fantasies of the imagination.

Nursieworld is full of fantasies.

Education in the radio arts is not accomplished by pretending that
amateur radio is some paramilitary service organization or that
memorizing the advertisements and radio reviews in QST is
"learning" what happens behind the front panels...or that amateur
radio "always comes to the rescue during emergencies when all
the other radio infrastructure 'fails.'"

> It's vile, repugnant, and untruthful.

Living a life of fantasy is simply delusional. It serves no one, not
even the fantasy believer.

> As long as you deem it your "purpose" to do so, I will do MY best to
>expose you for the antagonist and mistruthful putz that you are.

Tsk, tsk, tsk. Nursie back into name-calling mode, trying to "win"
newsgrope arguments by some kind of "show of force."

Every issue under discussion has many sides. One side, the one
nursie believes, is NOT divinely ordained to be only the True one.
Sad for nursie, but true.

Nursie abhors opposition, wants to dominate, wants to win at all
costs, wants to FIGHT.

United States amateur radio is not a military organization whose
purpose is to fight for the country.

United States amateur radio is a non-pecuniary avocational activity
involving radio. It is a hobby, an enjoyable hobby for most
participants...but a substitute military service for a very few such
as nursie.

>It's not fighting, Lennie. It's self defense.

Nursie only FIGHTING for his own twisted ego.

> It really is THAT simple.

True, except nursie no see own obsessive-compulsive behavior
syndrome.

>> Those who want to FIGHT all the time just aren't right in the
>> head...aren't like average, normal folks. No "degree" or
>> pretty license document needed to see that.
>
> Then you're admitting you have a problem, Lennie?

No "problem" here except nursie wasting everyone's time by
pretending to be a "representative" of U.S. amateur radio and
"defending it" against all nursie-perceived "enemies of the
state." Tsk, tsk, tsk.

Nursie on bad route to self-righteousness. Very bumpy for
nursie, hope she is wearing an athletic bra for safety...

> You're up to YOUR neck in fighting.

...by entering this newsgroup, EVERYONE enters an arena of
outraged PCTAs busy trying to preserve the honor and glory of
a soon-to-be DEFUNCT communications mode. It is a FIGHT
arena inhabited by punch-drunk olde-fahrts thinking they are
all Rocky running up the museum steps to stirring music. :-)

Nursie be outraged, very bent out of shape when encountering
strong personalities who don't agree with him/her. Poor nursie.
Nursie go to signpost, point to Twilight Zone and say he/she is
representing all amateurs, therefore any opposition to nursie be
dishonor, discredit, evil, wicked, mean, and nasty to every
single 700+ thousand U.S. amateur radio licensees!

Nursie got bad, bad obsessive-compulsive disorder. Must be
post-traumatic stress disorder from all those "hostile actions"
in the service. Nursie is nuts.

>You intentionally harass a group of
>people involved in a practice that you clearly have no vested interest in nor
>do you have anything constructive to offer.

Poor nursie, still bent out of shape.

Nursie not playing well with others.

Typical traditionalist-conservative status-quoists with an ego complex larger than Cheyenne Mountain. They not understand that amateur radio cannot remain in the shape it was when all those olde-fahrts were young. OFs out of shape but pretending they are still young.

> Seems to me you're the one who brought the fight in, Lennie.

Only to those poor ego-driven souls who abhor change is there any "fight." Only to those traditionalist-conservative status-quoists does change represent some kind of "fight" that must be done to preserve their fantasies. To anyone else it is simply debate.

Amateur radio regulations were established by people, not gods or chiefs of stuff of some paramilitary organization. Regulations, standards and procedures all evolved, changed with time. That will continue to change as time goes on. There is NO divine purpose to stop change.

Change is opposed by those who managed to meet OLD standards and procedures of long ago. They cannot, will not adjust. They fear change. Change manifests insecurity for them. Or, they are so ego-driven that they fantasize their individual accomplishments as so mighty and noble that they think of themselves as role-models for all.

> You were offered SEVERAL apologies and offers to move on, but your answers
>were clearly designed to simply perpetuate an argument.

No. Not on record. Nursie has not admitted that either of his statements about MARS being amateur radio are wrong, nor has he/she ever admitted to reading any of the military documents defining and explaining MARS...nor has nursie identified any part of Title 47 C.F.R. defining MARS as a civilian radio service.

Nursie has never revealed the when and where of any claimed military "hostile action" yet demands full and complete disclosure of all others...for any claim. Nursie be a hypocrite.

Nursie continually insults others' private and professional lives clearly designed to induce word FIGHTING and then tries to say "others did it first!" Nursie be an insulter and hypocrite.

Nursie want to be center of attention. Ego drive. Uses all palaver in here to divert from real debate he cannot handle, will not handle if it is against his own precious opinions.

> You have nothing to offer.

Nursie make imperious demand. Tsk, tsk, tsk.

Nursie not moderator in here. Nursie not moderate.

Nursie stuck on one train of thought, not understand derailment
of long ago.

>Never did...never will...Your only "argument"
>is that other radio services don't use Morse Code, ergo Amateur Radio should
>not.

Quite incorrect. Error. False.

Arguments against retaining the amateur radio code test have been
multiple and many. They are on file with the FCC and may be
viewed by any of the public. Over 90 filings there concerning the
manual telegraphy test elimination.

> Proof once again that you dont understand a lot of what Amateur Radio is
>about.

Nursie have personal fantasy of "what amateur radio is all about."

Few understand nursie's fantasy. I do not...can only describe
symptoms of nursie's obsessive-compulsive behavior and
constant activity of personally insulting all who disagree with
nursie.

Amateur radio is well explained in many places, not a secret thing
revealed only to a hierarchy of nobles. Nursie not noble, is his own
hierarchy. Amateur radio is many many things to many many
people. Nursie not only one, not nobly or godly to say nursie
"represent" all those many.

> But that's just par for the course.

Amateur radio is not golf.

Amateur radio doesn't have the balls for it. :-)

> The difference here, Lennie, is that I have experience in Amateur Radio.

...and a very large fantasy in addition to pretty certificates (suitable
for framing).

FCC not require staff or commissioners to be radio amateurs in
order to regulate amateur radio in USA.

Nursie have god-like fantasies of control, to have nursie opinions
that of all amateur radio. Nursie be nuts.

> You don't.

Never said I did. :-)

Just the same, I was on the staff of Ham Radio magazine after
being an author-contributor.

At the mention of that, nursie will go immediately into ATTACK
mode, all safeties off, insulting all the staff of HR for being a
"defunct" publication...even after 22 years of existance as a

self-sustaining independent periodical for radio amateurs.

Nursie will then change gears and say I cribbed all information
("cut and paste" in his words) and had "none of my own."
Nursie not understand any of the articles, too much intellect
for him, therefore author become "enemy of state" to be
destroyed (by any means possible). Poor nursie.

> You are still determined to see that Amateur Radio heels to your barked
>order despite having no real idea of what Amateur Radio is or what it's
>really all about, save for what you read on websites.

"Heels to my barked orders?!?!?" :-)

Tsk, tsk, tsk. Nursie do word-phrase stealing. Plagiarism from
my postings. :-)

Nursie think amateur radio all about manual telegraphy or code
testing? Not so. Elimination of code test is my main concern.
That is happening. Very slowly but it is happening. First break
in mighty Amateur damn was in 1990. Small trickle of no-coders
entered ham radio in 1991, are now the largest class group in
U.S. amateur radio.

Sunnuvagun! How about that?

2003 saw another break at the WRC. 18 Petitions concerning
code testing now awaiting an NPRM at the FCC. Change IS
happening. Nursie hates that, upsets fantasy. Poor nursie.

> Amateur Radio is NOT the "aerospace industry".
>
> Amatuer Radio is NOT PLMRS, GMRS, FRS or MURS.

Not even amateur? :-)

> Amateur Radio is NOT military communications.

NO?!? Which is it? Is MARS amateur radio or is it military radio?

> Amateur Radio is NOT "commercial" or "professional" communications.

Amateur radio operates by the same physics as every other radio
service. True. It's in all the textbooks.

Amateur radio is the last venue for manual telegraphy.

Pity the OFs whose world is coming to an end with elimination
of the code test. Boo hoo.

> I'd dare say that everyone else in this forum EXCEPT you knows those
>things and accepts them, yet you keep trying to force Amateur Radio into one
>of those molds.

Tsk, tsk, tsk. Electrons, fields, and waves don't respect human
egos nor government licenses. They keep on truckin to their own

laws. Won't work in nursieworld fantasies. Poor nursie.

> It won't work.

Electrons, fields, and waves DO work in reality. Regulations are
needed BECAUSE they don't obey human laws. Tsk, tsk.

> The only thing here "insane", Lennie, is your refusal to act your age.
>And that's considerable.

Poor baby. Can't argue with grown-ups anymore? :-)

Nursie imagine being a six-year old extra? :-)

Difficult for me to act six years old. But, a lot of folks in here do.

Too bad.

> I already acknowledged the enabling directives of MARS.

And how was that done? Must have been by private courier or
other means "obscuring the information." :-)

If amateur radio goes away, MARS can remain. All that is
required of DoD is then to update Directive 4650.2. :-)

>They are not in question.

Yes they are. Nursie gotta ADMIT he was wrong.

[unlikely to happen, but it might be an Event if so... :-)]

>YOU are the idiot for trying to argue that they are.

No. If anything nasty be said about me, it is because I keep on
opposing fantasies blabbered by nursie. :-)

> MARS, without the thousands of volunteer Amateurs who man it, would not
be
>able to carry out those duties those directives require. Period.

MARS has done well WITHOUT those volunteers in exercise
Grecian Firebolt 2002. They are still doing so in 2004.

Sunnuvagun! How about that?

>Only a major
>manpower restructuring in the Armed Forces would allow it, and under present
>circumstances, that is highly unlikely.

Okay, Chief of Stuff, explain THAT gem?

The U.S. military has a very large communications organization
that is done by military personnel. Doesn't involve MARS at all.
Does all the tactical and strategic communications for the military.
Very big. Army Signal Center is at Fort Gordon, GA.

MARS can go away today and not impact any missions of the
U.S. military.

> And I don't need to "intellectualize" anything.

You don't seem to be able to do that. All the readers see is you
personally insulting others who differ with your godlike opinions.

> As for being a liar, Lennie, if you would tell the truth and stop your
>antgonistic constructs, I wouldn't have anything to work with.
>
> You have been repeatedly caught not telling the truth.

"Truth" in nursieworld definition is 'anything nursie thinks.'
That's not of reality, but then neither is nursie intellect.

> You make accusations and assertions you cannot/will not substantiate.

Another redefinition. Tsk, tsk. Anything, however slight, against
nursie opinions are considered "accusations and assertions" in
nursieworld. Yawn.

> You assert that you intend to do things, but then never do them.

I'm still working on anti-gravity, still being held down by something.

> Then stop posting obviously inflammatory, profane, obnoxious and
>incorrect stuff, Lennie.

Tsk, tsk, tsk. Nursieworld must be a strange place, glad I can't
enter it to see such redefinitions of words! :-)

> We don't care how well you can candy coat your rants with cut-and-pastes
>from other websites. Life DOES exist outside of websites, although you seem
>to insist that if it's "on the website", that's the end of it. How foolish.

Nursieworld must not have an Internet. Has lots of fantasies, though.

> We don't care about how many messages you watched flash across the
>teleprinter in 1953, or how many jobs you held. We don't care about some
>articles you had published in a magazine that failed, nor do we care about
>your manufactured experiences in aviation or emergency communications.

Nursie just doesn't want opposite opinions!

Everyone with opposite opinions LIES! :-)

Nursie = nuts.

Temper fry...

>
>> Interference? Reliability? Spectrum pollution? Too complicated!

Not complicated at all.

BPL will be the demise of low-level-signal HF communications in
urban areas. Kiss off any thoughts of signal-to-noise ratios
required in modern receivers. All that advanced technology will
go to waste. Hams can go back to using one-tube regenerative
receivers, those being as "low-signal-level" as any other in an
RF cesspool of noise on HF.

If BPL makes inroads as a legacy system, it will be very difficult
to remove, let alone stop.

BPL system companies will make money, the whole purpose of
that kind of thing. The rest of the HF communications world can
go away. Simple. A no-brainer.

Michael Powell will have made his small mark on history, unable
to complete his military career or emulate his father much.

Nope, no misunderstanding. I just mean that 400 QSO's is a very high
number to pick up on the GOTA station. I doubt many clubs get there.

> The GOTA station is limited to a *maximum* of 400 QSOs. You cannot

Kerect!

> So the strategy is to work exactly 400 GOTA QSOs. That's less than 17
> per hour if you go straight through. 17 per hour is more than 3

> minutes per QSO.

True, but I'd expect no GOTA stations will be in solid use. I've been supervising our club GOTA station since the concept started, and at least our typical day goes similar to a few people here, and a few there. I think only one person at our station ever went beyond 25 QSO's. And those QSO's aren't super quick. In addition, there is often an instructional period, where they learn about the exchange, and pertinent operating technique, that sort of stuff.

> The big problem with the GOTA station in a 5F group is interference.
> It's bad enough when two stations of different modes try to use the
> same band at the same time, but when the GOTA folks show up on the
> same band....

Yup. I would highly suggest a 5F group try to put up a Beverage antenna as their common receive antenna, and get it as far away as the FD rules allow 1000 foot circle that all the equipment has to be in. Don't know if that EOC center will accommodate that or not.

NO PROBLEM FOR AN EXPERIENCED OP -- FOR NEWBIES TIS A SLOW GO
WE HAD A SHEET TO TUTOR HOW TO CALL CQ AND SEARCH AND POUNCE
WE HAD A LIST OF THE ARRL SECTION ABBREVIATIONS __ THESE HELPED
WE HAD 287 QSO's LAST YEAR OVER THE 24 HOUR PERIOD
BANDS MAY BE POOR AT 10M and 15M.

> The OPEC oil embargo happened just before his "tour of duty". It was of
> major concern to all.

There were *two* OPEC oil actions/embargoes/pricehikes/whatever. The
first was in 1973 (three years before Carter was elected) and the
second in 1979 (IIRC). Both were *major* factors in pushing inflation
up and prosperity down. Neither was Carter's fault.

I think one of the reasons people dislike Carter and his time so much
was the general mood caused by the OPEC mess. Up until then, "the
future" had always been pitched to us Americans as being a
techno-wonderland of more, more, more. Faster, more powerful cars.
Supersonic airliners would replace jets the way jets had replaced
piston-engine prop planes. Our houses would be bigger, more luxurious,
and further out in the 'burbs. Yet our commutes would be fast and
relaxing in George Jetson vehicles. And we could buy it all on
inexpensive credit because interest rates would be low and our incomes
growing much faster than inflation.

The reality was just the opposite. And Carter told us we'd have to
settle for less, turn down our thermostats, wear sweaters, carpool,
take transit, etc.

Who wanted a future like that?
>
> >>>We've been told by Bush that we'll all be driving hydrogen cars - by when?

> >
> >Hydrogen *may* be a fuel of the future. But it's a long long way from being
> >practical for today's problems or those of the near future.
>
> "Practical" is usually based upon mass production.

That's just one of the factors.

A hydrogen car is, of necessity, more complex and therefore more
expensive than an equivalent petrol car. Storing enough hydrogen to
get a reasonable range is a big techno problem.

But the bigger problem is "where will all the hydrogen come from?"
Hydrogen does not occur naturally in large quantities. It can be
derived from many sources but they all require serious new
infrastructure that will cost years and billions to install. And the
result may not be any cheaper than oil.

Meanwhile, US oil imports continue to rise and the money keeps flowing
away from the USA.

> And President Bush is not the first to suggest that some scientific
> breakthrough was close at hand. Billary made an announcement that there was a
> breakthrough in AIDS research that was about to revolutionalize the care
> delivered to those victims.

One mistake doesn't justify another. And as terrible as AIDS is, we
are not dependent on foreign imports in order to deliver care to AIDS
patients.

> >Still, it sounds nice, makes for great photo ops and is a pleasant PopSci
> >diversion from the reality that the US imports way too much oil, and pays way

> >barrel.
>
> Agreed. But as long as we insist on not harvesting OUR reserves yet are
> willing to let the Arabs suck themselves dry, what are we to do.

First off, our reserves are not that large. Nor are they easy or
inexpensive to reach. Look up how much oil we'd get if we allowed
unrestricted drilling in Alaska. It's not nearly enough for us to tell
OPEC to stuff it.

What needs to be done is simply to become more efficient and wiser in
our energy use. But that's a complex set of problems that requires
discipline and longterm investment.
>
> This isn't news. This "crisis" has been in the wings for decades. People
> a lot wiser than you or I have been promising this was coming, and they were
> right.

Yet our leaders since then simply ignore it. That's one reason Reagan
was so popular - he told us it was OK to have big fast cars, consume,
and not worry about where it all came from.
>
> I se this on the same par with the "drought" in the SW United States. To

>
> The proponents of desalianation were hushed up by politicos 20 years ago
> who insisted that present infrastructure would support SW US needs well into
> the 21st Century.

Well, it's the 21st century now...

The problem is technological disconnect. Too many people just don't
think about what keeps everything running, or what it really costs.
And the political leadership keeps them insulated from it.

For example, it is much more safe, clean and efficient to travel by
modern electric railways like France's TGV than by air or car. For
distances up to several hundred miles it's actually faster. But
building such systems costs time and money, plus a commitment from
govt. that just isn't there. (Amtrak's entire capital budget would
build a few new runways at a major airport).

Or another example: There *used to be* considerable tax credits for
installing energy saving equipment in your home. Replace the old HVAC
with more efficient hardware, insulate, replace the windows, etc., and
document it, and the IRS gave you a break. That was in Carter's time.
Reagan's "get the government off your back" tax simplification dumped
it.

> >>>And
> >>>that we'll have permanent moon colonies and manned missions to Mars in the
> >>>"near future". No mention of how it will be paid for, or what real benefits
> >>>will accrue. Heck, there isn't even a commitment to save the Hubble space
> >>>telescope or replace the shuttle.
> >>
> >> Again...all of this "forecasted" in the 50's and 60's.
> >
> >And it hasn't happened because of the enormous cost and dubious benefits. But
> >now Bush talks about it like we should make it a national priority.
>
> And why shouldn't we?

Because it's simply not worth what it will cost to do it.

For example, consider the fact that it is estimated to cost $26,000
per pound to deliver freight to the moon. That's based on mass
production of next-generation rockets specifically designed to do the
job. Maybe that price can be shaved a bit, but it is fundamentally
governed by the physics of the situation.

Now figure how many *tons* of equipment and supplies need to be shipped to the moon in order to set up a permanent base. Remember that the temperature on the lunar surface varies more than 400 degrees from day to night, and that each is 2 weeks long. Also remember that the moon has no significant magnetic field or atmosphere, so there is absolutely no protection from any of the various forms of solar and cosmic radiation that constantly bombard it. Satellites in low earth orbit are afforded some protection by the earth's magnetic field, and if things get really bad humans in orbit can get back to the earth's surface in minutes. The moon is a totally different story.

How many tons of equipment would it take to establish a permanent moon colony of any size? How many pounds of supplies per year to keep it stocked?

Or look at how much even the scaled-down ISS has cost so far - and it's only in earth orbit.

More to come.

The tag team of N8NN and K8MN will participate in the Marshall County ARES group's effort from Grandview Park, overlooking Moundsville, WV. Bert and I will make up a CW team, operating one of the five or six stations. We've already done some scouting of the old driving range where the group will set up and have found a place a little removed from the rest of the stations so as to minimize interference to/from them. It also has a couple of nice trees for use in draping that 200' flattop fed with open wire line. The call will be W8CAL.

> > You hate Amateur Radio and Amateur Radio licensees. That's blatantly
> >obvious.
>
> No. Amateur radio is a fine hobby, interesting, a fine recreation
> with great technological learning capabilities.

Aside from hearsay or SWLing, how would you know, Leonard?

> Except to a few, such as nursie.

How would you know, Leonard? I think Steve enjoys amateur radio. I
know that Jim Miccolis and Brian Kelly enjoy amateur radio. I'm still
filled with enthusiasm for amateur radio. How are you enjoying all that
amateur radio has to offer?

> Nursie does NOT "represent" all or even a part of United States
> amateur radio. Nursie only represent himself.

If Steve has an amateur radio license, he certainly represents at least
a part of amateur radio in the U.S. It is a cinch that you don't
represent amateur radio. You don't hold an amateur license.

> Nursie is also
> obsessive-compulsive personality hater unable to control himself
> in here when opposed by anyone.

The name "Leonard" could easily be substituted above.

> > Some Amateur made a fool out of you at some point in time (not that THAT
> >is hard to do...) and you are determined to antagonize the rest of us as long
> >as you can.
>
> I do not "antagonize the rest of 'you'" unless the "rest" are just
> alternate personalities of nursie.
>
> I DO antagonize the conservative traditionalists, the status-quoists
> who demand everything in a hobby conform to their personal

> desires.

So anyone who holds a conservative view or who supports or respects amateur radio's traditions becomes a target for your silliness.

> I DO antagonize those who have a compulsive disorder known
> familiarly as "control freaks" who seek to dominate others by any
> means possible. Those are simply wanna-be dictators.

Thus anyone who doesn't agree with your views of how amateur radio should be regulated becomes a control freak dictator. On the other hand, we have you, a non-participant in amateur radio, who'd like to tell us who should be able to become a radio amateur and what areas should be tested. What descriptive term can you come up with for an individual with your characteristics?

> Living a life of fantasy is simply delusional. It serves no one, not
> even the fantasy believer.

I tend to agree with you, Len. So what do we do about your fantasy that you're somehow involved in amateur radio?

> Every issue under discussion has many sides. One side, the one
> nursie believes, is NOT divinely ordained to be only the True one.
> Sad for nursie, but true.

Not every issue has many sides, Len. Let's take the following as an example: Leonard H. Anderson is not a participant in amateur radio. That one seems divinely ordained as truth.

> Nursie abhors opposition, wants to dominate, wants to win at all
> costs, wants to FIGHT.

If we sub "Leonard" for "Nursie", we'd have a fairly accurate view of your puerile behavior.

> United States amateur radio is not a military organization whose
> purpose is to fight for the country.

It matters not, Len. Whatever amateur radio is or is not, you have nothing to do with it.

> ...by entering this newsgroup, EVERYONE enters an arena of
> outraged PCTAs busy trying to preserve the honor and glory of
> a soon-to-be DEFUNCT communications mode. It is a FIGHT
> arena inhabited by punch-drunk olde-fahrts thinking they are
> all Rocky running up the museum steps to stirring music. :-)

And there we have it, your view of the situation. As the oldest fart present and, to my knowledge, the only non-radio amateur, you'd best go into training. You might want to start with some Mantovani and work your way up to the stirring music.

> Nursie want to be center of attention. Ego drive. Uses all
> palaver in here to divert from real debate he cannot handle, will

> not handle if it is against his own precious opinions.

Seems to me that the above is quite descriptive of your actions, Len.

> Amateur radio is not golf.

> Amateur radio doesn't have the balls for it. :-)

Apparently, neither do you.

> > The difference here, Lennie, is that I have experience in Amateur Radio.
>
> ...and a very large fantasy in addition to pretty certificates (suitable
> for framing).
>
> FCC not require staff or commissioners to be radio amateurs in
> order to regulate amateur radio in USA.

As has been pointed out to you on numerous occasions, FCC staffers and commissioners are paid to regulate amateur radio. You don't regulate amateur radio. You aren't an FCC staffer or commissioner. You aren't a participant in amateur radio.

Welp, unlike the others who claim to have me blocked yet know every word I've ever posted...

I've actually not read every Steve posting out there. So I actually missed his references to reaching out and touching someone. Spooky dude that Steve.

> Nursie wanna posture and threaten wid sojer skills, like shooting.
> "A few ounces of pressure" refers to the trigger squeeze force.
> Tuff macho tawk.

I've never not shot expert in sojer skills. Even when I fired the Army course in Korea. 'Course, there's a rule against having the AF Marksman award and also claiming an Army Marksman award. You wear whichever you earned first. Unlike my ARCOM and my AFCOM with clusters. I get to wear them both, with the AFCOM taking precedence, of course.

> Poor nursie don' know I qualified expert on the range against

> the NRA be in this neck of the woods]

I was our commander's gunner on his trip from the former U.S. Embassy
to the
M-O-G-A-D-I-S-H-U airfield when George H. Bush flew in. Luckily the
trip was early AM or it would have been a paperless environment.

> He will tell you to "call the VA!" :-)

If it would help, but I'm not the one filing for a benefit. He'll
just have to have the right credentials, or its "no show."

What's he always saying? "Sucks to be you?" Til he's got those
credentials...

> >> Now, gunnery nurse, tell us the WHEN and WHERE of all those

Whoo boy! Talk about perverse. Kelly has requested that I "bend
over" for him. While I don't want to judge what two consenting adults
want to do in private, I'm just not interested in taking that path.

And now Steve wants to beat me up...

There's a couple of Extra's we could use a break from.

I enjoy Four O'Clocks in the garden. It has nothing to do with
amateur radio policy. Sounds ripe for discussion.

;^)

Nice. The Fort WhaChewKah PA Office had to spell it out for those
that are smitten by the myth. I can only imagine all of the telephone
calls and letters from all of the morseodists that couldn't believe
that morse code was not at the crux of modern communications for them
to have to put such a notice in their publications.

> 1) Why do we have the highest rate of incarceration in the world?

Good question - I hope you have the answer.

Maybe because we don't hold youngsters accountable, at an age when
they might actually learn a life-long lesson. Then when they become
adults, their behavior is just not cute anymore. We incarcerate them
at that point.

Prison jobs are about the only growth industry in Ohio, even with the
Gov trying to close prisons.

> 2) What does Morse code have to do with it (other than, of course, causing
> my washing machine to over-suds?)

I thought we were talking about what was good for America -and- the
blind followers of the faith. It was a natural turning point to
discuss the Morse Code Exam.

So, is the Morse Code Exam good for America?

> Best regards from Rochester, NY - and don't strain the brain
>
> Jim AA2QA

No sweatty-dah.

That's "no sweat" in Korean.

(;^) thought I'd give the peanut gallery some intellect to laugh at.)

Sure. Point is, though, that by setting the number at 400, we don't have the
problem of having to shut the GOTA station down because the quota has been
reached.

Why a Beverage? It receives well in one direction only, but in most of the USA
you need more than one direction.

Oops, sorry about that. That's what I get when I get interrupted and
don't do a spell check,

I was just going to say that I would caution people about how a person
that I consider a patriot - Max Cleland - was attacked as unpatriotic
in a recent election.

Max lost 2 legs and an arm in the service of our country. Problem was,
he didn't have the "correct" politics. If you don't like the man's
political leanings, fine. Challenge his voting record.

But not his patriotism. That makes me want to puke.

All those that serve our country honorably are patriots in my book. Too
bad there is a new breed that ties patriotism to "goodthink" in addition
to the willingness to lay down your life for your country.

Seems political correctness has been reincarnated!

>>story that your "group" sends down the wire, you will be hoodwinked.

Of course not. I never said they were, nor will I ever. But most I know
now admit to no shortcoming *ever*.

>
>
> Sure. Point is, though, that by setting the number at 400, we don't have the
> problem of having to shut the GOTA station down because the quota has been
> reached.

Well true, but in that vein of thought, we might as well not have a
limit at all.

FWIW, I don't mind limits on the GOTA station, mainly because I'm the
control op for our club. I sit with the newbies and hams getting back
into the fold all day, and then after the station closes down, I can
kick in the afterburners on the night shift. I've made good friends
working the overnight. (yeah, us crazies gotta stick together!)

>>>The big problem with the GOTA station in a 5F group is interference.
>>>It's bad enough when two stations of different modes try to use the
>>>same band at the same time, but when the GOTA folks show up on the
>>>same band....
>>
>> Yup. I would highly suggest a 5F group try to put up a Beverage antenna
>>as their common receive antenna, and get it as far away as the FD rules
>>allow 1000 foot circle that all the equipment has to be in. Don't know
>>if that EOC center will accommodate that or not.
>>

>
> Why a Beverage? It receives well in one direction only, but in most of the USA
> you need more than one direction.

When you use a multiple wavelength Beverage the directivity isn't quite
as bad. (or good - depending on what you are trying to achieve) I don't
recall the length of ours, but it was at least 2 wavelengths on 80 meters.

In any event, it quieted the interference between the rigs, and I don't
recall any significant losses to the east of us, since we still heard
the stations in that direction.

>>> LHA / WMD
>>
>>
>>I enjoy Four O'Clocks in the garden. It has nothing to do with
>>amateur radio policy. Sounds ripe for discussion.

Not much going on for amateur radio discussions in an amateur
radio policy forum...except FD. Might as well talk about something
other than Presidential Politics and how evil, wicked, mean, and
nasty the opposition candidate is. :-)

The Comment period on docket 04-37 (NPRM for Access BPL)
is over. [some will probably continue sending in Comments for
another two years...heh heh] A VERY important subject for
anyone using HF...those who still can, that is, before BPL comes
to their neighborhood. Nobody wants to discuss that. "Too
complicated" a couple of others in here thought.

Those would rather blabber about presidential politics and very
important events of the past...nothing of which pertains to ham
radio or even ham meat.

There's the matter of 18 (!) Petitions on some major makeovers
of Part 97 that are waiting for FCC come-back. The PCTA must
not dare talk about code testing anymore.

I think the comment period on docket 04-140 (minor restructuring
of Part 97) is over. Not much response there, sort of tepid at the
ECFS and nobody serving tea.

Some clowns in here want to rewrite history of 1955 on phonetic
alphabets. Crazy. Been done by NATO 49 years ago. Can't
call it that, though, has to be the ICAO phonetic alphabet.
Prolly cuz too many of those PCTA regulars didn't serve...but
they do like to fly around squawking when any NCTA happens by.

I have to laugh at their intellect in here. :-)

One of them might be an Air Medal.

Lots of that "air" around here from all that claiming...

"Claim chowder." Most of it fishy.

There's the Battle of Bunker Hill medal, a forgery. It says only
"Battle of Bunk" on it. He must wear that most of the time.

Altogether now to sing the Marines Him.

There appears to have been another mishap in the Anderson home communications center.

It isn't schtick and it is no ploy, Leonard.

If some kid, assuming that he is above the age which you believe should
be the minimum for amateur radio licensing, comes to you and says, "What
can you tell me about amateur radio, Mr. Anderson?", the best you'll be
able to do is tell him that you heard from a friend that amateur radio
is....
or that you read in a book that amateur radio is...

You're shucking and jiving, Leonard.

Oh?

Do you know where much of the "unapproved" but wide used and effeective
drugs for AIDS treatment come from,. Jim?

There's a major influx of theraputics from "illegal" sources" that are
getting to folks...Not that it's a bad thing since most of them are
working...That's why there's been a big move on FDA to loosen it's standards on
AIDS treatments.

Afterall...what can they do? Kill them?

>> >Still, it sounds nice, makes for great photo ops and is a pleasant PopSci

>OPEC to stuff it.

Jim, there are a LOT of things that are not that easy to get to, nor are they that "Inexpensive" to harvest...UNLESS we just bite the bone and spend the money on the new infrastructure.

Imagine where we'd be in space travel if we'd continued our push out in the 70's and 80's, instead of still debating it in the 21st Century...

Imagine where we might be as far as our own oil reserves might be if we weren't so preoccupied with what it would "cost"...?!?!

>What needs to be done is simply to become more efficient and wiser in
>our energy use. But that's a complex set of problems that requires

I agree.

I am the first one to support greater mass transit and re-invigorating our railroads in support of this...I'd gladly spend my morning commute to work reading the paper and sipping coffee rather than dodging Granny and worrying about how wet the roads are.

Now if we can get the other 299,999,999 Americans to do the same. But do you think the lobbyists in Detroit, Tokyo and Bonn will go along...?!?!

>> This isn't news. This "crisis" has been in the wings for decades.

You're assuming that all we are going to do is go up there and look back
at Eart and play moongolf.

>Now figure how many *tons* of equipment and supplies need to be
>shipped to the moon in order to set up a permanent base.

And it get's MORE expensive to send that stuff up every day.

>Remember that
>the temperature on the lunar surface varies more than 400 degrees from
>day to night, and that each is 2 weeks long. Also remember that the
>moon has no significant magnetic field or atmosphere, so there is
>absolutely no protection from any of the various forms of solar and
>cosmic radiation that constantly bombard it. Satellites in low earth
>orbit are afforded some protection by the earth's magnetic field, and
>if things get really bad humans in orbit can get back to the earth's
>surface in minutes. The moon is a totally different story.

We already have the technology to build adequate shelter for them.

And as crass as it may sound, more Americans are killed in automobile accidents every MONTH than have been killed in the space program since it's INCEPTION.

In the tri-county area of Southern Tennessee where I live alone, we've had enough fatal MVA's since June 1st to staff ISS for the next couple of years.

>How many tons of equipment would it take to establish a permanent moon
>colony of any size? How many pounds of supplies per year to keep it
>stocked?

So we sit around and say "what if" until the sun goes nova?

As for what it "costs", Jim, what about it's rewards? The advancement of computing technology alone, spurred on by technological developments in the space program, have moved you and I, the little guys" ahead quantum leaps.

>Or look at how much even the scaled-down ISS has cost so far - and
>it's only in earth orbit.

And think of what it could accomplish if we'd quit trying to do band-aid financing of the programs...?!?! Medical research alone could pay for the thing in less than a decade.

But I guess we'll just sit around and pout about how much it costs "today"...

>
> "Legalities?!?" :-) For an unlicensed radio service?!?

Don't show more ignorance than what you have already shown us, Lennie.

FRS is regulated under Part 95 of the >>FCC'S<< Rules and Regulations.

CAP, as a defacto federal agency (as attested to by the Department of
Defense, Department of the Air Force and the Attorney General of the United
States...) is obligated to operate under NTIA.

The criteria for federal agencies operating on FCC regualted radio
services is very narrow. "Routine" communications and communications
conducting the business of the organization are NOT "authorized" uses.
Opertional missions are not "legitimate" uses either, except where
inoperability or coordination with other rescue agencies is critical, are not
authorized either.

These "restrictions" are not solely applicable to CAP. They apply to all
other federal entities also.

> Maybe nursie suggest using MARS.

Actually Civil Air Patrol has quite a few stations authorized to operate
in Air Force MARS, Lennie.

> No, can't do that, nursie say "MARS >>IS<< amateur radio!"
>
> :-)
>
> Nursie made an "ace" of himself again.

No...you did, Lennie. By your lack of practical experience and
operational knowledge.

Putz..

> Except to a few, such as nursie.

I have enjoyed Amateur Radio since 1972, Lennie.

It has been a great tool, a source of recreation, and a social gathering
place.

And as of today, youa re still not a part of it, save for being a
sidelined scufflaw.

> Nursie does NOT "represent" all or even a part of United States
> amateur radio.

Sure I do...At least 1/675,000 part of it.

Which is 1/675,000 more than you are.

I dare say that judging by many of the other responses in this forum, than
some of my opinions are also held by others.

Google refers.

> I DO antagonize those who have a compulsive disorder known
> familiarly as "control freaks" who seek to dominate others by any
> means possible. Those are simply wanna-be dictators.

There is only one "control freak" here, Lennie.

You see him in the mirror every morning.

>> Here's MY "purpose"...It's a proven fact that those who bark the
>loudest
>>or longest are usually the one's who get the most attention.

>
> Nursie just wanna FIGHT. Nursie FIGHT anyone who have opposite
> opinions of nursie's.
>
> Bark, bark, bark, little nursie.

Seems I'm the little doggie that got ahold of YOU, Lennie!

Sucks to be you.

> There is nothing at all "discrediting" about showing FANTASIES
> to be fantasies of the imagination.

The only fantasy in this forum, Lennie, is that you are a person of
respectable character, or that you are making some sort of "constructive"
participation in it.

> Education in the radio arts is not accomplished by pretending that
> amateur radio is some paramilitary service organization or that
> memorizing the advertisements and radio reviews in QST is
> "learning" what happens behind the front panels...or that amateur
> radio "always comes to the rescue during emergencies when all
> the other radio infrastructure 'fails.'"

You are the one with such fantasies, Lennie.

You are the one who makes denigrating comments about parallels between the
Armed Forces and Amateur Radio. And no one here has said "...amateur radio
'always comes to the rescue' ..."'

The FACTS are that Amateur Radio DOES "come to the rescue" in a great many
instances, and it CONTINUES to do so in the 21st Century, cellular and Internet
technology notwithsatnding.

>> As long as you deem it your "purpose" to do so, I will do MY best to
>>expose you for the antagonist and mistruthful putz that you are.
>
> Tsk, tsk, tsk. Nursie back into name-calling mode, trying to "win"
> newsgrope arguments by some kind of "show of force."

It's no "show of force".

It's the truth.

> Amateur radio regulations were established by people, not gods
> or chiefs of stuff of some paramilitary organization. Regulations,
> standards and procedures all evolved, changed with time. That
> will continue to change as time goes on. There is NO divine
> purpose to stop change.

Yes, those regulations were established by "people"...

People who have a vested, practical experience in the radio service they
are a PART of...

It was true in 1912...it's true in 2004...

Except for you.

Go figure.

> Change is opposed by those who managed to meet OLD
> standards and procedures of long ago. They cannot, will not
> adjust. They fear change. Change manifests insecurity for
> them. Or, they are so ego-driven that they fantasize their
> individual accomplishments as so mighty and noble that they
> think of themselves as role-models for all.

A rant of monumental proportion, put to rest by any one who cares to
review any of the posts made by any of those persons you refer to as "PCTA's",
myself included.

>> You were offered SEVERAL apologies and offers to move on, but your
>answers
>>were clearly designed to simply perpetuate an argument.
>
> No. Not on record.

Yes, on record.

In Google and Deja before it...

> Nursie has not admitted that either of his
> statements about MARS being amateur radio are wrong, nor has
> he/she ever admitted to reading any of the military documents
> defining and explaining MARS...nor has nursie identified any
> part of Title 47 C.F.R. defining MARS as a civilian radio service.

I have read many of those records, Lennie.

None of them dispute my assertion of No Amateur Radio = No MARS.

Recent posts by others here validate the activites of those
MARS-authorized Amateurs in federal communications exercises.

> Nursie has never revealed the when and where of any claimed
> military "hostile action" yet demands full and complete disclosure
> of all others...for any claim. Nursie be a hypocrite.

So far, my unweillingness to disclose whena nd where I was involved in
hostile contact is your ONLY argument, Lennie.

So far, that means you are about 30-1 behind on unansweed questions.

> Nursie continually insults others' private and professional lives
> clearly designed to induce word FIGHTING and then tries to
> say "others did it first!" Nursie be an insulter and hypocrite.

It's not an insult if it's true.

> Nursie want to be center of attention. Ego drive. Uses all
> palaver in here to divert from real debate he cannot handle, will

> not handle if it is against his own precious opinions.
>
>> You have nothing to offer.
>
> Nursie make imperious demand.

It was not a demand. It was an observation. So far, one you've not been
able to disprove.

> Just the same, I was on the staff of Ham Radio magazine after
> being an author-contributor.

Yes...you were...

A magazine that is now defunct due to a lack of readership and
circulation.

So much for your editorial and leadership skills, Lennie.

> At the mention of that, nursie will go immediately into ATTACK
> mode, all safeties off, insulting all the staff of HR for being a
> "defunct" publication...even after 22 years of existance as a
> self-sustaining independent periodical for radio amateurs.

I am not "attacking" the staff at HR, Lennie.

Just you.

I am sure Jim Fisk and the other folks were

> Nursie will then change gears and say I cribbed all information
> ("cut and paste" in his words) and had "none of my own."
> Nursie not understand any of the articles, too much intellect
> for him, therefore author become "enemy of state" to be
> destroyed (by any means possible). Poor nursie.

Poor Lennie.

There's no facts to substantiate any of your CLAIMS about them, either.

> Nursie think amateur radio all about manual telegraphy or code
> testing? Not so. Elimination of code test is my main concern.
> That is happening. Very slowly but it is happening. First break
> in mighty Amateur damn was in 1990.

Yep. And it happened WITHOUT Lennie. Sunnuvagun!

> Small trickle of no-coders
> entered ham radio in 1991, are now the largest class group in
> U.S. amateur radio.

"Small"...?!?!

>> I already acknowledged the enabling directives of MARS.
>
> And how was that done? Must have been by private courier or

> other means "obscuring the information."

No blinder are those who will NOT see.....

> If amateur radio goes away, MARS can remain. All that is
> required of DoD is then to update Directive 4650.2.

Sure it can.

Just like there are Jim Crow laws on the books in many southern states.

And until the Department of Defense decides that MARS needs to be staffed
to a level that would make it operationally viable WITHOUT all those Amateur
Radio volunteers, my assertion that NO Amateur Radio = No MARS is accurate.

> No. If anything nasty be said about me, it is because I keep on
> opposing fantasies blabbered by nursie.

Anything that is said about you is in response to what YOU have said.

Afterall, this exchange wouldn't be possible without you, Lennie. You ARE
your own worse enemy.

>> MARS, without the thousands of volunteer Amateurs who man it, would not
>be
>>able to carry out those duties those directives require. Period.
>
> MARS has done well WITHOUT those volunteers in exercise
> Grecian Firebolt 2002. They are still doing so in 2004.
>
> Sunnuvagun! How about that?

Sunnuvagun...how about all the resports of MARS stations participating
being MOSTLY from "individual" stations...?!?!

You need to participate in forums other than this one, Lennie.

>>Only a major
>>manpower restructuring in the Armed Forces would allow it, and under present
>>circumstances, that is highly unlikely.
>
> Okay, Chief of Stuff, explain THAT gem?
>
> The U.S. military has a very large communications organization
> that is done by military personnel. Doesn't involve MARS at all.
> Does all the tactical and strategic communications for the military.
> Very big. Army Signal Center is at Fort Gordon, GA.

Nice try for a change of tangent, Lennie.

We are not discussing operational military traffic, Lennie.

We are discussing MARS. Not ADA, AIR, WAR, SINCGARS, or equipment
nomenclature...Just the MARS program.

I'd suggest you try and stay focused, but you can't and keep an "edge" in the arguments.

> MARS can go away today and not impact any missions of the
> U.S. military.

Yep....I never said anything else.

>> And I don't need to "intellectualize" anything.
>
> You don't seem to be able to do that. All the readers see is you
> personally insulting others who differ with your godlike opinions.

"Godlike"...?!?!

You are not an Amateur Radio licensee. You never have been.

You've made countless assertions and "observations" to and about Amateur Radio, most of which have been easily rebuked by fact, and certainly NOT substantiated by any fact from you.

(Shall we once again revisit YOUR assertions of "dishonesty" by ARRL officials...?!?!)

> Everyone with opposite opinions LIES!

Nope.

> Nursie = nuts.

Still waiting on you to provide those documents that will demonstrate your qualifications in mental health education or training, Lennie.

Until then...You're still a putz.

>the stations in that direction.

Thye physical separation alone may have been the trick.

Seems to me the optimum setup for a multi is to put the stations on the rim of a circle and the generator in the center. Adjacent stations are on widely different bands and modes. Antennas are just inside the 1000 foot line.

Never used a regenerative receiver, have you, Len? That's obvious from your
statement. A good one is as sensitive as a modern superhet on HF.
>
> If BPL makes inroads as a legacy system, it will be very difficult
> to remove, let alone stop.

The Iowa case will set a precedent.
>
> BPL system companies will make money, the whole purpose of
> that kind of thing.

Maybe. Or maybe not - many technologies that were highly touted never made a dime and faded away. How many billions were lost on the Iridium system?

> The rest of the HF communications world can
> go away. Simple. A no-brainer.

President Bush and Commissioner Powell say it's not a problem. NTIA says BPL can reduce line noise. A lot of "professionals" say we amateurs don't know what we're talking about. Folks like ARRL have produced voluminuous documentation and measurements of what BPL interference is like, yet that has not been convincing to FCC.

How does anyone argue against that?
>
> Michael Powell will have made his small mark on history, unable
> to complete his military career or emulate his father much.

You mean his father who presented evidence before the UN that turned out not to be very accurate? He didn't want to, but his boss insisted. Same thing is going on with BPL. Shrub wants *anything* that looks good in the techno-world. And he's goit highly paid *professionals* telling him BPL and HF radio can coexist peacefully.

So what else can be done? Thousands of hams and others saying "BPL is bad" hasn't stopped it. FCC doesn't have to go with the majority, or even interpret its own rules the same way all the time.

devil's advocate mode = ON

Besides, Len, who really uses HF radio much anymore? The important military stuff all goes by satellite, right? You don't see the Pentagon making trouble about BPL. Ships use GMDRSS and EPIRB and satellites and such. SWBC is being replaced by satellites and netcasting. All that's really left on HF are hams, cbs, freebanders and some backup systems. HF is unreliable at best and useless at worst. It's slow, error prone and inadequate for things like streaming video and broadband connectivity. The few services still using it are "living in the past", aren't they?

Besides, why are *you* upset, Len? You're not a ham.

Interesting. I once said that a prospective ham almost had to know a
ham to become a ham. Then you guys set upon me like the pack of wild
dogs that you are, telling me of acts of heroism how you got the book

and read it and went down to the steely-eyed fcc examiner and became a ham. No sir! No help from no one.

So Len could tell the kid to get a book. Which according to your comment above, a book just isn't going to give sufficient information to be able to answer questions about amateur radio.

You guys play both ends against the middle, and now that you've worked down to the middle, your arguments fail because they are contradictory. Go argue with yourself. You, K8MN, are shucking and jiving.

Best of Luck.

Had it by 1969, to be exact. The Soviets sent unmanned probes there
about a decade earlier.
>
> History has shown us that most major "jumps" in technology and society
> happen in the wake of war.

Some jumps, yes, but I don't know about "most". In many cases those
"jumps" would have happened anyway, or are the result of massive
investment by governments that would be considered "socialistic" in
peacetime. Or they're the result of government programs that are done
to soften the conversion to a peacetime economy.

In any event the cost far exceeds the benefits.
>
> RECENT history has shown that we made some pretty significant strides
> based on the Apollo program alone.

Such as? Tang and Teflon existed before NASA.

No one has been back to the moon in 32 years and there are no serious
plans to do so anytime soon. The technology to do it would almost have
to be reinvented.
>
> For those who insist that "we need to spend the money here", I ask WHERE
> in space are you going to spend that money?

We need to spend the money in ways that will directly benefit people
here. And address problems long-term.

>
> A bit of government subsidising would promote yet another wave of
> technical advencement.

Agreed - spent in the right places. That's the principle that drives those "Tax and Spend Democrats!!!"

Trips to the Moon and Mars will require a lot more than "a bit of government spending".

It was in the Nixon/Ford years that the big NASA cutbacks took place. Too much money, they said. There was supposed to be an Apollo 18 lunar mission - it was cut and the Saturn V for it became a museum piece. Literally.

All of NASA's manned budget went into the shuttle, which is a marvelous system with a 1 in 75 chance of complete mission failure. The number of shuttles lost compared to the number of missions flown verifies the reliability analysis.

The reason the USA made the big space commitments was because JFK and LBJ (guess what party) pushed for them. They were essentially done to compete with the Soviets for the "high ground" of space. Recall that practically all of the important early space firsts (first earth satellite, first animal in space, first human in space and in orbit, first woman in space, first mission to another heavenly body, first pictures of the far side of the Moon...) were done by the Soviet Union. And most of their early accomplishments were complete surprises in the West. The USA played catch-up for years. JFK and LBJ knew that if the Rooskies could orbit a man and bring him back safely, doing the same with a nuclear weapon would be a piece of cake for them.

Today there is no such need or competition.

The cost was staggering but they had the political clout to do it. They could sell it to everyone on the national security agenda. And it didn't hurt that a lot of the money was spent in states like LBJ's own Texas. (Why is the control center for manned flights in Houston when the launch facility is in Florida?)

Billions were spent on the space program in the '60s but when Americans needed quality fuel-efficient cars in the '70s they had to go to Germany and Japan for them.

> I think the recent events in the Mojave also show that
> a bit of entrepenurial spirit and investment can go a long way.

As exciting as that effort is, all of it was done more than 35 years ago with the X-15.

And it was done without government funding. So why do we need NASA for manned flights at all? Let the private folks do it on a self-funded basis.

> So why not Mars?

Because the cost and risk is simply too much for the benefits. Do you have any idea what a mission to Mars would require in terms of how big and complex the ship(s) would have to be, how long they'd be gone, and how completely on their own they would be?

Mars is orders of magnitude more difficult than the moon. Apollo missions were no more than two weeks, Mars missions would be over a year long. The Martian surface is in some ways more hostile than the lunar surface and the landing physics much more difficult (Martian gravity is stronger). Look how many unmanned Mars missions have failed completely.

Heck, figure out radio propagation delay to Mars....

What benefits would a manned mission to Mars give that could not be had any other way?

And how much all of it would cost?

> Why not research stations on the Moon?

How much are *you* willing to pay for them in tax dollars? That's really the bottom line. People are all for space exploration and such until the bills for it show up.

> Unless you want
> to ressurect the "world is flat" or the "we never went to the Moon"
> conspiracies, what other legit reasons can you think of to NOT do it?

Simple: The costs outweigh the benefits. There are easier, cheaper, faster ways to get the benefits and solve the problems we have on earth.

Space and war may help with some things but they are horribly inefficient means of progress.

None of this means we shouldn't go into space, just that we need to do so in a way that is balanced with other needs and programs.

>Best of Luck.

The POINT, Your Junior Putziness, is that Lennie doesn't HAVE the
experience to help the kid OTHER than the theory part.

He can't help with testing, other than to refer him to someone else.

He can't help with the Code (should "the kid" desire to learn it), other
than to refer him to someone else.

He can't help with tutoring "the kid" on proper Amateur Radio operating
technique, other than to refer him to someone else.

He can't help with...well....I can go on and on....

It's NOT about working "both ends against the middle".

It's about what contributions Lennie has alledgedly made to Amateur Radio.

Easily summated, it's ZERO. His only "professional" affiliation with
Amateur Radio went belly-up a long time ago. Furthermore there's not a single
reference, footnote or other attribution of an LHA-authored HR article in ANY
technical text outside of that defunct magazine, and even then, that's 20+ year
old information.

As you can see, no luck was needed...just facts.

Which "you guys" would that be?

> ...telling me of acts of heroism...

Acts of heroism? I don't believe you.

> how you got the book
> and read it and went down to the steely-eyed fcc examiner and became a
> ham. No sir! No help from no one.

Novice exams weren't taken in front of any FCC examiner, much less a stelly-eyed examiner. K8CFT wasn't steely-eyed at all. SK W8MN sparked my interest in becoming a ham but he couldn't learn the theory for me and I'd moved to a different town by the time I began practicing morse to increase my speed.

> So Len could tell the kid to get a book.

Oh, he wouldn't likely do that. He'd go into one of his Foghorn Lenhorn pontifications.

> Which according to your
> comment above, a book just isn't going to give sufficient information
> to be able to answer questions about amateur radio.

A book can provide information to an extent. No good golfer became one by reading a book. No good fisherman became one by reading a book. No good radio op became one by reading a book. Practice and experience are the keys. Len has neither.

> You guys play both ends against the middle, and now that you've worked

I'd say that they appear contradictory to you, "William", because you don't fully understand them.

Why does it always have to be about you, Len? Radio amateurs are free
to seek out information about the "larger world of radio" in any number
of venues. Many radio amateurs have been or are participants in the
"larger world of radio". If you'd like to impress us, obtain an amateur
radio license of any class and regale us with those tales.

Good guess, but not quite. We were moving away from the Gold Standard at that time. It was the date that President Richard Nixon instituted Wage and Price controls. At that time, inflation was at the 4% level - something considered intolerable.

We soon found out just how "nice" a measly 4% inflation rate was. The initial 90 day freeze turned into around 1000 days of "adjustments" that soon saw the inflation rate at 13 percent in December of 1974. The rate dropped after that, but what was handed to President Carter was an economic train wreck, to put it mildly. This all culminated in an inflation rate of 15 percent in March of 1980.

The Wage and price freeze was what turned me into an fiscal conservative!

Now, was that a "leeberal" mistake?

Shoot.... the power line noise around here is horrendous !!! AM broadcast radio is spotty at best when driving around and that includes stations that are actually close (25 miles or less) and the intereference makes listening to talk radio almost impossible unless you find that "magic spot" to park and listen. What really burns my bum is that one of the stations I DO like is WJR!!!!!!!!!!!!!!!

I can only imagine what might happen if BPL happens here.....

Source record: 93349

Will be running KC8PMX on 50Mhz-450Mhz bands. Decided to run on my own as a matter of passive resistance to the local club's field day planner. Field day is supposed to be an emergency preparedness scenario, and there is nothing close to that from what I see of the plans locally here.

Not sure which classification I will be running yet, but will be using 3 transmitters, on battery power, occasionally charged by a vehicle's electrical system, but the batteries won't be located in the vehicle. And I will be operating from our fire department's parking lot of which I am a member of.

Now, would I be a B, C, or F station, and also, does the number mean persons or transmitters?? I am thinking if it means number of transmitters, I might be a 3B, 3C, or 3F possibly..... If it means persons, then I might be a 1B, 1C, or 1F station..... Any suggestions? A little confused with the field day rules.

No, I want to know.

The president can't fudge the Dow, can he? He can't fudge unemployment
numbers.

He may be able to exert some influence on the Fed on interest rates.

> >> Jim, Billy wasn't in office 90 days when he tried to claim that (then)

>
> Taking credit for something you didn't so is exactly that, Jim. He lied.

That's NOT "using smoke and mirrors to make things look better than
they are". It's "the rooster taking credit for the dawn".

Two very different things.
>
> >>Never mind that the NYSE had been on a steady upward trend for the

How is that artificial? If there's a budget surplus, tax rates can be
lowered *and* the debt reduced, thereby helping the economy.

Was the budget surplus real or faked?

> our good sold.

It's a matter of thinking long-term rather than short-term. Education
rather than legislation. Gradual changes on a broad front rather than
narrowly focused quick fixes that ultimately don't work.

For example, suppose there were tax incentives to use transit? As in
getting a tax credit for money spent on transpasses or organized
carpools?

Ultimately it comes down to asking people what they *really* want,
what they're willing to pay, and what they're willing to do without.
That's not an easy task, and the last president to try it was Jimmy
Carter. That's a big reason folks dislike him so much.

Ronald Reagan pushed the idea that we could have it all and not do
without anything. But it's just not true.

> No...they get rich getting other people to take in other people's
> washing...By providing a business infrastructure to do that in.

In the short term. That's the problem.

> Paid?

Yes. The debt eventually has to be paid - or at least the interest on
it.

> I was ripped off by the taxes I got zapped with on what should have
> been a very, very lucrative income.

How were you ripped off? When?

What I have seen happening is that the tax laws are set up so that
changes happen years after the enacting legislation so that you don't
feel the pain until down the road a bit. And rather than simply
raising tax rates, they tinker with the details so that you pay more
tax around the edges.

For example, the minimums for deductions go up a little bit. And then
a little more. And certain things are cut out.
>
> >And remember that it was Papa Bush who said "Read my lips...no new taxes" but

But the budget wasn't balanced until.....

> Also, much of the improvement in the economy at the end of Bush Sr's tour
> was the result of technology advances made in 80's.

Which also put a lot of people out of work.

The *biggest* factor was that oil prices stabilized and interest rates
dropped.
>

> As a matter of fact I do.

Why do you think they're so high?

Heck, here in PA some docs and other medical folks are simply shutting
down or packing up and leaving because medical malpractice insurance
is simply too expensive. Sure there are some bad docs out there, but a
lot of it is fueled by a lawsuit system that has nothing to do with
medical reality.

Where are those comments? When were they given?

The reason I ask is that the picture which was supposed to prove
something turned out to prove something quite different when all the
facts are presented. The same may be true of the alleged comments.

> >Yet Kerry gets blamed and condemned because he was three rows behind and a

Did you bother to read that stuff?
> >
> >>How Kerry, a combat vet, his opinions on the war itself notwithstanding,
> >>could sit next to a person who
> >>openly gave comfort to the people who were trying to proactively kill him is
> >>beyond me.
> >
> >Simple:
> >
> >1) He did not sit next to her
> >2) She did not go to Hanoi until *TWO YEARS* after the picture was taken.
> >

> >See how just two little facts - dates - make all the difference?
> >>
> >> Those who protested the war had valid arguments.
> >
> >Agreed.
> >>
> >> Bill Clinton even had a valid RIGHT to PROTEST the war, even in Oxford,
> >>England. Billary's error was at first saying he never did it then trying to
> >>claim the pictures weren't him.
> >
> >He lied.
>
> Indeed...Over and over and over....

Just like Nixon...

> I believe the Oxford situation was the first item to hit the wires.
>
> If he'd only had the intestinal fortitude to say "Yes, it was me...It was a
> legal protest and I broke no laws", then every other "story" that came along
> would have been dismissed...or at least given a more lenient "benefit of the
> doubt".

Of course.

And if he'd said of the whole ML mess: "Sure, I did it. So what? Many
of you have done similar things."

> Overall, Clinton was an adequate president.

In many areas, yes. In others, no.

> Unfortunately he couldn't seperate his duties from his ego, and he will be
> remembered as one of the most prolific liars in the office...He made a mockery
> of it.

Sure. And what burns the most is that *he got away with it*! He was
impeached but not convicted. He was caught in lie after lie but never
lost his job, marriage or freedom because of them. I couldn't get away
with that and I doubt you could either.

And now he comes out with a book that documents all of it, and he'll
make a bundle because millions of folks will pony up $$ to read about
it.

> >> If the gutless liar had simply stated "Yes, I was against the war and I
> >>exercised my right to protest it in a legal demonstration", even the most
> >>right-winged Hawk would ahve had to give him due for being honest about it.
> >
> >He lied.
>
> He sure did.

>
> >> Kerry earned the additional right to speak out...practical experience.
> >
> >No, he didn't.
>
> Yes, he did.

Someone cannot earn more of something that everyone already has.
>
> >Everyone has the right to speak out. Kerry earned *credibility* because he
> >spoke from actual experience.
> >
> >>But to sit down next to a low life slut who intentionally betrayed her
> >>Countrymen was foolish. I would have shot her first.
> >
> >How would you have known what she would do two years in the future?
>
> Point taken for the third time, Jim.

I only repeated it because you kept repeating the false conclusion.
>
> >>It's a testimony to
> >>America's professional, all-volunteer force that she hasn't been shot.
> >
> >It's no testimony to the justice system that she hasn't been brought up on
> >charges.
> >>
> >>>When is it OK to be against a war one's country is fighting? If there's
> >>>armed
> >>>conflict going on, should we still have elections? Or should the president
> >>>simply serve until the conflict is over? After all, *anyone* who opposes
> the
> >>>incumbent is, in some way or other, saying that the current leader's
> >>>policies and decisions aren't right.
> >
> >Well?
>
> Well indeed.
>
> What precedent are you trying to set? Why are you trying to set it?

What I'm saying is this:

It has been said by some that things like demonstrations and protests
during armed conflicts are disloyal. That they "give aid and comfort
to the enemy" and do not "support our troops".

This line of argument is sometimes extended to any talk against the
war in Iraq or Afghanistan. It comes down to "if you don't support
what the President says we must do militarily, you're not a loyal
American".

So what I did was simply extend the line of reasoning a little
further.
>
> We still had elections during the Civil War, World War 2, Korea and Viet
> Nam. How did you extrapolate some idea about when it's OK to run for president
> against my hatred for Jane Fonda?

See above.

73 de Jim, N2EY

5288. Amateur Radio Newsline™ Report 1401 June 18, 2004

Newsgroup: rec.radio.amateur.policy
Date: 2004-06-24 17:10:19 UTC
From: radionews@aol.com
Message-ID: <20040624131019.23018.00000523@mb-m07.aol.com>

Amateur Radio Newsline™ Report 1401 June 18, 2004

Now, Amateur Radio Newsline report number 1401 with a release date of Friday, June 18 2004 to follow in 5-4-3-2-1.

The following is a Q-S-T. A new ham-sat is made ready for launch and the B-P-L struggle continues. Find out the details on Amateur Radio Newsline report number 1401 coming your way right now.

(Billboard Cart Here)

**

HAM RADIO IN SPACE: ECHO PREPARED FOR LAUNCH

The soon to be launched ECHO ham radio satellite has arrived safely at the launch complex in Russia and is being made ready for launch. This, according to Chuck Green, N0ADI, who is traveling with the bird to the launch facility. Bill Pasternak, WA6ITF, is here with more:

--

According to Green, once he and the team arrived at the launch site, the satellite shipping containers were opened and placed in the clean room. ECHO was taken out of it's shipping case and set up for completion. The bottom antennas were then installed.. So was the bottom solar panel, magnets, and corner reflectors.

ECHO was then powered on and the team successfully communicated with it over a hard wire connection from a computer. The four two meter receivers and the two 70 cm transmitters were all successfully tested. And that's good news for everyone waiting for the new hamsat
to take its ride into space.

For the Amateur Radio Newsline, Bill Pasternak, WA6ITF, in Los Angeles.

--

Currently the planned launch period for ECHO is four weeks beginning June 28th. Once in orbit the command teams will be working together to assure everything is working OK and get ECHO into its initial 'normal' modes as quickly as possible. After that it will be open to the users in the ham radio community. (AMSAT)

**

THE BPL FIGHT: AN UPDATE ON WHAT'S HAPPENING IN THE USA

The fight to keep Broadband Over Powerlines from going nationwide continues. Amateur Radio Newsline's Mark Abramowicz, NT3V, is here
with the latest:

--

With summer now here, expect the Broadband over Power Line Internet access issue to heat up - especially as more people get a chance to look over the latest filing from the National Telecommunications and Information Administration.

The federal agency, which advises the White House on telecommunications policies and oversees radio spectrum used by government agencies, weighed in with more BPL comments in a June 4 filing with the Federal Communications Commission.

And the American Radio Relay League and others who've analyzed the comments say it's clear the political considerations are overshadowing the engineering data which raises many questions about the viability of BPL.

In its filing with the FCC, the N-T-I-A's policy makers now call BPL a win-win situation for all and make what some call an outlandish claim - that deployment of the technology could actually lead to reduction, that's right, reduction of power line noise.

Now, the engineering types who've been studying the BPL and doing all kinds of test measurements are really scratching their heads trying to make sense out of that. The N-T-I-A filing also contains this comforting assertion for BPL opponents. It says that the current power line system is responsible for even greater local interference risks than what BPL would bring.

And, it says, B-P-L operators would implement procedures to eliminate any harmful interference.

The stack of complaints about BPL test sites and assertions by a lawyer representing one of the large utilities testing the technology might lead some to question that reassurance.

A source tells Amateur Radio Newsline the FCC has failed to "properly direct" BPL complaints to the appropriate FCC regulatory office for action. And, the source says, commissioners questioned about that haven't offered any explanation.

And a lawyer who has commented in writing to the FCC about some of the BPL complaints his utility company received claimed there was no basis for them, essentially saying the amateur radio operators making them don't know what they're talking about.

One thing the NTIA did suggest in its filing is the exclusion of certain bands and frequencies in specific geographical areas to protect critical government systems.

Does that suggest an agency confident BPL won't be an interference source?

The American Radio Relay League and others who've been vocal in this fight suggest otherwise.

They say BPL is far from a done deal and they're hopeful that the FCC's extension of reply comments to June 22 will net some helpful information. And, they say, they're not giving up or going away quietly.

In the meantime, there is a sense BPL is on a fast-track at the FCC where the majority of the commissioners view it as an engine to help stimulate the economy.

Could the FCC act on the BPL issue before the November election?

Anything is possible. And some close to the BPL debate say if the Bush administration believes it will generate a much-need bump in the public opinions polls or at the ballot box...well, you get the idea.

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia.

--

Mark will continue to monitor the B-P-L situation and report back in future Amateur Radio Newsline reports. (ARRL, CQ, Repeater Journal, Published news reports, others)

**

THE BPL FIGHT: AUSTRALIA REACTS TO THE BPL CHALLENGE

The United States is not the only place planning to introduce this controversial Internet access technology. Proposals for Power Line Communications or Broadband over Power Lines in Australia have become a concern many spectrum users down-under. This includes the Wireless Institute of Australia which is that nations Amateur Radio national society. From Brisbane, Q-News Graham Kemp, VK4BB, reports:

--

WIA President, Michael Owen, VK3KI has said that the WIA's position in relation to B-P-L is that it supports increasing broadband access and broadband competitiveness in Australia, but in a way that does not cause interference to legitimate users of the High Frequency spectrum. The WIA supports the development by the ACA of policies for BPL that protect existing users.

The WIA believes that one of the problems associated with B-P-L is that trials on a limited basis are not good indicators, and that the full effects of a problematic technology will not be seen with such trials. The WIA considers that B-P-L will not really serve the community's long run needs because of its limited bandwidth. A deep fibber network is to be preferred to using long runs of power lines.

The WIA has appointed a team to deal with this issue. WIA President has appointed Phil Wait, VK2DKN the director responsible for developing and advocating the WIA's position in relation to BPL. He has asked Owen Duffy, VK1OD Barry White, VK2AAB and David Wardlaw, VK3ADW to assist Phil, as the WIA's BPL Team.

--

A report on a recent small trial of B-P-L in the city of Hobart to some 4 houses and 2 floors of one building is on the WIA website. (Q-News)

**

Break 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the VE9BSQ repeater serving St. John, New Brunswick, Canada.

(5 sec pause here)

**

RADIO RULES: COMMISSION ADOPTS SPECTRUM SHARING PLAN FOR L AND S BAND

The Federal Communications Commission adopted a spectrum sharing plan for low earth orbit satellite systems in the 1.6 GHz and 2.4 GHz bands. The so-called Big Leo birds. And here's how it will work

In the 1.6 GHz or "L-band," mobile-satellite service operators with satellite systems that utilize code division multiple access and time division multiple access technologies will share 3.1 megahertz of spectrum at 1618.25 to 1621.35 MHz. At "S-band," the Commission allocated the 2495 to 2500 MHz band to fixed and mobile except aeronautical mobile services, in order to provide additional spectrum and to accommodate the relocation of Multipoint Distribution Service channels 1 and 2.

The commission says that its new spectrum sharing plan will further the agency's goal of efficient frequency utilization by increasing the number of providers offering services to consumers over the same spectrum. It will promote the deployment of more innovative services to consumers. (FCC)

**

ENFORCEMENT: COUNTY HAS DONE NOTHING WRONG

The FCC says that a complaint that a county is using ham radio for its routine business is without merit. The agency's Daryl Duckworth, NN0W, is here with more:

--

Duckworth: "A complaint concerning Bell County Communications
Center
and club license W5BEC was dismissed. There is no showing that this
station is operated by anyone other than amateurs, nor is there a
showing that it is there a showing that it is used or intended to be
used for routine county business."

--

W5BEC is the club station license issued to the Bell County Emergency
Operations Center in Belton, Texas. Its also the call sign of a wide
area two meter repeater that covers much of central Texas. (FCC,
RAIN)

**

ENFORCEMENT: STAY OFF 10 METERS

Meantime, the FCC's crackdown on 10 meter unlicensed intruders
continues. This time the agency acts in a New Jersey case. Again,
the FCC's Daryl Duckworth, NN0W:

--

Duckworth: Auto Elite Transportation of Morristown, New Jersey, has
been sent a warning notice about a vehicle of theirs; truck number
2113, as being the source of unlicensed radio transmissions on 28.085
Mhz."

--

Auto Elite was warned that continued unlicensed operation of radio
transmitting equipment without is a violation of Section 301 of the
Communications Act. That it could subject the operator to fine or
imprisonment, as well as seizure of any non-certified radio
transmitting equipment. Monetary forfeitures for this kind of
violation normally ranges from $7,500 to $10,000. (FCC, RAIN)

**

ENFORCEMENT: SAN DIEGO'S 96.9 MHZ PIRATE REACTIVATES

According to a news bulletin from Chris Carmichael appearing in the
CGC Communicator, San Diego's 96.9 MHz pirate is back on the air.
Chris says that there is no news on the location of the transmitter,
but he believes that will only take the Commission a short time to
figure out. (CGC)

**

ENFORCEMENT: SPAMMER GOES TO JAIL

A New York state man who sent out millions of "spam" e-mails has been
sentenced to three and a half to seven years in prison. This

according to a May 27th news release from that states Attorney General's office which said that Howard Carmack, known as the "Buffalo Spammer," received the maximum sentence for 14 counts of identity theft and forgery.

A spokesman for New York Attorney General Eliot Spitzer said that Carmack sent out hundreds of millions of bulk e-mail messages. That he flooded inboxes and saddled Internet providers with millions of dollars in costs. But it was his use of stolen identities and forged addresses that caused action by state prosecutors. New York has no state laws specifically dealing with spam. Carmack was found guilty of violating state forgery and identity-theft laws in April.

Internet provider EarthLink Inc. won a $16.5 million judgment against Carmack last year, and EarthLink officials testified in the criminal trial as well. (Published news reports)

**

EMERGING TECHNOLOGY: EARTHLINK VS. PHISHERS

Meantime, EarthLink claims that it has developed a program to fight phony websites like this,. The sites, called phishers are those designed to deceive e-mail users into providing personal information such as passwords and credit card or Social Security numbers.

Phisher sites pronounced "fishers" but with a leading "p" are called
that because they "fish" for personal information that can be used in identity theft. They work by telling an Internet user via e-mail that there is a problem with the service-provider account and providing directions to a Web site for clarification. The link takes the user to a hoax Web site that may be a perfect copy of a real page used by Earthlink, eBay or another legitimate business. That is where the user is deceived into providing personal information.

EarthLink's anti-phisher program will rely on a list of known fraudulent sites. When a subscriber responds to the e-mail message, he will be linked instead to a special Web page that warns the e-mail is a fraud. The site also will provide a chance to report the hoax attempt.

EarthLink says that it receives about 40,000 telephone calls or e-mails each month from subscribers who have received one of the fraudulent e-mails. (Earthlink)

**

HAM RADIO BUSINESS: A SEARCHABLE CQ MAGAZINE ARCHIVE

Finding an article or an advertisement in a back issue of CQ Magazine is about to become only a mouse click away. This, as CQ Communications and Buckmaster Publishing announce plans to create a searchable on-line archive of CQ magazines back issues.

Buckmaster, which produces the Hamcall CD has for decades filmed issues of CQ onto microfiche for use by researchers and hobbyists. Buckmaster also provides advanced scanning and searching technology for on-line posting of documents for major corporations. Now this same technology will be applied to back issues of CQ.

As currently envisioned, searches will be free, while access to reading and printing specific pages will require a subscription at a nominal fee. Eventually Buckmaster plans to have every issue of CQ available dating back to the magazine's first issue in January 1945.

A beta test version covering CQ from 1990 to 2002 is already on-line. The archive may be accessed at http://hamcall.net/cgi-bin/cqcgi. (CQ)

**

WITH ARNEWSLINE: YHOTY NOMINATIONS CLOSE JUNE 30TH

And a reminder that the nominating period for the 2004 Amateur Radio Newsline Young Ham of the Year Award closes midnight on Wednesday, June 30th. If you are planning to nominate a youngster for this years award or, if you want to update a previous years nomination -- and have not yet done so -- you have only about two weeks left to do so.

The Young Ham of the Year Award program is open to any FCC licensed young radio amateur age 18 or younger residing in the contiguous 48 states. He or she must have made a significant contribution to the community, the nation or ham radio though the United States Amateur Radio Service.

More information and a downloadable on-line nominating form is at our website. That's in cyberspace at www.arnewsline.org.

Again, the cutoff for nominations this year is midnight on June 30th. The award presentation takes place in August at the Huntsville Hamfest in Alabama. (ARNewsline(tm))

**

BREAK 2

This is ham radio news for today's radio amateur. From the United
States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

EMERGING TECHNOLOGY: INSTANT MESSAGING EXPANDING WORLDWIDE

Wonder where some of your ham radio buddies are these days? Maybe they are now using Instant messaging instead of 2 meter FM. Norm Seeley, KI7UP, has more:

--

According to Tech Web News, Instant Message use is growing steadily among corporate workers who use free services from companies like America Online, Microsoft, and Yahoo to send quick text messages to coworkers, family, and friends. And by 2008 closer to 80 percent of corporations worldwide are expected to use either public or private Instant Messaging networks.

A recent study by The Radicati Group says that by 2008 the number of Instant Message users worldwide is expected to reach 670 million. Business wise, this equates to revenues in the $413 million range.

Even so, the percentage of people using public networks and private networks is expected to remain the same. That's at 88 percent public and 12 percent private, respectively. The reason: Its hard to get people to pay for what someone else is giving away for free.

For the Amateur Radio Newsline, Norm Seeley, KI7UP, reporting.

--

Ham radio groups are also turning to Instant Messaging. According to Internet postings, it comes in handy when there is a net to be held and propagation goes away. (TechWeb Online)

**

HAM INTERNET NEWS: THE VHF REFLECTOR BACK ON LINE

And speaking about instant messaging, or almost instant messaging, news that the VHF Reflector is back on line. This, according to Bob Vaughan, KC6SXC, who oversees the systems operation.

In a posting, Vaughn explained that the W6YX server that hosts the VHF Reflector suffered a disk failure and was off line for the past month. Vaughn says that the team has now recovered the data from the failed disk and has put the system and the Reflector back on-line. (VHF Reflector)

**

ON THE AIR: KY REPEATER NEEDS A NEW HOME

The Repeater Journal reports that the Danville, Kentucky, 146 point 655 WD4DZC repeater is looking for a new site. According to trustee George Griebe, WQ4Z, the tower supporting the systems antenna is to be taken down and will not be replaced.

Griebe says that the Wilderness Road Amateur Radio club which sponsors the repeater plans to keep it on the air from a temporary location with reduced coverage. Meantime the club is continuing its

search for a suitable, high level, wide coverage permanent site. (Repeater Journal)

**

THE SOCIAL SCENE: OHIO IN JULY

Turning to the ham radio social circuit, the 7th annual OH-KY-IN hamfest is slated for the July 24th at the Diamond Oaks Career Development Center in Cincinnati Ohio. The event will feature commercial vendors, a flea market and much more. Information is on line at www.ohkyin.org or by e-mail to n8bv@juno.com. (OH-KY-IN)

**

THE SOCIAL SCENE: COLORADO IN JULY

And the Northern Colorado Amateur Radio Club will hold its 2004 Superfest at the Budweiser Events Center in the Larimer County Fairgrounds on July 17th. Talk-in is on the 145.115 Mhz repeater with a 100 hertz tone access. For information on this one contact Willis Whatley, WA5RVL, at his Callbook address. (E-mail)

**

INTERNATIONAL - GREECE: HAM RADIO AT THE SUMMER OLYMPICS

Some more good news for foreign radio amateurs visiting Greece for the Summer Olympic Games. From the August 1st through September 15th hams from CEPT signatory nations will be permitted to operate in Greece without the need to submit any papers for a license. They will also be allowed to use the special prefix J42004. Meantime, Greek radio amateurs can use the special prefixes SX2004 or SY2004 through the 15th of November in celebration of the games. (GB2RS)

**

DX

In D-X, word that MM0AFJ will be on the air from the Island of Harris. This, from the 27th of June until the 2nd of July, mainly in the mornings on 80 to 10 meters CW and SSB. There may be some activity on 160 meters in the evenings. Requests for skeds should be sent via e-mail to m0afj@tiscali.co.uk. QSL direct to MM0AFJ at his Callbook address. (RSGB)

Also, IK4RUX reports he will operate portable IF9 on HF SSB from Favignana between the 19th and the 26th of June. Side trips to other islands in the Egadis group as well as some lighthouse operations are also possible. QSL to the operators home call or via the bureau. (RSGB)

**

THAT FINAL ITEM: HAM RADIO HONORS THE MEMORY OF PRESIDENT RONALD REAGAN

And finally this week, ham radio finds a way to honor the memory former President Ronald Reagan. Here's Bruce Tennant, K6PZW with the
rest of the story:

--

Two suburban Los Angeles area radio clubs are joing forces to honor the memory former President Ronald Wilson Reagan. This, by operating Field Day in his honor from the Reagan Library in Simi Valley, California.

According to Peter Heins, N6ZE, the two groups joing forces to honor the late United States president are the Ventura County Amateur Radio Society and the Conejo Valley Amateur Radio Club. The Ventura County group has operated Field Day before from the Reagan Library. This year, the Conejo Valley club will be joining with them for the first time.

Heins says that 2004 is the fourth year a special event will have been held at the Reagan Library using the special N-6-R call sign. The previous three were dedicated to all members of the former first family. This years Field Day operation will be specific in its remembrance of President Reagan who died of Alzheimer's disease
on
June 5th at age 93.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

Field Day 2004 is the weekend of June 26th and 27th. Visitors to the Reagan Library will be able to listen in on amateur radio communication, talk to amateur radio stations located in other countries, and find out more about obtaining an FCC Amateur Radio License of their very own.

Also, the complete Field Day rules are on-line at the ARRL website. Its in cyberspace at www.arrl.org (N6ZE)

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937,

Arcadia, California 91066.

Again, the cutoff for submitting nominations for this years Young Ham of the Year Award is midnight on June 30th. The award presentation takes place in August at the Huntsville. Full details are on our website at www.arnewsline.org

Also, don't forget Field Day the weekend of June 26th and 27th. We'll see you on the air.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Don
Wilbanks, AE5DW, saying 73 and we thank you for listening." Amateur Radio Newsline(tm) is Copyright 2004. All rights reserved.

>> >Robeson K4CAP) writes:
>>
>>
>> In the 50's and 60's we didn't have the technology.
>
>(to send people to the moon)
>
>> We barely had the
>> technology to get to the moon in the 70s.
>
>Had it by 1969, to be exact. The Soviets sent unmanned probes there
>about a decade earlier.

Well, Jim, if you want to get THAT specific we were actually crashing
RANGER probes into the moon in the early 60's...

I thought that "...in the 70's" was fairly generic since we landed there
in 1969 and all of the rest of the landings occured before we were out ov Viet
Nam.

>> History has shown us that most major "jumps" in technology and society
>> happen in the wake of war.
>
>Some jumps, yes, but I don't know about "most".

Then some review of American History is in order.

With the exception of the Revolution, most technological advances were
during or immediately after some major conflict, especially since 1860.
(Please note the use of the word "advancements", not necessarily inception)

Civil War: Creation of the present ambulance services, advances in trauma medicine, advancement of the railroads and wireline telegraphy. Photography becomes popular.

World War 1: The airplane was just a motor driven kite in 1914, and is ready to span the Atlantic in 1919. The radio comes of age. New advances in the treatment of diseases (from the study of sanitation in the trenches).

World War 2: Mass production of antibiotics (developed in the 30's, but not considered a priority until the war), development of RADAR, the jet engine, further advancements in air travel as a result of the development of pressurization. Missle technology emerges. Microwave and X-Ray technology skyrockets.

Korea: Use of the helicopter for medical evacuation. Proliferation of the television. Satellite communications.

Viet Nam/Moon Missions: Advancements in microprocessors, additional advancements in trauma care (MAST pants, use of helicopters in civilian MEDEVAC, previously considered too expensive due to limitied manufacture of helos) IR/NVG technology.

SDI/Cold War: Space imaging, proliferation of LASER devices, especially into medical field.

> In many cases those
>"jumps" would have happened anyway, or are the result of massive
>investment by governments that would be considered "socialistic" in
>peacetime.

Oh..."would have happened anyway"...?!?!

I don't think so, Jim. All of the major developments of other technologies or services only happened where there was major subsidies by governments. Some, such as the expansion of oil refining, etc, only happened after the development of the automobile, one of the few exceptions to the above.

>Or they're the result of government programs that are done
>to soften the conversion to a peacetime economy.

Uh huh...government subsidies. Again, big influx of cash from taxes. MAY have happened otherwise, but it didn't.

>In any event the cost far exceeds the benefits.

Oh?

How much do you pay for a calculator these days?

How much did you pay for the last Amateur transceiver you bought?

Have you ever had an X-Ray or CT scan?

All of those technologies have benefited from government spending in order to advance military or space technology.

>> RECENT history has shown that we made some pretty significant strides
>> based on the Apollo program alone.
>
>Such as? Tang and Teflon existed before NASA.

And most mathematical or engineering calculations were performed with a
slide rule or pencil and paper.

>No one has been back to the moon in 32 years and there are no serious
>plans to do so anytime soon. The technology to do it would almost have
>to be reinvented.

Why? Did we get stupid in the last 30+ years?

Quick/Cheap/Dirty plan...A lunar lander configured to ride in the Shuttle
bay. The Shuttle carries it to the Moon, the mission drops in, and brings at
least part of the lander home for re-use itself.

>> For those who insist that "we need to spend the money here", I ask
>WHERE
>> in space are you going to spend that money?
>
>We need to spend the money in ways that will directly benefit people
>here. And address problems long-term.

Oh?

NASA doesn't need people who are less-than-engineering qualified...?!?!
If we pump up NASA for a new deep space or lunar program, it means that every
company that contracts with it would be able to

And WHAT problems are NOT being addressed long term BECAUSE of the space
program?

>> A bit of government subsidising would promote yet another wave of
>> technical advencement.
>
>Agreed - spent in the right places. That's the principle that drives
>those "Tax and Spend Democrats!!!"
>
>Trips to the Moon and Mars will require a lot more than "a bit of
>government spending".

But we can also defer that with cooperation with business against futures
for mining, technology development, etc. The opportunities are there...We just
need to have the gonads to take them.

>It was in the Nixon/Ford years that the big NASA cutbacks took place.
>Too much money, they said. There was supposed to be an Apollo 18 lunar
>mission - it was cut and the Saturn V for it became a museum piece.
>Literally.

Yep...the public lost interest since there was no "obvious" return on thier
investment other than national pride. However the long terms benefits have
been overwhelming.

NOW...if we were to take the chance on an expedition or perm/semi-perm base on the Moon to determine it's value to be harvested...?!?!

>All of NASA's manned budget went into the shuttle, which is a
>marvelous system with a 1 in 75 chance of complete mission failure.
>The number of shuttles lost compared to the number of missions flown
>verifies the reliability analysis.

Things that are filled with hundreds of tons of volatile combustables are bound to go boom.

As for your "reliability analysis" try the numbers based on miles flown...(Just proof that you can make any set of numbers look good/bad)

>The reason the USA made the big space commitments was because JFK and
>LBJ (guess what party) pushed for them.

Do you think it would have been different with Nixon in the White House in 1960? He was an avowed anit-Communist. Do you think he might not ahve made the same challenge, faced with the same circumstances...?!?! I bet he would have made the challenge earlier than JFK did.

>They were essentially done to
>compete with the Soviets for the "high ground" of space. Recall that
>practically all of the important early space firsts (first earth
>satellite, first animal in space, first human in space and in orbit,
>first woman in space, first mission to another heavenly body, first
>pictures of the far side of the Moon...) were done by the Soviet
>Union. And most of their early accomplishments were complete surprises
>in the West. The USA played catch-up for years. JFK and LBJ knew that
>if the Rooskies could orbit a man and bring him back safely, doing the
>same with a nuclear weapon would be a piece of cake for them.
>
>Today there is no such need or competition.

There's ALWAYS a need for competition, Jim. No..we don't need to build a bigger, more deadly nuke, but a bit of friendly rivalry goes a long way towards building a better and cheaper mouse trap.

>The cost was staggering but they had the political clout to do it.
>They could sell it to everyone on the national security agenda. And it
>didn't hurt that a lot of the money was spent in states like LBJ's own
>Texas. (Why is the control center for manned flights in Houston when
>the launch facility is in Florida?)

I am sure that having been in LBJ's home state had soemthing to do with it...But being more-or-less half way between FL and CA helped. Much of America's space program is out of Edwards and Vandenberg, if you will recall.

>Billions were spent on the space program in the '60s but when
>Americans needed quality fuel-efficient cars in the '70s they had to
>go to Germany and Japan for them.

Because American unions demanded wages that pushed the cost of American cars through the roof. Also, American tastes in automobiles up until then were

for bigger, heavier and faster..."Small" was not a generally popular concept in the 50's and 60's, if you'll recall. The Germans and the Japanese were forced by economics, infrastructure and geography to do "small".

>> I think the recent events in the Mojave also show that
>> a bit of entrepenurial spirit and investment can go a long way.
>
>As exciting as that effort is, all of it was done more than 35 years
>ago with the X-15.

Not by a private entrepreneur and not with the expectation of being able to carry two passengers.

Also, despite the similarities in delivery techniques (parasite lifter), the control and recovery techniques are different.

It took the USAF hundreds of millions of (1960's) dollars to do what these guys did for under $30M...I wonder what the 1960-to-2004 cost comparisons look like?

>And it was done without government funding. So why do we need NASA for
>manned flights at all? Let the private folks do it on a self-funded
>basis.

OK...so we sit out manned space flight until private investors can get up-to-speed with governmental levels of service...?!?!

>> So why not Mars?
>
>Because the cost and risk is simply too much for the benefits. Do you
>have any idea what a mission to Mars would require in terms of how big
>and complex the ship(s) would have to be, how long they'd be gone, and
>how completely on their own they would be?

Yes, as a matter of fact I do.

And I cannot see those costs getting any less impressive if we wait until 2014 or 2024 to do it.

>Mars is orders of magnitude more difficult than the moon. Apollo
>missions were no more than two weeks, Mars missions would be over a
>year long. The Martian surface is in some ways more hostile than the
>lunar surface and the landing physics much more difficult (Martian
>gravity is stronger). Look how many unmanned Mars missions have failed
>completely.

So again...we bring human exploration and technology to a screaming halt due to our fear of the cash register?

And as for the failed Mars missions, do you think that maybe if there had been someone there to fix the problem that the mission could have proceeded?

>Heck, figure out radio propagation delay to Mars....

Yep...same 186,000MPS that wew ahve here on Earth...

>What benefits would a manned mission to Mars give that could not be
>had any other way?

Having a Human Being actually stand on it, for one.

>And how much all of it would cost?

Who cares? We poor billions into pork barrel projects that DON'T provide
ANY return every year...why not spend it on something that will...?!?!

>> Why not research stations on the Moon?
>
>How much are *you* willing to pay for them in tax dollars? That's
>really the bottom line. People are all for space exploration and such
>until the bills for it show up.

See above. Imagine what the communications possibilites alone would be by
using the moon for alternative wireless technologies...

>> Unless you want
>> to ressurect the "world is flat" or the "we never went to the Moon"
>> conspiracies, what other legit reasons can you think of to NOT do it?
>
>Simple: The costs outweigh the benefits. There are easier, cheaper,
>faster ways to get the benefits and solve the problems we have on
>earth.

Oh? They are...?!?!

>Space and war may help with some things but they are horribly
>inefficient means of progress.

So we just wait until a more efficient way is developed? Until they
develop the "transporter"...?!?! Until Zephraim Cochrane develops warp drive?

>None of this means we shouldn't go into space, just that we need to do
>so in a way that is balanced with other needs and programs.

So we just mark time until...when...?!?!

I had hoped to not be working this weekend, however I'm stuck.

Quite a few years ago I had built a small wind generator and had it on the roof of the barracks I was in. It charged two marine (no pun intended) deep cycle trolling motor batteries and those in turn ran my ICOM IC-730.

I ran it at 35-50 watts CW and >>I<< ran out beofre the batteries did!

I've been wanting to build another, and perhaps I will before next Field Day.

Not quite. :-) What was launched 27 Aug 62?

> I thought that "...in the 70's" was fairly generic since we landed there
>in 1969 and all of the rest of the landings occured before we were out ov
>Viet Nam.

Might have happened in nursieworld but not in reality.

What was launched 5 May 61?

Official USA involvement in Vietnam War was 1962 to 1975.

Apollo 17 (last manned moon mission) was December 1972.

Did your might aerospace involvement in nursieworld have
different dates?

>>> History has shown us that most major "jumps" in technology and society
>>> happen in the wake of war.
>>
>>Some jumps, yes, but I don't know about "most".
>
> Then some review of American History is in order.

Ah, all sorts of cribs from an almanac? :-)

Nursie was THERE, very INVOLVED since Revolutionary War?

Tsk, tsk, tsk. NOT about amateur radio, is it?

Morse-Vail Telegraph first operated in 1844. Landline.

Radio as communications means first demonstrated in Italy
and Russia 1896.

Amateur radio not there by definition of amateur radio. Had to
wait until 1912 and first U.S. radio regulating agency start, also
first radio amateur licensed.

Nursie need MUCH help from his buddies in aerospace, those
INVOLVED there. No "amateurs" in space biz...until 2004,
then NOT amateur by definition, but "private" developers.
[nursie need to tell tales of Kern County Airport #7 from which
SpaceShipOne was launched and landed?]

Amateurs NOT make launch vehicles to put up ham sats.
Keep that in mind. Ham sats just lab curiosities until launch
vehicle available to put them in orbit.

<remaining cut-and-paste omitted...partly for accuracy>

> I don't think so, Jim. All of the major developments of other
>technologies or services only happened where there was major subsidies by
>governments. Some, such as the expansion of oil refining, etc, only happened
>after the development of the automobile, one of the few exceptions to the
>above.

Nursie say in other message that ham radio "different" physics than
all other radio. Must be New Development, only nursie know.

Amateur radio NOT oil drilling/refining, vehicular technology.

Nursie need stick to subject...at least within a light-year.

> How much do you pay for a calculator these days?

Hewlett-Packard HP-32 SII is $60 off the shelf, consumer
item. Scientific, programmable.

Nursie have pocket-size calculator of scientific notation?

> How much did you pay for the last Amateur transceiver you bought?

Rev. Jimmie Who "builds his own." :-)

Can nursie build his own?

> Have you ever had an X-Ray or CT scan?

Ham radio parts might need X-raying, but Computer Tomography
only used on hams.

Nursieworld need Magnetic Resonance Imaged...find all bad
resonances, make resonances stay WITHIN ham bands as
legally approved and licensed by FCC.

> All of those technologies have benefited from government spending in
order
>to advance military or space technology.

Riiiiight. Nursie describe his many years in aerospace biz?

Nursie INVOLVED in space biz? Properly licensed as rocket
man?

Nursie CANNOT be "interested" in space biz without being
properly licensed by FCC. Heilian logic. Applicable this
newsgrope.

>
>>> RECENT history has shown that we made some pretty significant strides
>>> based on the Apollo program alone.
>>
>>Such as? Tang and Teflon existed before NASA.
>
> And most mathematical or engineering calculations were performed with a
>slide rule or pencil and paper.

In nursieworld, yes. In REAL world, NO.

Do astrogation problems, nursie. 3-digit accuracy on slide-rule
NOT GOOD ENOUGH.

>>No one has been back to the moon in 32 years and there are no serious
>>plans to do so anytime soon. The technology to do it would almost have

What part of mighty nursie plan involves AMATEUR RADIO? :-)

Mission Control moved to Tennessee? To Newington? :-)

<more nonsense from "involved" rocketman deleted for sanity>

> So we just wait until a more efficient way is developed? Until they
>develop the "transporter"...?!?! Until Zephraim Cochrane develops warp
>drive?

Rocketman nursie watch too many episodes of Star Trek. Star
Trek FICTION, not reality.

Star Trek NOT about amateur radio or ham radio policy.

Nursieworld is defunct for logic, analogies.

>>None of this means we shouldn't go into space, just that we need to do
>>so in a way that is balanced with other needs and programs.

Nursie already spaced out. Need help, grounding.

Temper fry...

Then educate them. You have the mighty certificates, you have the technology..."train" them.

Choo choo. :-)

>> BPL will be the demise of low-level-signal HF communications in
>> urban areas.
>
>FCC and NTIA say differently

The FCC has NOT said much technically on Access BPL.

Docket 03-104 asked for input on BPL.

Docket 04-37 asks for comment for a proposed R&O.

NTIA said "A 10 db increase in background noise is acceptible!!!!"

>> Kiss off any thoughts of signal-to-noise ratios
>> required in modern receivers. All that advanced technology will
>> go to waste. Hams can go back to using one-tube regenerative

>
>Never used a regenerative receiver, have you, Len? That's obvious from your
>statement. A good one is as sensitive as a modern superhet on HF.

Poor baby. Joining in an attempted gang-bang of an NCTA?

My first receiver, built in 1947, was a regenerative. What did
you build in 1947, senior?

Last regenerative receiver I checked out (for son of friend) was in
1968 (give or take). Had an RF stage ahead of detector, too.
Had MAYBE 5 uV input "sensitivity" at best (if one squinted their
ears), was terrible in selectivity, full of intermods from other
strong signals adjacent. Didn't tell friend or son it was that bad,
made nice-nice, gave only technical figures (they were impressed).

Are you going to make a case FOR widespread Access BPL,
Rev. Jimmie Who?!?

Did we see your pearls of technical and economic wisdom in
multi-page Comments on docket 04-37?

Say goodnight.

Yes there was. :-)

Now what is der oberst going to do about it?

Make that a "central issue" or something? Recite the UCAJ at
an Court-Amateur? [UCAJ = Unimportant Case of Amateur
Juxtaposition]

Hey! Let's make that a New Thread! Make it Several New
Threads! Use all the vile epithets and nastygrams your nasty
lil mind can think up. Vomit all over those who don't agree with
you!

In other words, you will act the same as you have for years.

Sieg Heil and Temper Fry...

>
> The POINT, Your Junior Putziness, is that Lennie doesn't HAVE the
>experience to help the kid OTHER than the theory part.

Riiiight...just five-plus decades of experience beginning around 1947.

OH! Maybe the gunnery nurse is going to address the troops at
morning assembly again:

"Amateur radio WORKS DIFFERENT that all other radio services!"

Right..."amateur electrons" instead of commercial ones. Uh huh.

Poor nursie...thinks the FCC can regulate Laws of Physics too!

> He can't help with testing, other than to refer him to someone else.

Riiiight...amateur radio WORKS DIFFERENT than all other radio.

Unca Stevie da gunnery nursie gave us the command orders!

> He can't help with the Code (should "the kid" desire to learn it), other
>than to refer him to someone else.

Riiiiight...no amateur radio transmitter can WORK on HF without
the "opertator" being tested for manual telegraphy. :-)

Da gubmint and da Army use COMPUTER PROGRAMS to
teach morse code cognition at Fort Huachuca, AZ. Do dat mean
da computers gotta be LICENSED IN HAM RADIO?

> He can't help with tutoring "the kid" on proper Amateur Radio operating
>technique, other than to refer him to someone else.

Riiiight. PROPER PROCEDURE AND PRACTICE ON THE HAM
BANDS IS MOST IMPORTANT! Hams and hamsters can get
fired if they screw up on procedure, lose their social status, be
taken out and shot in the AM...and then be chewed out by the
Super Chief Master Gunnery Nurse!

A fate worse than death.

Those that don't use proper procedure might never OPERTATE
again!!!

> He can't help with...well....I can go on and on....

Poor nursie, still obsessed with hate.

> It's NOT about working "both ends against the middle".

Riiiight...it is capitulation to the loudmouths like gunnery nurse
and herr robust and like-minded self-righteous control freaks of
olde-tyme hamme raddio.

> It's about what contributions Lennie has alledgedly made to Amateur
>Radio.

WOW! New requirement!

All newcomers MUST CONTRIBUTE to ham radio BEFORE they
get licensed!

Hits a new high in the extra nobility snob category...all serve the
might lords of telegraphy FIRST...then they MIGHT let one come
into "their kingdom" if one groveled well enough to suit their
noble blue-blooded righteousness.

> Easily summated, it's ZERO.

Tsk, tsk, tsk. Nursie done expressed all kinds of "informed
opinions" on national and world economy, the socio-political
climate, ad nauseum, and has ZERO credentials or smarts in
that!

NOTHING. NADA. ZIP.

Subject didn't touch ham radio within a light-year but here his
mightyness be sitting, spittle shooting out in rage of denigration
of others, and then NOT knowing radio physics.

>His only "professional" affiliation with
>Amateur Radio went belly-up a long time ago. Furthermore there's not a single
>reference, footnote or other attribution of an LHA-authored HR article in ANY

>technical text outside of that defunct magazine, and even then, that's 20+
year
>old information.

Tsk, tsk, tsk. Nursie need to read more. :-)

Nursie not know radio theory, certainly not electronics in general.

Nursie need to check out UK website having listings of
radio articles.

Nursie think FCC can make electrons, fields, and waves "act
different" by law if they separate "amateur" radio from all other
radio!

Nursie gots to get more education in theory to UNDERSTAND
technical subjects written up in publications. Memorizing the
sales phrases and jargon in QST advertisements not enough.

Nursie are not right in head.

> As you can see, no luck was needed...just facts.

"Facts" in nursieworld much different than reality.

Nursie "facts" not same as real-world facts.

Temper fry...

Big Dave - better known as Herr Robust for his military rank - shucks
and jives more than a jazz band let loose in an Iowa corn field at
harvest time.

He might have been "opertating" his new transceiver and is suffering
from too many oriongasms. He might need Vigoro from Canada for
his mental erectile dysfunction? [he might find out that there's been
an electronics world definition of "software" and "firmware" and
"hardware" for over three decades...but never saw it in QST so
therefore doesn't apply]

Heil wastes everyone's time. :-)

>> "Legalities?!?" :-) For an unlicensed radio service?!?
>
> Don't show more ignorance than what you have already shown us, Lennie.
>
> FRS is regulated under Part 95 of the >>FCC'S<< Rules and Regulations.

...and NO LICENSE is required to use one. :-)

Not in "Part 15" that nursie keeps bringing up...:-)

> CAP, as a defacto federal agency (as attested to by the Department of
>Defense, Department of the Air Force and the Attorney General of the United
>States...) is obligated to operate under NTIA.

Wow! That sounds so OFFICIAL!!!

I'll bet all the CAP aces have cute uniforms with pretty patches
and salute one another on or off the flight line...

> The criteria for federal agencies operating on FCC regualted radio
>services is very narrow. "Routine" communications and communications
>conducting the business of the organization are NOT "authorized" uses.
>Opertional missions are not "legitimate" uses either, except where
>inoperability or coordination with other rescue agencies is critical, are not
>authorized either.

"...where inoperability?!?" :-)

> These "restrictions" are not solely applicable to CAP. They apply to all
>other federal entities also.

You sound like the JIG...Judicial Inoperability Group.

Lots of word dancing. Doesn't mean much because the tune is
off key.

>> Maybe nursie suggest using MARS.
>
> Actually Civil Air Patrol has quite a few stations authorized to operate
>in Air Force MARS, Lennie.

Nursie say "Sorry Hans, MARS >>IS<< amateur radio!"

If MARS be amateur radio, it can't be "Air Force." Air Force be
military.

>> No, can't do that, nursie say "MARS >>IS<< amateur radio!"
>>
>> :-)
>>
>> Nursie made an "ace" of himself again.
>
> No...you did, Lennie. By your lack of practical experience and
>operational knowledge.

Nursie be stuck on "inoperability" with most things here. :-)

DoD 4650.2 (eff. 21 Nov 03). Ever hear of it?

> Putz..

Tsk, tsk, tsk. More "meaningful discourse?"

No, just nursie's dissing and cussing.

Perfect example of the best that ham radio can be?

Temper fry...

DoD authority on U.S. military matters. DoD define MARS. MARS is a military radio service.

FCC not military radio regulator. FCC not define MARS. FCC define U.S. amateur radio.

Nursie state, "Sorry Hans, MARS >>IS<< amateur radio."

Nursie make error, refuses to admit it directly.

Nursie mad as "heck" about making errors and having others show them in public. Tsk, tsk. Nursie not play well with others.

Nursie write snit about others who disagree with his opinions, sends personal insult and nastygrams about them. Not good behavior. Nursie say he have freedom to cuss and diss others. Nursie not able to play well with others.

Nursie just wanna FIGHT.

Nursie should learn about OPERTATING radios. Suggest good book, "Ham Radio for Dummies."

Nursie wanna be ultimate authority on ham radio in newsgrope, along with all PCTA. Nursie wanny scrub with ethnic cleanser, but can't come clean on own dirty errors. Bad, nursie, bad. Go sit in corner.

Temper fry...

> >
> Why a Beverage? It receives well in one direction only,

Which is his whole point.

> but in most of the USA
> you need more than one direction.

A FD listening Beverage is basically a very good idea. Yes, they're
directional but from here on the east coast where Mike is located
beverage patterns can cover most of the country if they're done right.
The big advantage Beverages bring to the game is very high
front-to-back ratios. I suspect that what he's talking about here is
stringing a Beverage generally west of the transmiting antennas thus
reducing the levels of the recieved energies of the harmonics (and
other assorted crud) from the other FD stations operating on the lower
bands. IF the near end of the Beverage is some significant distance
from the transmitting antennas in terms of wavelength.

The problem I see with Mike's plan is that a one thousand foot Beverage on, say 15M, is gonna have a pattern like a pencil and would be basically useless because of it's very narrow beamwidth. A more better idea might be optimized Beverages per band, compromise designs between beamwith and length.

In the end isn't it a bit late in the game for this discussion . . ?

There's that famous Heil selective memory at work. Next thing you
know you'll forget all about those out of band Frenchmen on 6 meters.

> > Then you guys set upon me like the pack of wild
> > dogs that you are...
>
> Which "you guys" would that be?

PCTA. Know any?

> > ...telling me of acts of heroism...
>
> Acts of heroism? I don't believe you.

Yup. And because they display bravery and heroism in the face of the
old-timey exams and examiners, all who wish to enter the Kingdom must
also face those same exams and examiners. But since those old-timey
exams and examiners have gone away, all the new hammies are just not
worthy. Common theme throughout R.R.A.P.

> > how you got the book
> > and read it and went down to the steely-eyed fcc examiner and became a
> > ham. No sir! No help from no one.

>
> A book can provide information to an extent.

A book can provide everything needed to become an amateur.

No good golfer became one
> by reading a book. No good fisherman became one by reading a book.

Would you like to add a few more non-radio related categories to your
list?

> No good radio op became one by reading a book.

Now you wish to qualify your statement with the word, "good," and
change the subject matter from amateur radio operator to
undifferentiated radio operator.

You have substantially changed the subject matter. Previously, the
subject was a young, unlicensed person wanted to know about Amateur
Radio. Have it your way.

One can become licensed in amateur radio simply by reading a -single-
book and taking an exam. Unless you are saying that those PCTA's who
told me so are liars.

> Practice and experience are the keys.

Of course, now that you've substantially changed the subject.

> Len has neither.

Above you say, "No good radio op became one by reading a book." You
don't differentiate between amateur radio operators and military radio
operators. Using your changed subject matter, Len has plenty of book
reading, training, practice, and experience. I might add that he also
has formal education in the subject matter.

> > You guys play both ends against the middle, and now that you've worked

It could be about your forgetfulness, but then there wouldn't be much
discussion, would there?

Radio amateurs are free
> to seek out information about the "larger world of radio" in any number
> of venues.

And Len disagrees?

You ought to take it up with Steve as he refuses to seek out
information about the "larger world of radio," specifically MARS in
which he claims to be a participant.

> Many radio amateurs have been or are participants in the
> "larger world of radio".

One in particular also participates in MARS and CAP communications,
but apparently has never been trained. He cannot differentiate
between the Amateur Service and MARS, repeatedly backing his statement
that "MARS >>>IS<<< Amateur Radio."

Hi, hi!

If you'd like to impress us, obtain an amateur
> radio license of any class and regale us with those tales.

What tales?

Steely-eyed FCC examiners?

Taking an exam on a lark, without studying, scoring perfectly, in under 8 minutes, and collecting $200 for passing go?

Naw, sounds too much like PCTA tales.

>becomes popular.

Bloodiest war in USA's history, fought in large part to decide whether it is OK for the country to split tiself in half so that some people (with light colored skin) can continue own other people (with dark colored skin). The fact that the dark colored skin people's ancestors were dragged from their homes by brute force is conveniently ignored by those who want to continue to own them.

Ambulance service and trauma medicine yes - because of so many wounded.
Railroads were well established before 1861. The main "advancement" was the standardization of lines in the South when they were rebuilt after beying heavily damaged during the war.
Wire telegraph had pretty much connected the developed world. The transatlantic cable was in service *before* Fort Sumter.
Photography was driven by a number of factors, not just the war.

> World War 1: The airplane was just a motor driven kite in 1914, and is
>ready to span the Atlantic in 1919. The radio comes of age. New advances in
>the treatment of diseases (from the study of sanitation in the trenches).

Chemical warfare advances. Unbalance of offensive and defensive weaponry leads to enormous death toles in trench warfare. Submarine technology increases hazards of sea travel.

Advances in flight and radio technology are logical outcomes of increased demand for those technologies.

>World War 2: Mass production of antibiotics (developed in the 30's, but
>not considered a priority until the war), development of RADAR, the jet
>engine,
>further advancements in air travel as a result of the development of
>pressurization. Missle technology emerges. Microwave and X-Ray technology
>skyrockets.

Genocide technology rapidly advanced by Germans. Atomic weapons developed, permitting both cities and their inhabitants to be incinerated at lower cost and effort. Digital electronic computer is developed to improve aiming of guns. 50 million dead, entire countries devastated, permitting massive rebuilding and modernization efforts postwar. War also facilitates Soviet expansion into much of Europe.

> Korea: Use of the helicopter for medical evacuation. Proliferation of
>the television. Satellite communications.

Satellite communications? Where?

> Viet Nam/Moon Missions: Advancements in microprocessors, additional
>advancements in trauma care (MAST pants, use of helicopters in civilian
>MEDEVAC, previously considered too expensive due to limitied manufacture of
>helos) IR/NVG technology.

Microprocessors first appeared in the early 1970s - developed for civilian
applications.
>
> SDI/Cold War: Space imaging, proliferation of LASER devices, especially
>into medical field.

>> In many cases those
>>"jumps" would have happened anyway, or are the result of massive
>>investment by governments that would be considered "socialistic" in
>>peacetime.
>
> Oh..."would have happened anyway"...?!?!

Yes. There is a logical progression of most technologies. It's called
engineering. You don't need a war to do it.
>
> I don't think so, Jim.

It's true.

>All of the major developments of other
>technologies or services only happened where there was major subsidies by
>governments.

Even if true, why does it take a war? Why not simply solve the problems?

>Some, such as the expansion of oil refining, etc, only happened
>after the development of the automobile, one of the few exceptions to the
>above.

There are *lots* of exceptions. The automobile is one. PCs are another. Modern
construction practices. Fiber optic communications. Lots of others.
>
>>Or they're the result of government programs that are done
>>to soften the conversion to a peacetime economy.
>
>Uh huh...government subsidies. Again, big influx of cash from taxes.

Which those "tax and spend democrats" are usually pushing...

>MAY have happened otherwise, but it didn't.

Why spend your own money if Uncle will give you some?
>
>>In any event the cost far exceeds the benefits.
>
> Oh?
>

Yes.

> How much do you pay for a calculator these days?

Nothing. Last calculator I bought was in the mid 1980s. I use the Windows calculator function. Free.

> How much did you pay for the last Amateur transceiver you bought?

$589 for the basic Elecraft K2 kit, which I assembled. Also has the ATU and audio filter options, which I assembled.

The Southgate Type 7 (completed 1995) was built from recycled parts and cost less than $100. The Type 6 (1985) cost a bit more. I've never owned any non-US made ham gear.
>
> Have you ever had an X-Ray or CT scan?

Dental Xrays since I was a kid. Never a CT scan. Had my first up-periscope last year....

>All of those technologies have benefited from government spending in
>order to advance military or space technology.

Wouldn't it make more sense to just develop the technologies straight out? If you need better medical Xray machines, develop them.

>>> RECENT history has shown that we made some pretty significant strides
>>> based on the Apollo program alone.
>>
>>Such as? Tang and Teflon existed before NASA.
>
> And most mathematical or engineering calculations were performed with a
>slide rule or pencil and paper.

The PC was not developed for the space program. Nor for the military.

And the Saturn V worked pretty good, didn't it?

>>No one has been back to the moon in 32 years and there are no serious
>>plans to do so anytime soon. The technology to do it would almost have
>>to be reinvented.
>
> Why? Did we get stupid in the last 30+ years?

Actually, yes. Much of the manufacturing technology no longer exists. Anyone who worked on those systems above a certain level is now retired, or close to it.
>
>Quick/Cheap/Dirty plan...A lunar lander configured to ride in the
>Shuttle bay.

That could work. I had the same idea years ago.

>The Shuttle carries it to the Moon,

Won't work. Shuttle system does not have enough fuel to leave Earth orbit, let alone enter lunar orbit and leave it again. And that's with the cargo bay *empty*.

If it could be done, NASA would have done it already.

The Shuttle has enough fuel to reach orbits of a few hundred miles but no more. Going to the moon is a lot more. That's why a Saturn V is so big yet the LM/CSM combo is so small.

>the mission drops in, and brings at
>least part of the lander home for re-use itself.

Only ways such a system could work is if the Shuttle stayed in earth orbit and the lunar package went from there.

And the result would be a short-term visit by a few astronauts, like the Apollo missions, not a long term base.

>>> For those who insist that "we need to spend the money here", I ask
>>WHERE
>>> in space are you going to spend that money?
>>
>>We need to spend the money in ways that will directly benefit people
>>here. And address problems long-term.
>
> Oh?

Yes.
>
> NASA doesn't need people who are less-than-engineering qualified...?!?!

Not really. They need highly skilled people, mostly. You might check into how much money it costs to create one NASA job.

>If we pump up NASA for a new deep space or lunar program, it means that >every company that contracts with it would be able to

Sure - at a price.

But why not solve our problems directly?
>
>And WHAT problems are NOT being addressed long term BECAUSE of the >space program?

Surface transportation, for one. Energy efficiency and independence. Education.

>>> A bit of government subsidising would promote yet another wave of
>>> technical advencement.
>>
>>Agreed - spent in the right places. That's the principle that drives
>>those "Tax and Spend Democrats!!!"
>>
>>Trips to the Moon and Mars will require a lot more than "a bit of
>>government spending".

>
> But we can also defer that with cooperation with business against futures
>for mining, technology development, etc. The opportunities are there...We
>just need to have the gonads to take them.

What opportunities? The only really profitable parts of the space program have been the Earth-imaging satellites and communications satellites. All unmanned, and they look back at Mother Earth. And the role of satcomms is dwindling with the development of fiber optics.

>>It was in the Nixon/Ford years that the big NASA cutbacks took place.
>>Too much money, they said. There was supposed to be an Apollo 18 lunar
>>mission - it was cut and the Saturn V for it became a museum piece.
>>Literally.
>
>Yep...the public lost interest since there was no "obvious" return on
>thier

What do you think could be harvested from the Moon that can't be had for much less right here on earth?

>>All of NASA's manned budget went into the shuttle, which is a
>>marvelous system with a 1 in 75 chance of complete mission failure.
>>The number of shuttles lost compared to the number of missions flown
>>verifies the reliability analysis.
>
>Things that are filled with hundreds of tons of volatile combustables
>are bound to go boom.

CNG tankers don't. Railroad tank cars don't.

Sorry, 1 in 75 is simply not good enough reliability.
>
>As for your "reliability analysis" try the numbers based on miles
>flown...(Just proof that you can make any set of numbers look good/bad)

Not a valid comparison. In the history of shuttle missions, the result is binary. Either everybody gets back safe and sound from a mission, or everyone dies and the mission is a total loss. Doesn't matter how many miles or flown - the important variable is how many missions are flown. Challenger blew up before going 100 miles of its last mission, Columbia burned up after going all but about 2000 miles of its last mission.

The important fact is that about 1 of 75 missions has been a complete loss.

>>The reason the USA made the big space commitments was because JFK and
>>LBJ (guess what party) pushed for them.
>
>Do you think it would have been different with Nixon in the White House
>in 1960?

Yes. But that's not the point.

>He was an avowed anit-Communist. Do you think he might not ahve made
>the same challenge, faced with the same circumstances...?!?! I bet he would
>have made the challenge earlier than JFK did.

Nope. JFK needed to save face after the Bay of Pigs embarrassment. There was serious talk of scrapping the whole manned program, maybe even all of NASA, after the various problems of exploding rockets and the Popped Cork fiasco, while the Russians were orbiting dogs and taking pictures of the far side of the moon. (The Rooskies had lots of failures too - they just didn't talk about them).

There were more than a few people who thought that the Air Force should do manned space flight. There were plans for followups to the X-15 that would reach orbit at far less cost and complexity than the ballistic-missile spam-in-a-can NASA approach. In fact, the X-15 did reach "space" - it exceeded 62.2 miles altitude.
>
>>They were essentially done to

>it...But being more-or-less half way between FL and CA helped. Much of
>America's space program is out of Edwards and Vandenberg, if you will recall.

The *only* reason was to put high paying jobs in LBJ's home state.

The launch facility is in Florida for physics reasons. The ideal launch location would be on the equator, but the continental US doesn't go that far south. And there should be water or desert to the east of the launch pad so failed launches don't land on people.

The Houston facility could be anywhere there is communications.
>
>>Billions were spent on the space program in the '60s but when
>>Americans needed quality fuel-efficient cars in the '70s they had to
>>go to Germany and Japan for them.
>
>Because American unions demanded wages that pushed the cost of American
>cars through the roof.

That's pure BS.

Union workers built the spacecraft. If we could afford to have them build rockets, we could afford to have them build cars.

>Also, American tastes in automobiles up until then
>were for bigger, heavier and faster..."Small" was not a generally popular
>concept in the 50's and 60's, if you'll recall.

That's because the car companies wanted it that way. Here's why:

After WW2, American car manufacturers thought that the way to maximize profits was simply to sell more and more cars. One way to do that was to have this year's model be bigger, faster, more powerful or simply 'more' than last year's. Safety, economy, and pollution were minor concerns - the important thing was to plant in the public's mind the idea that this year's car was somehow a lot better - and at the same time, keep manufacturing costs down.

So body styles changed every year - sheet metal is cheap. Fundamental research into engine design and such was not a high priority at all. The result was cars that were big, heavy, inefficient, dirty and fell apart or rusted out in a relatively short time.

Most of all, the focus was short-term. Sell more cars next quarter! Where we'd get all the fuel to run them wasn't a concern.

>The Germans and the Japanese were
>forced
>by economics, infrastructure and geography to do "small".

Not really - look at Mercedes. What they did was look at *quality* first. They set out to design cars that were efficient and well built. They improved the

basic technologies, not just the sheet metal.

Ever hear of a guy named Deming? He wound up in Japan because US manufacturers didn't want him.

The USA could have been developing better surface transportation systems in the '50s and '60s and '70s. But we didn't because those things weren't given any priority. That myopia continues today.

Imagine if the commitment had been made back in 1973 for the USA to become energy independent by the end of the 20th century. Do you doubt that it could have been done? Imagine being able to tell OPEC to take a hike.
>

>>completely.
>
> So again...we bring human exploration and technology to a screaming halt
>due to our fear of the cash register?

Nope.

We set out a reasonable budget for manned space flight and do what can be done
with that budget. And we focus more on real-world problems.
>
>And as for the failed Mars missions, do you think that maybe if there
>had been someone there to fix the problem that the mission could have
>proceeded?
>
Nobody knows. Most of the failures were mission-ending. The probe went silent
and was never heard from again.

Heck, even if the Columbia astronauts had known about the problem that caused
the loss of their ship, there was nothing they could have done about it.

>>Heck, figure out radio propagation delay to Mars....
>
> Yep...same 186,000MPS that wew ahve here on Earth...

I mean how much time it takes.

>>What benefits would a manned mission to Mars give that could not be
>>had any other way?

> Having a Human Being actually stand on it, for one.

Besides that.
>
>>And how much all of it would cost?
>
>Who cares?

Those of us who have to pay for it.

>We poor billions into pork barrel projects that DON'T
>provide ANY return every year

Like what? What are you willing to cut in order to fund a Mars mission?

>...why not spend it on something that will...?!?!

Sorry - the ROI of a Mars mission just isn't there.
>
>>> Why not research stations on the Moon?
>>
>>How much are *you* willing to pay for them in tax dollars? That's
>>really the bottom line. People are all for space exploration and such
>>until the bills for it show up.
>
>See above.

You're avoiding the question. How much additional tax are *YOU* willing to pay?

>Imagine what the communications possibilites alone would be
>by using the moon for alternative wireless technologies...

There aren't any. The moon isn't a good platform for such things. In short, it sucks.

Geostationary orbit is the way to do that job.

Ham radio connection: Back in the '70s there was something called "Project Moonray" that was supposed to go on the last Apollo lunar mission. The idea was that a small package would be deployed on the moon to repeat amateur signals the way OSCARs did. Except that by being on the moon, it would be easy to track.

Sounded good at first. But the problems were many. Size and weight were severely limited, and the package had to be rated for manned flight.

But the big problem was that the results were not worth the requirements. For example, the moon is roughly 10 times farther away than geostationary and roughly 100 to 1000 times farther away than low earth orbit. You do the math on what that does to path loss.

Also, the package would be bked by the sun for 2 weeks, then in darkness for 2 weeks. Temperature variations of over 400 degrees.

It didn't happen.
>
>>> Unless you want
>>> to ressurect the "world is flat" or the "we never went to the Moon"
>>> conspiracies, what other legit reasons can you think of to NOT do it?
>>
>>Simple: The costs outweigh the benefits. There are easier, cheaper,
>>faster ways to get the benefits and solve the problems we have on
>>earth.
>
> Oh? They are...?!?!
>
Yes. It's simple: If you want a better mouse trap, study mouse behavior and trap design, and build one. Don't go off building racecars, hoping that some development of race car technology will somehow spill over into mouse trap technology.

>>Space and war may help with some things but they are horribly
>>inefficient means of progress.
>
> So we just wait until a more efficient way is developed?

No. We address the problems directly. On a budget.

>Until they
>develop the "transporter"...?!?! Until Zephraim Cochrane develops warp
>drive?

Those are all fantasies, Steve.

>>None of this means we shouldn't go into space, just that we need to do
>>so in a way that is balanced with other needs and programs.
>
> So we just mark time until...when...?!?!
>
We don't mark time. We make a long term plan and reasonable budget.

Heck, let's fund space exploration the way so many other things are funded. We'll have bake sales and walkathons. Solicit donations of parts and supplies from manufacturers, and use volunteer labor. Sell advertising space on the outside of the space vehicles. Lots of ideas like that in use by groups ranging from Indy 500 racers to the Girl Scouts.

And we'll put real money into education, infrastructure development, transportation, and energy independence.

I know this'll come as a real disappointment to you, "William", but I
don't hang on your every word. I have only so much space available for
mental storage and I like to reserve it for the really important
matters.

> > > Then you guys set upon me like the pack of wild
> > > dogs that you are...
> >
> > Which "you guys" would that be?
>
> PCTA. Know any?

I know several. Are you telling us that everyone who is for morse
testing and who posts here "set upon you like a pack of wild dogs" and
that everyone who is for morse testing and who posts here is a part of a
pack of wild dogs? I don't believe you.

> > > ...telling me of acts of heroism...
> >

The above is a perfect example of why I don't hang on your every word.
It isn't factual and is certainly less than memorable.

> But since those old-timey
> exams and examiners have gone away, all the new hammies are just not
> worthy. Common theme throughout R.R.A.P.

Did you figure out that end-fed antenna yet?

Any amateur radio QSLs Len could produce would be either "out of band"
or would belong to someone else.

> > > Which according to your

You can add the word "amateur" before radio and the meaning is still the same.

> You have substantially changed the subject matter. Previously, the
> subject was a young, unlicensed person wanted to know about Amateur
> Radio. Have it your way.

Actually, you have done so. You have Len suggesting a book. The fact is, Len has no practical experience in amateur radio.

> One can become licensed in amateur radio simply by reading a -single-
> book and taking an exam. Unless you are saying that those PCTA's who
> told me so are liars.

You're quite right. Someone can pass an exam and become a radio amateur. Absent practice and experience, that person can be a complete lid.

> > Practice and experience are the keys.
>
> Of course, now that you've substantially changed the subject.

Not really, Brian. You have Len suggesting a book.

> > Len has neither.

And Before that, a Republican that set the wheels in motion for big
deficit spending. And so on and so on...

Been waiting for you to weigh in on this one Steve.

You are 100 percent correct.

Nothing occurs in a vacuum, and life is a continuum. Democrats make
mistakes, and so do Republicans. As time goes on, the groups don't stand
still. They morph and change until some of the old definitions gert a
little muddy. So called conservatives now stand for big government with
more power, and spend money quite easily.

> conservative!
>
>> Now, was that a "leeberal" mistake?
>
>
> And the last President to have a balanced budget...?!?!

You see Steve, you're trying to put everything into this Republican good/Democrat bad state.

I'm not either. I'm an independent conservative. I vote for Republican candidates around 60 percent of the time. Frankly, both parties piss me off.

But you might ask why I seem to be busting Republican chops a lot. It's because the Pubs have been in power for most of the last 50 years, and increasingly so in the last 20.

And yet, the blame for all the problems is heaped variously on the Democrats, and the elusive "liberal".

I say spend less time blaming, and more time fixing.

But of course that takes us back to what I said earlier about Republicans making mistakes too. Now if they owned up to them. It's a pity - when you never admit a mistake, you won't learn from the ones you do make.

Big Dave not read DoD Directive 4650.2 (eff. 21 Nov 03).

Big Dave not read of Grecial Firebolt.

MARS work fine by itself. Proved. MARS be military
radio service.

>> Hi, hi!
>
>What are you, OSCAR I?

Big Dave be Oscar Hammernail II?

>>
>> What tales?
>
>Read the material, "William".

Read DoD Directive 4650.2, Big Dave. DoD define MARS.

ARRL not define MARS. FCC not define MARS.

Big Dave be outer-spaced again. Needs more O-two.

Temper fry...

Riiiiight. Big Dave be long-time computerist, hardware expert,
yarns and yarns of experience in digital stuff. Knows all, sees all,
can tell ACM to go stuff it. :-)

>> Heil wastes everyone's time. :-)
>
>You aren't everyone and you have nothing but time.

Why Big Dave talk allatime on personalities? :-)

Is this Insult Fest newsgrope or about hum radio policy?

Say goodnight, Dave.

Temper fry...

>>
>> Taking credit for something you didn't so is exactly that, Jim. He lied.
>
>That's NOT "using smoke and mirrors to make things look better than
>they are". It's "the rooster taking credit for the dawn".

He did it the entire time he was in office.

Bill Clinton was a master at manipulation and deceit.

>Two very different things.

Are they? He manipulated people and industries to get what he wanted, or
to at least make it LOOK like he was getting what he wanted.

>> >>Never mind that the NYSE had been on a steady upward trend for the
>> >>previous 12 months.

>
>It's a matter of thinking long-term rather than short-term. Education
>rather than legislation. Gradual changes on a broad front rather than
>narrowly focused quick fixes that ultimately don't work.

MY POINT EXACTLY!

The President's Bush and President Reagan before them cautioned us on
EXACTLY that point...That no "quick fix" was possible, and that any "bandaid"
thrown on the problem would be expensive and marginally effective.

>For example, suppose there were tax incentives to use transit? As in
>getting a tax credit for money spent on transpasses or organized
>carpools?

You'd be preaching to the choir on that one, Jim...I have already
expressed my support for mass transit.

>Ultimately it comes down to asking people what they *really* want,
>what they're willing to pay, and what they're willing to do without.
>That's not an easy task, and the last president to try it was Jimmy
>Carter. That's a big reason folks dislike him so much.

People disliked him so much because he gutted this country's honor. He's
been working hard to make up for it ever since.

>Ronald Reagan pushed the idea that we could have it all and not do
>without anything. But it's just not true.
>
>> No...they get rich getting other people to take in other people's
>> washing...By providing a business infrastructure to do that in.
>
>In the short term. That's the problem.

Getting the people with the money to create opportunities for business is
a "problem", Jim...?!?!

>> >It was "trickle down" Reaganomics. But
>> >eventually the piper had to be paid.
>>
>> Paid?
>
>Yes. The debt eventually has to be paid - or at least the interest on
>it.

And that in and of itself is a multi-billion dollar industry.

>> I was ripped off by the taxes I got zapped with on what should have
>> been a very, very lucrative income.

>
>How were you ripped off? When?

Every Arpil 15th.

>> That debt was due (mostly) to the military build up of the Cold War.
>
>And Reagan's buildup. And "Star Wars".

OK.

So we go back to Eurpoe, put the Iron Curtain back up, push all of those
people back behind it, and re-install the Soviets.

>> We
>> had already started to "harvest" the "peace dividend" by the end of Bush
>Sr's
>> tour.
>

>
>> Also, much of the improvement in the economy at the end of Bush Sr's
>tour
>> was the result of technology advances made in 80's.
>
>Which also put a lot of people out of work.

Technology is STILL putting people out of work, Jim...If we had the most
lucrative economy possible, the use of technology to supplant human resources
will continue to force people out of work.

>The *biggest* factor was that oil prices stabilized and interest rates
>dropped.

Guess we need to depend on the Gold Standard instead of Standard Oil,
eh...?!?!

>> >>>>We don't need Kerry. John Edwards had a chance...he just didn't bark

>> with it, and when she failed, it wasn't "his" fault.
>
>Do you see the current president taking any real blame for *his*
>failures?

Which president sat in the Oval Office and "admitted' any "errors" for
national policy, Jim?

Clinton's only "apologies" were for having got caught in a lie over some
recreational booty.

>> >> The Dem's COULD do better. I would have had to think real hard
>about a
>> >>vote for Edwards. Too bad the loudest dog won rather than the better
>> >>candidate.
>> >
>> >You pay malpractice premiums?
>>
>> As a matter of fact I do.
>
>Why do you think they're so high?

Don't even go there, Jim...

Those "premiums" are high because tort laws, written a looooooooong time
before John Edwards was a factor in politics, allows it to happen.

Furthermore, it's organizations like the Trial Lawyers Association that
lobby long, hard and loud to prevent tort reform.

Lastly, it comes down to juries that are willing to remit large awards
based upon emotion over common sense. Like the jury that awarded a homeless 45
year old man over 5 million dollars because he was drunk and trespassing in the
middle of the night on a closed parking lot, tripped and suffered a broken arm.

YOU tell ME how John Edwards is responsible for that...

>Heck, here in PA some docs and other medical folks are simply shutting
>down or packing up and leaving because medical malpractice insurance
>is simply too expensive. Sure there are some bad docs out there, but a
>lot of it is fueled by a lawsuit system that has nothing to do with
>medical reality.

Absolutely.

And it's a syndrome that's been occuring since long before John Edwards
took ANY office.

>> >>>But you still didn't answer my questions, Steve:
>> >>>
>> >>>When and under what circumstances was Kerry "side-by-side" with Hanoi
>Jane?
>

>>
>>It's too complicated for the politiicans and regulators.
>
> Then educate them.

I tried, Len. They just don't get it. I'm just a poor dumb old amateur anyway.
You've told me time and time again how unqualified I am, how I "live in the
past", how I don't know anything about "big time radio" and such, and how
you're a "professional in radio". I still work regular hours and then some -
I'm not retired like you. I'm not a wordsmith like you. I don't even make up
names to call other people in newsgroups like you. I'm only 50 years old. If
they won't listen to you, why should they listen to me?

My main interests in HF amateur radio are operating Morse code and building ham
radio equipment - either from kits or from my own designs. Three years ago I
bought a kit from a little company in California and built it. Rest of my
projects are what we hams call "homebrew". You've made fun of them so many
times that they must be of no account, right?

>>> BPL will be the demise of low-level-signal HF communications in
>>> urban areas.
>>
>>FCC and NTIA say differently
>
> The FCC has NOT said much technically on Access BPL.

That's different from saying "BPL will be the demise of low-level-signal HF communications in urban areas."

They're the professionals and the regulators and the military, Len. I'm just a poor dumb old amateur anyway. What do I know? Who am I to contradict professionals who know what's best for me?

FCC has said a Morse code test "serves no regulatory purpose". FCC has reduced the requirements for a ham radio license again and again for more than 25 years. The same FCC now refuses to interpret Part 15 the same way I do.
>
> Docket 03-104 asked for input on BPL.

I gave them plenty. I also contributed to the ARRL fund to fight BPL.

> NTIA said "A 10 db increase in background noise is acceptible!!!!"

Does it say "acceptible" or "acceptable", Len? How do you know it isn't acceptable? How much communicating on the HF amateur bands have you done in the past month?
>
>>> Kiss off any thoughts of signal-to-noise ratios
>>> required in modern receivers. All that advanced technology will
>>> go to waste. Hams can go back to using one-tube regenerative
>>> receivers, those being as "low-signal-level" as any other in an

>>
>>Never used a regenerative receiver, have you, Len? That's obvious from your
>>statement. A good one is as sensitive as a modern superhet on HF.
>
> Poor baby. Joining in an attempted gang-bang of an NCTA?

No. I'm just commenting on you lack of receiver knowledge and skill. That's understandable - professionals gave up on regenerative receivers decades ago.
>
> My first receiver, built in 1947, was a regenerative.

Couldn't get it to work, huh? Here's a hint: The tickler coil has to be connected the right way to get the detector to regenerate. Even I know that.

> What did you build in 1947, senior?

Nothing, Len. I wasn't around. I wasn't bootlegging an unlicensed transmitter, either.

But 20 years later, in 1967, I got an amateur radio license. And began to use it. Today it's 57 years later than 1947 and you haven't done any of that. .

Senior? Guess what - yesterday I got an application to join AARP. They want me as a member. So I guess I'm a senior citizen now, huh? Maybe I'll join.

I've built regenerative and superheterodyne receivers. Also transmitters, transceivers, power supplies, antennas, antenna tuners, station control systems, test equipment and much more. Most of it from scratch, some kits. But none of that counts for anything, does it, Len? Homebrewing is "living in the past", according to you, isn't it? We hams all just buy our factory made equipment, right?

> Last regenerative receiver I checked out (for son of friend) was in
> 1968 (give or take). Had an RF stage ahead of detector, too.

Then it wasn't "one tube". was it?

> Had MAYBE 5 uV input "sensitivity" at best (if one squinted their
> ears), was terrible in selectivity, full of intermods from other
> strong signals adjacent.

Poorly designed and built, then. Or maybe you couldn't get that one to work either, huh? Too 'primitive' for you, I suppose.

> Didn't tell friend or son it was that bad,
> made nice-nice, gave only technical figures (they were impressed).

So you lied to a child. That must be the "professional" thing to do, eh? Couldn't you do anything to improve it? You're a "professional in radio".

Here's a hint, Len: It's possible to build a very good regenerative receiver and possible to build a very bad one. And everything in between. A regen that can't hear the noise level is very bad indeed.

> Are you going to make a case FOR widespread Access BPL,
> Rev. Jimmie Who?!?

I don't know anyone by that name. To whom do you refer, Len? It can't be me - Reverends are professionals in religion. I'm just an amateur.

>> Well, Jim, if you want to get THAT specific we were actually crashing
>>RANGER probes into the moon in the early 60's...
>
>Yup - trying to catch up to the Soviets...

And "nothing" we did had ANYthing to do with science, technology or
research...?!?!

You are saying we spent those funds and that effort SOLELY to "catch up
with the Soviets"...?!?!

>> Civil War: Creation of the present ambulance services, advances in
>>trauma
>>medicine, advancement of the railroads and wireline telegraphy. Photography
>>becomes popular.
>
>Bloodiest war in USA's history, fought in large part...(SNIP)

Yes, Jim...I think we all know WHY the war was fought.

HOW did that negate anything I said?

>Ambulance service and trauma medicine yes - because of so many wounded.
>Railroads were well established before 1861. The main "advancement" was the
>standardization of lines in the South when they were rebuilt after beying
>heavily damaged during the war.
>Wire telegraph had pretty much connected the developed world. The
>transatlantic
>cable was in service *before* Fort Sumter.
>Photography was driven by a number of factors, not just the war.

So...you are telling me that NONE of the advancements and improvements
occured asa a result of the war.

OK. If you say so.

>> World War 1: The airplane was just a motor driven kite in 1914, and is
>>ready to span the Atlantic in 1919. The radio comes of age. New advances
>in
>>the treatment of diseases (from the study of sanitation in the trenches).
>
>Chemical warfare advances. Unbalance of offensive and defensive weaponry
>leads
>to enormous death toles in trench warfare. Submarine technology increases
>hazards of sea travel.
>
>Advances in flight and radio technology are logical outcomes of increased
>demand for those technologies.

And the advancement of submarine technology increased our ability to do further marine research in the following years.

Commercial radio for the masses follows developments of new technology during the war.

Commercial aviation blossoms after the war.

>>World War 2: Mass production of antibiotics (developed in the 30's, but
>>not considered a priority until the war), development of RADAR, the jet
>>engine,
>>further advancements in air travel as a result of the development of
>>pressurization. Missle technology emerges. Microwave and X-Ray technology
>>skyrockets.
>

>and effort. Digital electronic computer is developed to improve aiming of
>guns.
>50 million dead, entire countries devastated, permitting massive rebuilding
>and
>modernization efforts postwar. War also facilitates Soviet expansion into
>much
>of Europe.

So what you're telling me is that NONE of the POSITIVE things that came from this era are valid, and that since a lot of bad things DID occur, we should shun the good ones too...?!?!

>> Korea: Use of the helicopter for medical evacuation. Proliferation of
>>the television. Satellite communications.
>
>Satellite communications? Where?

Jim...

We developed new technologies DURING the conflict.

The increased spending and military build-up incidental to the Korean Conflict and the ensuing "Cold War" DID spur on "satellite" communications...Did it not?

>> Viet Nam/Moon Missions: Advancements in microprocessors, additional
>>advancements in trauma care (MAST pants, use of helicopters in civilian
>>MEDEVAC, previously considered too expensive due to limitied manufacture of
>>helos) IR/NVG technology.
>
>Microprocessors first appeared in the early 1970s - developed for civilian
>applications.

Applicaitons that were incidental to military spending and research.

>> SDI/Cold War: Space imaging, proliferation of LASER devices,
>especially
>>into medical field.
>
>>> In many cases those
>>>"jumps" would have happened anyway, or are the result of massive
>>>investment by governments that would be considered "socialistic" in
>>>peacetime.
>>
>> Oh..."would have happened anyway"...?!?!
>
>Yes. There is a logical progression of most technologies. It's called
>engineering. You don't need a war to do it.

No, you don't.

It's just that we have developed a pattern of spurts of development
coincidental to military spending or conflict. This is a documented fact. It
happens.

>> I don't think so, Jim.
>
>It's true.
>
>>All of the major developments of other
>>technologies or services only happened where there was major subsidies by

>
>Why spend your own money if Uncle will give you some?
>>
>>>In any event the cost far exceeds the benefits.
>>
>> Oh?
>>
>Yes.

You've not proven it, Jim.

We are presently exchanging these comments via a medium that was developed incidental to yet other military programs.

The proliferation of the Internet has driven communication costs to all time lows. Cellular technology, based in part on techniques developed for secure communications for...you-know-who...have put a telephone on the hip of almost every American.

>> How much do you pay for a calculator these days?
>
>Nothing. Last calculator I bought was in the mid 1980s. I use the Windows
>calculator function. Free.

And you paid how much for your Windows program...Or the computer it was installed on when you got it?

I remember simple function calculators costing $40 or more when I was in high school. I can get a decent full function scientific calculator for less than that now.

>> How much did you pay for the last Amateur transceiver you bought?
>
>$589 for the basic Elecraft K2 kit, which I assembled. Also has the ATU and
>audio filter options, which I assembled.

Uh huh.

And how much will that radio do compared to kit radios of only a decade earlier, and at what cost comparison...?!?!?!

>The Southgate Type 7 (completed 1995) was built from recycled parts and cost
>less than $100. The Type 6 (1985) cost a bit more. I've never owned any
>non-US

>made ham gear.
>>
>> Have you ever had an X-Ray or CT scan?
>
>Dental Xrays since I was a kid. Never a CT scan. Had my first up-periscope
>last
>year....

TMI, Jim...Waaaaaaay, waaaaaaaaaay TMI... ! ! !

>>All of those technologies have benefited from government spending in
>>order to advance military or space technology.
>
>Wouldn't it make more sense to just develop the technologies straight out? If
>you need better medical Xray machines, develop them.

You can argue what OUGHT to be as opposed to WHAT IS all day, Jim.

All you'll do is waste time.

>> And most mathematical or engineering calculations were performed with a
>>slide rule or pencil and paper.
>
>The PC was not developed for the space program. Nor for the military.

Who said anything about PC's, Jim?

>And the Saturn V worked pretty good, didn't it?

Yep.

Paid for by...?!?!

In pursuit of...?!?!

>>>No one has been back to the moon in 32 years and there are no serious
>>>plans to do so anytime soon. The technology to do it would almost have
>>>to be reinvented.
>>
>> Why? Did we get stupid in the last 30+ years?
>
>Actually, yes. Much of the manufacturing technology no longer exists. Anyone
>who worked on those systems above a certain level is now retired, or close to
>it.

So...there's NO technology that exisits today that would allow us to land a
man on the moon in say...two years...if we really wanted to...?!?!

>>Quick/Cheap/Dirty plan...A lunar lander configured to ride in the
>>Shuttle bay.
>
>That could work. I had the same idea years ago.
>
>>The Shuttle carries it to the Moon,

>
>Won't work. Shuttle system does not have enough fuel to leave Earth orbit,
>let
>alone enter lunar orbit and leave it again. And that's with the cargo bay
>*empty*.

(sheeeesh)

So we can't configue an auxiliary fuel system?

It will take an extra 30 years to figure out how to install the fuel tanks
necessary to do it?

I'll bet you a nickle to a C-Note that Burt Rutan could rough out a
workable method on a napkin in a Mojave restaurant and have itr working in that
two years.

>If it could be done, NASA would have done it already.

Oh?

Why?

Just because?

They've had to fight Congress and ignorant laymen for 30 years just to
stay in LEO.

>The Shuttle has enough fuel to reach orbits of a few hundred miles but no
>more.
>Going to the moon is a lot more. That's why a Saturn V is so big yet the
>LM/CSM
>combo is so small.

Again, We can't figure out a piggyback fuel tank?

We can't park "re-supply" ships along the way or in lunar orbit?

We've already proven that on-orbit rendevous, docking and EVA construction
is a no-brainer.

So again...WHAT new technology do we ahve to develop to go back to the
Moon?

HARDWARE, yes...we need new machines. but so far, Jim, your "arguments"
have not swayed me that we could do it if we wanted to...

>>the mission drops in, and brings at
>>least part of the lander home for re-use itself.
>
>Only ways such a system could work is if the Shuttle stayed in earth orbit
>and
>the lunar package went from there.

Why?

>And the result would be a short-term visit by a few astronauts, like the
>Apollo
>missions, not a long term base.

As long as you keep thinking that, then that's all we'll do.

If you think in terms of "what can this ONE sortie accomplish", you'd be
right. But that's already been addressed by countless suggestions of what we
COULD do if we wanted to.

>>>> For those who insist that "we need to spend the money here", I ask
>>>WHERE
>>>> in space are you going to spend that money?
>>>
>>>We need to spend the money in ways that will directly benefit people
>>>here. And address problems long-term.
>>
>> Oh?
>
>Yes.
>>
>> NASA doesn't need people who are less-than-engineering qualified...?!?!
>
>Not really. They need highly skilled people, mostly. You might check into how
>much money it costs to create one NASA job.

So...NASA doesn't hire drivers, janitors, security personel, health care
workers, mechanics, etc?

>>If we pump up NASA for a new deep space or lunar program, it means that
>>every
>company that contracts with it would be able to
>
>Sure - at a price.

Sheeesh.

>But why not solve our problems directly?

Sure...Why not.

Let's just go ahead and drop a billion dollars into social welfare
programs to feed and house the poor.

Let's NOT do something to advance our technologies that will create
entirely new classes of jobs, promote our wellness and, hopefully, ultimately
develope technologies that might "liberate" us from poverty.

>>And WHAT problems are NOT being addressed long term BECAUSE of the >space
>program?
>
>Surface transportation, for one. Energy efficiency and independence.
>Education.

Uh huh.

>>>> A bit of government subsidising would promote yet another wave of
>>>> technical advencement.
>>>
>>>Agreed - spent in the right places. That's the principle that drives
>>>those "Tax and Spend Democrats!!!"
>>>
>>>Trips to the Moon and Mars will require a lot more than "a bit of
>>>government spending".
>>
>> But we can also defer that with cooperation with business against futures
>>for mining, technology development, etc. The opportunities are there...We
>>just need to have the gonads to take them.
>
>What opportunities? The only really profitable parts of the space program
>have
>been the Earth-imaging satellites and communications satellites. All
>unmanned,
>and they look back at Mother Earth. And the role of satcomms is dwindling
>with
>the development of fiber optics.

Fiber optics = interruptable infrastructure.

>>>All of NASA's manned budget went into the shuttle, which is a
>>>marvelous system with a 1 in 75 chance of complete mission failure.
>>>The number of shuttles lost compared to the number of missions flown
>>>verifies the reliability analysis.
>>
>>Things that are filled with hundreds of tons of volatile combustables
>>are bound to go boom.
>
>CNG tankers don't. Railroad tank cars don't.

ROTMFFLMMFAO ! ! ! ! ! !

>Sorry, 1 in 75 is simply not good enough reliability.

And we'll improve that reliability by just not doing it anymore...?!?!

>>There's ALWAYS a need for competition, Jim.
>
>Who is there to compete with for space?

The Red Chinese for one. They just flew a manned mission a year or so
ago, and they certainly have the resources and the wherewithall to exploit it.

And considering thier track record for flooding markets with cheap
alternatives that have, quite literally, put hundred of thousands if not
millions of Americans out of work, I don't doubt they can do it there, too.

I'd rather know that bright, fast moving light in the sky was carrying
Americans.

>Heck, let's fund space exploration the way so many other things are funded.
>We'll have bake sales and walkathons. Solicit donations of parts and supplies
>from manufacturers, and use volunteer labor. Sell advertising space on the
>outside of the space vehicles. Lots of ideas like that in use by groups
>ranging from Indy 500 racers to the Girl Scouts.
>
>And we'll put real money into education, infrastructure development,
>transportation, and energy independence.

I don't see a whole lot of likelyhood that anything further will be forthcoming from this exchange, Jim. If you believe that "all that money" is going to no good use and that it's not a benefit in your daily life today, well then there's just no use doing it.

I see the benefits of our space and technology programs every day. And as both an American and as a human with a bit more than average sense of adventure, I'd like to see us reach out beyond our own celestial home and take advantage of the opportunities "out there".

Unfortunatley GETTING there will be neither cheap or without risk, but I for one think the benefits will ultimately be enormous.

Just don't forget that the world's greatest DXer worked out of band
frenchmen on 6 meters, and if he had to do it over again, he would.

The second part is memorable.

> > > > Then you guys set upon me like the pack of wild

If you disagree, you've had years to correct it. But instead, the
PCTA give each other passes all day long. Hell, after six years of
idiotic posts from Bruce, the Rev Jim finally got cornered and had to
agree that Bruce was an idiot and his postings were abusive.

You'd work the out of band Frenchmen if you had to do it over again.

They all became good radio ops by sarting with a book.

Ooops. You forgot to remove the word "amateur" from your statement.

Len has plenty of experience.

>
> You're quite right. Someone can pass an exam and become a radio amateur.
> Absent practice and experience, that person can be a complete lid.

Even the most learned of amateurs may find himself working out of band
Frenchmen on 6 meters. The shame of it is that he could have learned
something from it, but didn't.

> > > Practice and experience are the keys.
> >

Dunno? Did Len read a golfing book?

I wonder why there are so many golfing books written and sold?

Not really true. Although we've had several Republican presidents, most of
the time the House and Senate had a majority of Democrats.

> the time the House and Senate had a majority of Democrats.

Lets go back to 1981 Using the Senate webpages as a reference, the majority leaders are chosen on a two year basis. 7 times there was a Republican Majority leader, and 4 times a Democrat.

There is a small complication from 2001-2003, as a republican switched parties, giving a temporary Democratic majority.

So if you like, you can make that 6.5 to 3.5 ratio

The house of representatives has been solidly Republican since 1995. Before that it was indeed, majority Democrat for a good while. Reference House webpages.

Since 1980, we have had 16 years of Republican Presidents, and 8 years of a Democratic President.

We are looking at a 2:1 ratio of who's in power when. My advice is to use that conservative infallibility, and fix the nation's problems instead of blaming all on the minority.

I could research more, but I think I made my point, and Field day looms. I hope you can participate, and wish you the best with any surgery you may need to have.

> So...
>
> Promoting consumer confidence and spending (witch ultimately drives the
> economy) was wrong?

Promoting the idea that consumption does not have any responsibility
connected to it is wrong.

Promoting the idea that 'consumers' should not be concerned about the
future is wrong.

Promoting consumption that increases our dependence on imported raw
and finished products, upsets the trade balance and funnels enormous
wealth to governments that are hostile to our basic values is wrong.

Until Iraq invaded Kuwait, the USA was a major customer of Iraqi oil. Which funneled billions into SH's hands, and was used by him to build an enormous miitary, live lavishly and enslave his people. Also to repress folks he didn't like, such as Kurds and Iranians. We turned a blind eye to all this horror because the oil was cheap, he bought a lot of US stuff and he opposed the Iranians - whose oil we used to buy until they overthrew *their* Western-installed tyrant.

Buying stuff from a tyrant who then uses the money to do bad things makes you a party to the bad things. That's just wrong.

How much mass transit got built in those years? How much government funded research and investment in energy independence? What tax incentives (particularly for individuals) were created to promote energy efficiency during the Reagan/Bush years?

Here's another little tidbit:

The income tax tables are set up so that married couples pay a penalty compared to nonmarried couples making the same income. It's been that way for as long as I've been paying income taxes.

Back in the 1970s, the Carter Administration got the rules changed so that married folks got at least half of the penalty back. But in the Reagan/Bush years, that repayment was one of the first things eliminated in the "tax simplification".

Those administrations loved the phrase "family values" but when April 15 came around they made it better for your wallet not to be hitched.

Some "family values", huh?

I recall reading about a married couple (two lawyers, IIRC) who would get a divorce each December and get remarried each January. (Your marital status at midnight Dec. 31 is what counts for tax purposes for the entire year. It's not pro-rated). Their tax savings alone paid for all the costs and a nice vacation. IRS finally went after them.

Jim, try this on for size...

Go through your closet.

Flip up the lables.

Then go through most of your consumer electronics, appliances, dushes,
etc.

What percentage say "Made in China"...?!?!

I'd be interested in seeing your cite of where in the rules it says that
Dave, or anyone else for that matter, is responsible for making sure the OTHER
station is operating within his/her nations regulatory requirements.

>> Did you figure out that end-fed antenna yet?
>
>I think you're telling me I'm not worthy. Are you?

Well...are you?

You KNOW my answer.

>> Any amateur radio QSLs Len could produce would be either "out of band"

>
>So you and Len do have something in common. Now maybe you can treat
>each other as human beings.

The question is was DAVE out of band.

So far, nothing he or you has indicated he was.

>> Actually, you have done so. You have Len suggesting a book. The fact
>> is, Len has no practical experience in amateur radio.
>
>Ooops. You forgot to remove the word "amateur" from your statement.
>
>Len has plenty of experience.

Dave was quite accuarate.

Lennie has NO practical experience in AMATEUR Radio.

No one disputes Lennie's "experience" in "radio". I am sure after all the
websites he's cut and pasted from he HAS actually learned SOMETHING about
Amateur Radio too, but as I am sure you know for yourself, that which one
learns in a book as opposed to "how it is" is not always the same.

>> So Len is a good golfer?
>
>Dunno? Did Len read a golfing book?

I for one have no doubt that if Lennie reads a golfing book, he will be quick to let us know just how smart he is about golfing wether he's been on the links or not.

Most likely not, but we'll give him the benefit of the doubt on this one.

Personally, I find golfing no more interesting than providing an adequate length of turf as an alternative runway in an emergency. It also provides me with plenty of professional opportunities since a lot of cardiac arrests are taken off the 9th hole. Usually physicians, bankers and stock brokers.

Now...we await to find out just how much Lennie knows about golfing. I am sure he worked with someone in "the aerospace industry" who played golf and shared enough stories with Lennie so that he could regale us with some reasonably accurate sounding tales.. Maybe he caddy'd some while on that rear-area tour of duty in 1953....

Good troll job, Chris.

" Moreover, these systems will incorporate adaptive interference mitigation capabilities that will effectively remedy any interference that might result to fixed and mobile operations in the High Frequency (HF) band (1.7-80 MHz)."

The "effective remedy" claim reminds me of the meeting I attended years ago before Texas Gulf started its phosphate mining operation in Beaufort County, NC. Everyone was pleased when the company categorically stated that the little fishing creek near their mine would not be affected and would remain "pristine" after their operations began. Yes, I do remember that Texas Gulf liked to use that word "pristine" in describing the results of their wastewater filtration!Within a year of operation, they had destroyed all fishing in the little fishing tributary to Pamlico sound, and soon they were destroying even the commercial fishing in the sound itself. But by then, Beaufort County had become dependent on their business, so little was done about it. "Abatement" and "adaptive interference mitigation" has the very same ring as the empty promise to maintain the purity of our nice fishing stream. But we sure would like to believe you Chris; trouble is, existing tests have already proven it's a lie. The mitigation just won't work. It's just a radio communications vs. big-business backed misuse of the power lines for profit option. And the truth is, the vast majority of people in this country don't need it and won't use it. A very bad trade-off; only the greedy could love it.

Amateur Radio Newsline™ Report 1402 June 25, 2004

The following is an advisory and not necessarily for air. Ladies and gentlemen, Amateur Radio Newslines' Support Fund Administrator, Andy Jarema, N6TCQ:

--

This is Andy Jarema, N6TCQ, Newsline Support Fund Administrator, getting caught up with our supporters. In the month of September of last year we heard from Benton Bonney, W4PE of Orlando; monthly contributor Joseph Bartzi, Jr., KC8DKF of Columbus, OH; the St. Charles, MO ARC, WB0HSI; monthly contributor William Walters, WA2IBM, of San Jose; monthly contributor Scott Hensley of the Area Communications Team, also in San Jose and the Anchorage ARC.

Of special mention was support received in memory of the late Roy Neal, K6DUE, by the Brackett family of Cerritos, CA. Our thanks to Sharyn, Jim, KE6FVN, David, KE6OPK, and Lynn, WA6HBS.

Thank you to everyone, and we promise to do our best to continue to earn your care and support. A reminder that Newsline is a 501c 3 California non-profit corporation. FCC regulations prohibit us from telling you exactly how to support us, but that information is on our website at www.arnewsline.org. That address will be repeated at the end of the newscast.

I'm Andy Jarema, N6TCQ.

--

Thank you Andy. Now, Amateur Radio Newsline report number 1402 with a release date of Friday, June 25 2004 to follow in 5-4-3-2-1.

The following is a Q-S-T. Changes coming to ham radio in New Zealand and maybe to the 40 meter band here in the United States. Find out the details on Amateur Radio Newsline report number 1402 coming your way right now.

(Billboard Cart Here)

**

RESTRUCTURING: A NEW HAM RADIO IN ZED-L

Big changes appear to be in store for ham radio in New Zealand. This, as the current licensing system is replaced by one test and one class of ham radio operator. ,Jim Meachen, ZL2BHF, is in Auckland

where its all taking place:

--

Here's the bottom line. Our current New Zealand Amateur Radio licensing system is being renovated. We now have only one class of ham radio license in Zed-L called the General Amateur Radio License. This is just one of many changes coming to ham radio down-under as New Zealand radio amateurs discover the full outcome of their regulatory authority's review of the Amateur Radio service. It's all good!

The changes started on June 17th when a new revised Schedule attached to the Zed-L license came into effect. A Schedule here in New Zealand is kind of like a new set of rules. That's the first step. Other changes will take effect over the next 18 months or more. Many long standing problems are being eliminated and some of the changes are believed to be world firsts. Under the new structure there will be only one grade of Amateur operator license in New Zealand. That's the General Radio License that I mentioned earlier. One license means only one test needs to be administered.

A newly-licensed amateur will have immediate access to all amateur bands below 5 MHz and to all amateur bands above 25 MHz. After getting experience over 3 months and with at least 50 contacts logged, access is then permitted to all amateur radio bands.

All existing Limited Amateur licensees automatically became General Amateur licensees on June 17th irrespective of what is written on their existing licenses. There being only one license grade, callsigns will no longer indicate a class. There is already an established procedure to request a change of callsign if a licensee so wishes.

All amateur bands remain the same but a newly-extended Low Frequency band 130 to 190 kHz is being listed for the first time as an amateur allocation.

The permitted maximum transmitter power output for an amateur station on all bands is 500 watts P-E-P. With only one figure, the maximum power level in New Zealand is now mode-independent.

How about visitors to New Zealand? Touring hams holding a current amateur certificate of competency, authorization, or license issued by another administration, may operate an amateur station in New Zealand under a General User Radio License for visitors. A licensed visitor will be granted similar privileges to a New Zealand resident station for a period not exceeding 90 days. The present country-to-country reciprocal license agreements will disappear in time as more countries directly recognize the licenses issued by other administrations. This will make cross-border travel by radio amateurs a lot easier than it is today.

There are now minimum rules and restrictions for Amateur Radio in New Zealand and the future is positive.

For the Amateur Radio Newsline, I'm Jim Meachen, ZL2BHF, reporting from Auckland.

--

With one license exam, one license grade, and with new and simplified procedures, New Zealand telecommunications regulators say that they have positioned that nations Amateur Radio Service for an exciting future. (ARNewsline(tm), ZL2BHF, Q-News)

**

RESTRUCTURING: FCC RELEASES NPRM ON 40-METER CHANGES

The FCC says pending changes in the 40-meter amateur band as a result of the 2003 World Radiocommunication Conference will improve spectrum efficiency. It said so in a rule making notice dealing with the 40 meter band. Norm Seeley, KI7UP, has the latest:

--

The ARRL Letter reports that this remark came in an FCC Notice of Proposed Rule Making in ET Docket 04-139. This is an inquiry that seeks public comments on proposed rule changes to complete domestic implementation of various World Radiocommunication Conference allocation decisions made in 2003. Among them the future of the Amateur Service 40 meter allocation.

The regulatory agency says that it anticipates that administrations in I-T-U Regions 1 and 3 will, in the near future, authorize phone emissions in the 7 point 150 to 7 point 200 MHz band segment. The FCC notes that the ARRL has requested that the United States frequency segment for phone emissions be expanded to 7 point 125 to 7 point 300 MHz. The FCC says that authorizing voice operations in this band segment would permit same-frequency US-to-DX contacts, resulting in increased spectrum efficiency.

The N-P-R-M also addresses the deployment of Earth Exploration Satellite Service-Active spacecraft in the 70-cm band. The Commission says that this operation should not cause harmful interference to, nor claim protection from, any other services allocated in the band in the United States. This includes the Amateur Satellite service as well as any others.

For the Amateur Radio Newsline, Norm Seeley, KI7UP, in Scottsdale, Arizona.

--

Comments in the proceeding are due July 16, with reply by August 2. Interested parties may view the entire NPRM, file comments and view comments filed in ET Docket 04-139 via the FCC's Electronic Comment

Filing System at www.fcc.gov/cgb/ecfs/ (ARRL)

**

RESTRUCTURING: NO VANITY CALLS IN THE UK RIGHT NOW

Vanity callsigns 'are unlikely to be introduced in the United Kingdom before March of 2006. This, according to the Radio Society of Great Britain which says that for the last three years it has been in discussion with licensing authorities over the introduction of such a program for U-K amateurs.

The latest word is that telecommunications regulators have informed the RSGB that due to software issues it is unlikely that vanity callsigns can be introduced before March 2006. In other words, the waiting goes on. (RSGB)

**

More news in a moment, but right now its time for you to identify your station. Linda Reader, N-7-H-V-F, if you please: "From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the W7FP repeater serving Salt Lake City, Utah."

THE BPL FIGHT: ARRL JOINS IOWA HAM IN BPL INTERFERENCE STRUGGLE

The ARRL has joined in the fight on behalf of Iowa amateur and ARRL member. This, following complaints from Jim Spencer, W0SR, of Cedar Rapids, that he has suffered severe Broadband Over Powerline interference for more than two months.

According to the ARRL Letter, a formal complaint to FCC Enforcement Bureau Chief David H. Solomon calls on the Commission to order Alliant Energy's B-P-L field trial system to shut down. It also demands that the agency fine the utility $10,000 for violating the Communications Act of 1934 and FCC's Part 15 rules.

Alleging that the ongoing interference is both harmful and willful to one or more licensed radio station the ARRL asked Solomon to intervene on an emergency basis. ARRL Chief Executive Officer David Sumner, K1ZZ, who signed the letter of complaint, said Alliant Energy has been aware since March 30th. Thats the date it installed Amperion BPL equipment in Spencer's neighborhood and the interference began. (ARRL)

**

ENFORCEMENT: EX-KG6IRO FINED $10000 FOR UNLICENSED OPERATION

A man who challenged the FCC and the southern California ham radio community has been fined $10,000. Amateur Radio Newsline's Bruce Tennant, K6PZW, has the latest on a person who the F-C-C has told to stay off the air:

--

The FCC has issued a $10,000 Notice of Apparent Liability to Monetary Forfeiture -- that's a fancy way of saying a fine -- to Jack Gerritsen, the at least temporarily former KG6IRO. This, for operating a radio station in the Amateur Radio Service without the authorization from the FCC to do so.

In a June 15th letter to the Bell, California, former licensee, the regulatory agency notes his past record of non compliance with, among other things, its orders to keep off the air. It also notes his previous conviction for interfering with police radio communications in 2000 and the November 14, 2001 decision by the FCC to set aside his ham radio ticket based on complaints about the operation of his stations. Kit also raises questions regarding his qualifications to be a Commission licensee in light of his 1999 arrest and 2000 conviction on the police radio jamming charges.

At the time of the license set aside Gerritsen was warned that he has no authority to operate radio transmitting equipment. That doing so would be considered to be a violation of Section 301 of the Communications Act and could subject him to monetary penalties or imprisonment.

But on December 9th 2001, the Bell, California Police Department notified the FCC that it had received complaints against Gerritsen for making radio transmissions. On December 28th of 2001 the FCC's Los Angeles Office issued a warning letter to Gerritsen for unlicensed operation, and basically told him to get off the air. On January 2, 2002 Gerritsen replied and asserted that the set aide of his license was improper. On January 29th, the Bell Police and the California Highway Patrol arrested Gerritsen on a probation violation charge. On May 7th of 2002 he was found guilty of the parole violation and sentenced.

Soon after his release on July 28th of 2003 the FCC began getting complaints of unauthorized transmissions over local Los Angeles area amateur, business band and public safety repeaters. The complaints alleged that the person making the transmissions identified using the call letters KG6IRO. An investigation was launched. This lead to an agent positively identifying Gerritsen on November 6, 2003 as a person holding a transceiver while the investigator recorded the radio transmissions he was making. The investigation continued with the FCC identifying Gerritsen as the interference source on November 7th 2003 and on February 9th of this year.

Now, based on what the FCC cites as conclusive evidence it has levied the $10,000 fine against Gerritsen for willful and repeated

violations of Section 301. As usual, Gerritsen was given the customary 30 days to pay up or to file an appeal.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

Word is that Gerritsen has responded to the FCC with a demand that the agency rescind the fine. He reportedly claims that his license granted on November 14th 2001 has not been terminated, revoked or in any way modified to prevent him from being on the air. (FCC)

**

ENFORCEMENT: THE FCC ENFORCEMENT LOG

Gerritsen is not the only ham radio enforcement story making news this week. With more, heres the FCC's Daryl Duckworth, NN0W:

--

DO NOT READ: Audio report only. Hear it in the newscast at www.arnewsline.org

--

More ham radio enforcement news in upcoming Amateur Radio Newsline reports.

--

ENFORCEMENT VICTORVILLE CA PIRATE STILL ON THE AIR

A pirate broadcaster in Victorville, California, is still operating full time on AM 660 and FM 91.3. This, in defiance of FCC actions to shut it down.

Back on March 31st, the FCC issued a $20,000 fine to alleged station owner Stanley Mark Mayo. This, for willful and repeated violation of Section 301 of the Act for operating radio transmitting equipment without the required Commission authorization.

None the less, the stations remain on the air leading to speculation that another level of enforcement action might be taken. One that could lead to seizure of the broadcast equipment and jailing of those who put the stations on the air.

For a look at the Commission's action on these stations, see www.fcc.gov/eb/FieldNotices/2003/DOC-246123A1.html (CGC, others)

**

RESCUE RADIO: A 100 WATT TRAVELERS INFORMATION STATION AT LAX

The FCC has granted a request by the managers of Los Angeles International Airport for a ten fold power increase to their Travelers Radio Information Radio service. On December 4, 2002, managers filed the application that asked to increase power from 10 to 100 watts. The reason for the increase was to facilitate the airport's efforts to provide emergency communications to the traveling public in the event of a terrorist attack. The FCC has now granted the 100 watt request, due, it says, to the circumstances involved. More on this story is on-line http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-03-3843A1.doc (CGC)

**

THE SOCIAL SCENE: NEBRASKA IN JULY

Turning to the ham radio social scene, Nerbraska's Pioneer Amateur Radio Club will hold its flea market on Sunday, June 11th. The venue is the St. Charles Parish Center in North Bend. For more information e-mail mehaffey@dtnsped.net (E-mail)

**

THE SOCIAL SCENE: MARYLAND IN JULY

And the BRATS Hamfest and Computer Fest will take place July 25th at the Timonium Fairgrounds in Timonium, Maryland. This is one of the biggies that features more than 500 outdoor flea market spaces, hundreds of indoor vendors, free ham radio exams and much more. There is lots of information on this one on-line. You will find it in cyberspace at www.bratsatv.org (Press release)

**

HAM RADIO AND THE 2004 OLYMPICS: THE ATHENS 2004 AWARD

Athens 2004 Olympic Games Awards will available for all radio amateurs and short-wave listeners who make or log a requisite number of contacts with stations in Greece. This, during the period of the 15th of May until the 30th of September.

Special prefixes J4, SX and SY count 10 points each, normal SV stations count 5 points each and the Radio Amateur Association of Greece's HQ station SZ1SV counts 50 points. A total of 250 points is required for the Bronze Award, 350 for the Silver and 500 points for the Gold Award.

The address for applications is RAAG Award Manager, PO Box 3564, 102 10 Athens, Greece, or see the RAAG web site: www.araag.org/award2004.html (RSGB)

AN ARNEWSLINE FOLLOW-UP: MILITARY APPRECIATION DAY

A follow-up to a story we ran several weeks ago. Thanks to the efforts of several amateur radio operators in Ft. Wayne, Indiana a message of hope and appreciation was sent via the airwaves to our military personnel around the world. Newsline's Jack Parker W8ISH has the details:

It's official. By proclamation, May 29th, is officially Amateur Radio Military Appreciation Day in Fort Wayne, Indiana. The event was organized to honor and show appreciation to those that serve and have served in the military and related auxiliary groups. Planning for the event started last spring and quickly grew into a nationwide effort as organizer Emery McClendon KB9IBW spread the word to amateurs and MARS operators in the US and around the world.

The key to success centered on what Amateur Radio could do to let our Military members know that people supported them. Unlike written letters, amateur radio allowed Americans, in their own voice and words, tell the troops how much they care.

To get lots of public input, event organizers searched for a special event location. The Fort Wayne Wizards baseball team got into the game by offering up a spot at their stadium and a home game crowd. The effort grew momentum when radio volunteers from three Allen county amateur radio groups joined the ranks to spread the good word.

The amateurs ran three Echolink stations, IRLP, and two HF stations along with PSK31. The event scored local media coverage from newspapers, radio and network TV stations. Indiana Governor Joe Kernan, a former Vietnam POW and Indiana's senior Senator Dick Lugar both sent proclamations. They were just two of several proclamations read in a special ceremony before the first pitch of the baseball game. Many of the 65-hundred fans on hand, took advantage of the amateur radio connection to express their support to the military stationed around the world.

Reporting for Amateur Radio Newsline, this is Jack Parker W8ISH

--

The Fort Wayne hams say their mission was a success. They now plan to make Amateur Radio Military Appreciation Day an annual event. (ARNewsline(tm), KB9IBW)

HAM RADIO ON THE INTERNET: THE AOL RADIO COMMUNICATIONS FORUM

If you use America Online to get your e-mail and have never explored the Radio Communications forum pages, then you are missing half the fun. Almost since the day AoL took to Internet, the Radio Communications Forum has been a part of the service, and its not just limited to ham radio operators either. No matter what you radio hobby interest, there is probably a board for you. C-B. Scanners. You name it. There's a place for you.

So the next time you sign on and hear the famous words -- "you've got mail" -- type in the keywords radio communications and join the other radio hobbyists around the world who make this area of AoL their cyberspace home." (ARNewsline(tm))

**

HAM RADIO IN SPACE: AN ORBITAL FIELD DAY

Ham radio space travelers Mike Fincke, KE5AIT, and Gennady Padalka, RN3DT, may participate in Field Day from the International Space Station if time permits. ISS Ham Radio Project Engineer Ken Ransom, N5VHO, sent Field Day operating instructions and pass times to the ISS support team at Johnson Space Center. If they were on, Fincke should have been operating as NA1SS. Padalka would likely have signed RS0ISS. Both stations would be classified as 1 Alpha operations. (ARISS)

**

HAM RADIO IN SPACE: ITS A GIRL

And less we forget, a word of congratulations to Astronaut Mike Fincke and his wife Renita on the birth of their second child. Tarali Fincke was born on Friday June 18th with KE5AIT himself making the announcement from the orbiting I-S-S. (N1ORC)

**

THE EDUCATION FILE: THE 2004 TAPR - ARRL DCC

On the educational agenda, the 2004 TAPR and ARRL Digital Communications Conference will be held September 10th to the 12. The venue is the Airport Holiday Inn in Des Moines, Iowa and the planners say that are now accepting papers for the conference proceedings. You do not have to be present at the conference to have your paper included in the proceedings.

Submissions are due before August 10th. Send them to Maty Weinberg at ARRL Headquarters, 225 Main Street, Newington, Connercticut. The zipcode is 06111 and you will find more conference information on the web at www.tapr.org/dcc (TAPR)

**

WORLDBEAT - INDIA: A NEW HAM RADIO INITIATIVE

In world news. India's national Amateur Radio society says that it plans to conduct various programs to promote Amateur Radio as part of a disaster mitigation program in many venues across that country. Many local radio amateurs and clubs across India plan to back this National Institute of Amateur Radio initiative and also take part in this program. (NIAR via Q-NEWS)

**

WORLDBEAT - SCOTLAND: RSGB DISTRICT NAME CHANGES

And some major changes to the two Radio Society of Great Britain Scottish Regions have been announced. Region 1, previously known as Scotland West and the Western Isles, becomes Scotland South and the Western Isles Region 2, previously known as Scotland East and the Highlands becomes Scotland North and the Northern Isles.

As a result of these changes, two new RSGB districts will be added to Region 1. These are District 15 to be called Lothians and District 16, the Borders. The Deputy Regional Manager for District 15 is Dave Stockton, GM4ZNX. (GB2RS)

**

DX

In D-X, word that IZ3EFL is currently active as S79DF from the Seychelles. Look for him during his evening hours on 20 meters SSB. He expects to remain there for quite some time so QSL as directed on the air. (GB2RS)

And PA5M is now in Sudan and will be active in his spare time as ST2DX. He will be there for about one month. QSL is via PA7FM. (GB2RS)

**

THAT FINAL ITEM: D-DAY AND HAM RADIO - NEW ORLEANS STYLE

And finally this week, the story of ham radio helping to celebrate a national holiday, southern style. It took place in New Orleans and Don Wilbanks, AE5DW, is there with the rest of the story:

--

The weekend of June 5th and 6th the Jefferson Amateur Radio Club, based in Metairie, Louisiana operated W5D, a special event station to commemorate the 60th anniversary of the D-Day invasion at the National D-Day Museum located in downtown New Orleans.

Event co-chairman Keith Barnes, W5KB reports that by all measures it was a rousing success. Just over 600 contacts were made and the station display was very well received by visitors and Veterans alike. The hams manning the booth didn't miss many opportunities to

talk up amateur radio.

The display, prominently located in the main entrance hall just past the front door, featured a large collection of World War II vintage military radio gear. Among the visitors to the station were former New Orleans Archbishop Philip Hannan, himself a World War II vet and member of the 82nd Airborne. The Archbishop actually jumped with the 82nd on D-Day.

Also stopping by was Louisiana governor Kathleen Babineaux Blanco. She even sat at the radio and made a contact.

Both Archbishop Hannan and Governor Blanco signed the commemorative poster along with World War II veteran radio operators and World War II veteran hams. The poster will be made into the commemorative certificate for those stations making contact with W5D.

For more information on the special event, along with pictures of the station and vintage radio display, take your web browser to the Jefferson Amateur Radio Club's website at www.w5gad.org. To find out more about the National D-Day Museum visit www.ddaymuseum.org.

From New Orleans, I'm Don Wilbanks, AE5DW for the Amateur Radio Newsline.

That was one of the most curious things I can remember in politics. At
the time, I was just out of school, so I didn't think much one way or
the other. But the results got my attention. The next deveral years were
just about impossible for me to get a job. 18 years old and single made
me almost unenployable for the next several years. The jobs that were
available were going to people with families, vets, etc I was on the
bottom of the list.

Since you said 50 years (see your comment above), you ought to do your
calculation back to 1954.

>
> There is a small complication from 2001-2003, as a republican switched

> House webpages.
>

Since all budget bills must originate in the House, that put the Democrats
in a powerful position for a long time regardless of what party the
President or even the Senate leader belonged to. The Dems had control of
the House for decades.

"Golden Rule: He who has the gold makes the rules."

Actually it's necessary to have parties with opposing views as it keeps
either one from going overboard in their approach.

>
> Since 1980, we have had 16 years of Republican Presidents, and 8 years
> of a Democratic President.

Again since you said 50 years, you ought to take it back to 1954.

>
> We are looking at a 2:1 ratio of who's in power when. My advice is to
> use that conservative infallibility, and fix the nation's problems

The party in power always blames the other party. That's par for the
course.

> I could research more, but I think I made my point, and Field day
> looms. I hope you can participate, and wish you the best with any
> surgery you may need to have.
>
>

Who's in power is often not as clear as we would like to fool ourselves into
believing. If the President is one party and either house of Congress is
the other, who is really in control? Neither can get much done unless the
other cooperates with them. During the Reagan and Bush Sr. years, the House
was controlled by the Democrats. While Reagan was fairly successufl in
working with the Democrats to get things done, Bush Sr. was not. One could
not really say that either party was "in control." Our government, with
it's division of power, was designed to prevent hasty actions on the part of
the government.

Yup should make Field Day if I feel up to it. Right now I am planning to go
but can't help with the setup. Surgery is scheduled for July 7th.

Dee D. Flint, N8UZE

It is because of your forgetfulness that there is very little to talk
about with you.

> > Radio amateurs are free
> > > to seek out information about the "larger world of radio" in any number

Let me check my documentation.

Yes, I read it.

> > You ought to take it up with Steve as he refuses to seek out
> > information about the "larger world of radio," specifically MARS in
> > which he claims to be a participant.

>
> Do you actually read any of the material before posting a reply?

Let me check my notes.

Yes, I actually read the material.

> "Free to" does not equate to "forced to".

There you go trying to change the subject matter again. It never was
about "forced to." Steve does not avail himself to the facts. He
continually spouts false statements. He will continue to do so until
he freely avails himself to factual information, which Len has nicely
provided a clickable link for his use. It couldn't be simpler. So,
Len does wish more ignorant amateurs would freely seek out information
about the "larger world of radio." It would certainly save the rest
of a lot of trouble.

> > > Many radio amateurs have been or are participants in the

The program would exist with no volunteers whatsoever.

If DoD not allowed non-NTIA communication, why dey got cell phone on lip?

If "Sorry Hans, MARS >>>IS<<< Amateur Radio," then NTIA is FCC.

So what the problem?

Hi, hi.

I still work regular hours and then some - >I'm not retired like you. I'm not a wordsmith like you. I don't even make up >names to call other people in newsgroups like you. I'm only 50 years old. If >they won't listen to you, why should they listen to me?

Poor Jimmie. Got inferiority complex. Tsk.

Cannot help Jimmie. Jimmie gots to learn, use the force.

Jimmie not get told he unqualified. Jimmie morseman,
superior to all radio of 1930s. Jimmie do good but still
gots great depression.

Jimmie see nursie, get meds from Dr. Killgore. Will help.
Lose depression, learn hollering and yelling. Keeps nursie
going, keeps Heil going.

BPL make more depress for Jimmie. Not good. Boo hoo.

Temper fry...

>station is operating within his/her nations regulatory requirements.

Irrelevant. Nursie get "cite" will disagree, no matter what.

Nursie not play well with "cites." :-)

>>> Did you figure out that end-fed antenna yet?
>>
>>I think you're telling me I'm not worthy. Are you?
>
> Well...are you?

Nursie know antenna theory? Nursie learn in nursie school,
get fancy certificate with elaborate border (suitable for
framing?).

Nursie know which way Vector is Poynting? :-)

> You KNOW my answer.

Nursie answer: Garbage-mouth reply, insulting person.

Nursie know squat about theory. Can only squat.

>>> Any amateur radio QSLs Len could produce would be either "out of band"
>>> or would belong to someone else.
>>
>>So you and Len do have something in common. Now maybe you can treat
>>each other as human beings.
>
> The question is was DAVE out of band.

Heil out of reality. Heil have godlike powers, never wrong.

> So far, nothing he or you has indicated he was.

Irrelevant. Godlike creatures no need to explain anything,
always right, always superior to inferior beings.

>>> Actually, you have done so. You have Len suggesting a book. The fact
>>> is, Len has no practical experience in amateur radio.
>>
>>Ooops. You forgot to remove the word "amateur" from your statement.
>>
>>Len has plenty of experience.
>
> Dave was quite accuarate.

Heil is everything but always right. Even when "accuarate"
(whatever that is...).

> Lennie has NO practical experience in AMATEUR Radio.

Nursie astound all with obviousness...of obtuseness.

Nursie godlike being also, always right, never wrong, can
insult "inferior beings" at whim. His whim always hanging
out in here.

> No one disputes Lennie's "experience" in "radio". I am sure after all
the
>websites he's cut and pasted from he HAS actually learned SOMETHING about
>Amateur Radio too, but as I am sure you know for yourself, that which one
>learns in a book as opposed to "how it is" is not always the same.

Nursie say Hum Radio allatime different other radio.

Nursie godlike, never wrong...can direct, correct DoD.

Nursie write own book, "Book of Facts!" Book not
available outside of nursieland.

>>> So Len is a good golfer?
>>
>>Dunno? Did Len read a golfing book?
>
> I for one have no doubt that if Lennie reads a golfing book, he will be

>
>They all became good radio ops by sarting with a book.

Impossible in Heil fantasyland.

All who are "interested" in radio MUST get ham license.
Cannot be "interested" in radio without that license in Heil
fantasyland.

>> > You have substantially changed the subject matter. Previously, the
>> > subject was a young, unlicensed person wanted to know about Amateur
>> > Radio. Have it your way.
>>

>
>Ooops. You forgot to remove the word "amateur" from your statement.

Heil never make mistake. Heil godlike, always right.

When Heil make actual mistake, is merely "clarification"
for the inferior. :-)

>Len has plenty of experience.

Not at all in Heil fantasyland. Heil issue orders.

All "interested" in radio MUST get amateur license.

No amateur license, not "interested' in radio, be inferior,
unworthy, beneath royal burple of godlike nobility. So
be it in Heil fantasyland.

>> > One can become licensed in amateur radio simply by reading a -single-
>> > book and taking an exam. Unless you are saying that those PCTA's who

>>
>> So Len is a good golfer?
>
>Dunno? Did Len read a golfing book?

Len play golf. Gave up. Had to pay Heil greens fee.

Heil green that others have bigger outside-of-hum-radio
experience. Big greens fee!

Heil are hole in one.

>I wonder why there are so many golfing books written and sold?

[golf world will sell anything not nailed down...:-)]

>> > > > You guys play both ends against the middle, and now that you've

Poor nursie. Still thinking ham radio works DIFFERENT than all other radio. According to nursie, ham radio have "special" operating techniques, ability to "tune a signal so very carefully" and lots of other bullshit.

Poor nursie will come unglued at what he thinks is a "profane word" like bullshit. Must be sissy marine no longer on any active duty.

> Speaking of which...
>
> You created this "newsgroup messaging points" farce, yet have never
>availed us with the scoring system.

What "farce?" Nursie statements? THAT be a farce!

Nursie badly need to talk to DoD on MARS, get straight.

> What's up with that?

Yes, WHY doesn't nursie agree with DoD? Should...

> That was a rhetorical question, by the way...WE all know you are deeply
>"into" not finishing ANYthing...

? Nursie go nuts again. Imagine things.

> Maybe that's why there were never any Mini-Lennie's for you to nurture
and

Oh, bullshit, nursie. Heil has been called both "Oberst" and, for those who are 'with it' and can associate things "herr robust" for his steadfast imitation of an SS colonel lecturing the troops. A rather bad imitation of Otto Preminger in the film "Stalag 17."

The only "promoting" Heil has done is a reverse form. That of knocking down (actually trying to do so) those he considers "inferiors." That has been consistent for years. Heil, like yourself, just can't play well with a diverse group of people.

Seig Heil...

Temper fry...

What amazes me is how willingly (and some enthusiastically) we approach
this "brave new world".

The shift of the US to a "you want fries with that" economy is perhaps
the scariest thing I've ever heard of.

Lessee, when the US is busy doing whatever it is shifting it's economy
to, and the rest of the world is *making* things, especially One Real
Big part of the rest of the world, (namely China) guess who is gonna be
the boss? Countries with service economies aren't the leaders, they are
ruled by others.

So why do you go to hamfests? Oh, you must be one of them.

And their statement, "armchair amateurs that still use vacuum tube transmitters" shows their stupidy and ignorance. First, only a very small percentage of amateurs use vaccum tube transmitters, and second, it what does that have to do with the problem of BPL interference, which does exists even if the idiots at UPLC says it dosen't. As far as the FCC chairman, he wouldn't know a transistor from a doorknob and is probably just waiting for BPL to get rolling so he and other top FCC officials can move on to cushy, high paying, do nothing jobs in the BPL industry as payback for pushing this crap down our throats.

Steve has the top amateur radio license one can obtain. If I'd get the
book for anyone, you'd be a good candidate. After all, after several
decades of declared interest, you've still not managed to come up with
an amateur license, sport.

> "inferiors."

One of your problems is that you can't stand to be considered a beginner in anything. Any way you slice it, if you, through an enormous fluke, would ever pass an amateur radio exam, you'd become an amateur radio neophyte.

> That has been consistent for years. Heil, like
> yourself, just can't play well with a diverse group of people.

You're certainly a diverse group of people, Leonid.

You haunt an amateur radio newsgroup and expound on your peculiar ideas
about how best to regulate something in which you are not involved and
you think I live in a fantasyland? That's rich, Foghorn.

> >Len has plenty of experience.
>
> Not at all in Heil fantasyland. Heil issue orders.

You believe that any comment becomes a "demand" or an "order. Which of
us lives in a fantasyland?

> All "interested" in radio MUST get amateur license.

I've written "interested in amateur radio" on numerous occasions. You
conveniently make the same error over and over and over.

> No amateur license, not "interested' in radio, be inferior,
> unworthy, beneath royal burple of godlike nobility. So
> be it in Heil fantasyland.

No amateur license. Not interest enough in amateur radio to even
attempt an exam. You have no need to write of unworthiness, royal
anything or godlike nobility. You're simply irrelevant to amateur

radio.

> Heil infuriated that book "Ham Radio for Dummies" exists?

Am I? I think it would make the perfect gift for a fellow like
yourself.
I already have an amateur radio license.

> tsk, tsk. Demeans his Royal Court. Makes him jester.
>
> That bad.
>

Yeah...What's up with that?

One post he's decrying you as a god.

Then't you're "god-like".

Then "you're not an amateur radio god".

>> Expect another Sermon on the Antenna Mount from Jimmie,
>> soon after Field Day (in the park).
>
>Does this mean that the California Halfwatt won't be a Field Day
>participant? Most FD groups welcome visitors. You may even get an ARRL
>pamphlet, Leonard.

"Halfwatt" is good...as in the maximum allowable power for an FRS device.

Of course we COULD allow him the benefit of the MAXIMUM allowable power
that he can presently run...FIVE watts. I am sure Lennie can find any of his
"I am an engineer but I refuse to get an Amateur License because of the code
test" cronies on 11 meters.

>> EVERYONE not agreeing with Heil be "not worthy!"
>
>Not at all, Leonard, but you don't seem to be able to come up with that
>"Extra right out of the box" and Number One Son can't seem to figure out

Getting close to four years...If I had a box of cereal sitting here open
that long you cold play tiddly-winks with them...Or they'd be powder.

>> Heh heh heh. Ordinary mortals cannot get along with radio
>> gods...must all be subservient to godlike creatures doing bad

>> imitations of Otto Preminger.
>
>Am I radio god or not? Your earlier posts on the subject reveal some
>indecision on your part. Meanwhile, feel free to continue your
>pretend-radio-amateur game.

Actually Otto Preminger is JUST who I think of when I think of Lennie.
And the Otto that makes me think of him MOST is when he is playing the
Kommandant in "Stalag 17", getting dressed to talk to "Herr General", clicking
his heels at the orders and thinking he has Lt Dunbar by the nads...

Of course it doesn't turn out that way...

It never does for people like Lennie....

>> Not good to pin Heil to mat so many times.
>
>Pipsquawk's record on his attempts is even worse than yours.

What's really funny is Lennie thinking he's even in a ring!

Funny to see Lennie making suggestions of "pin(ning) Heil to the mat",
when it's Lennie who has, in just the last few days, amdae so many attempts to
"diss" me by alledging that all >>I<< want to do is "fight".

It's another one of those "I hope nobody notices" things.

Problem is, like the King With New Clothes", EVERYONE notices.

>> >They all became good radio ops by sarting with a book.
>>

>
>You haunt an amateur radio newsgroup and expound on your peculiar ideas
>about how best to regulate something in which you are not involved and
>you think I live in a fantasyland? That's rich, Foghorn.

But of COURSE, Dave! EVERYONE except Lennie is "nuts" or "lives in a
fantasyland" when thier views don't coincide with The Great Professional".

>> No amateur license, not "interested' in radio, be inferior,
>> unworthy, beneath royal burple of godlike nobility. So
>> be it in Heil fantasyland.
>
>No amateur license. Not interest enough in amateur radio to even
>attempt an exam. You have no need to write of unworthiness, royal
>anything or godlike nobility. You're simply irrelevant to amateur
>radio.

Uhhhhh.....I woulnd't quite say "irrelevant", Dave...

Lennie is the benchmark against which I personally grade "cheat", "liar", "antagonist", and "incompetent".

>> Heil infuriated that book "Ham Radio for Dummies" exists?
>
>Am I? I think it would make the perfect gift for a fellow like
>yourself.
>I already have an amateur radio license.

And mention in every Amateur Radio publication over the last 10 years or more on more than one occassion.

Lennie's name only appeared in one, and after it did, they went toes-up. What's THAT tell ya...?!?!

>> >Dunno? Did Len read a golfing book?
>>
>> Len play golf. Gave up. Had to pay Heil greens fee.
>
>So you'd have Heil to pay.

I knew we'd get SOME suggestion that he now knows golf.

>> Heil green that others have bigger outside-of-hum-radio
>> experience. Big greens fee!
>
>I have experience both in and out of amateur radio. You are not involved
>in amateur radio in any capacity.

I'd rather hear about Heil's non-Amateur experiences than Lennie's.

And I know I'd have a long time getting to them if I took time to hear his IN-Amateur experiences first...

>> Heil are hole in one.
>
>...and you are a hole in here.

Dare we say EVERYwhere...?!?! I think this is one we can pretty much grant Lennie without need for further proof. He's done a pretty good job.

>> Heil have godlike powers, allowed to strike dunder and blitzen
>> on all inferior beings.
>
>Which one of you is Dunder and which is Blitzen?

Lennie's Dunder...Brain is Blitzen.

Ironic, eh, that we started this "shift" about the same time our Lunar program wrapped up, isn't it?

It was the early 70's when Detroit and the others really started slipping. That was the era of the Gremlins, the Mavericks, Pintos and Vegas.

Sheeeesh.

And once again we have the "intellectual" engineer reverting to name
calling and blatant profanity in order to try and express himself. Weak minded
fool.

I've talked with Dave on two occassions that I recall...(Both of them on
Amateur Radio, Lennie, so you were naturally excluded).

Dave has a rich, smooth voice. Nothing like the "scratching glass" of
Otto. Never heard him bark or otherwise issue "an order". Had a signal and
audio "to die for".

He'd just adopt the tactic of hanging out at the radio club meetings
talking about "ADA", and how he used a garage door opener to make some remore
device on the Moon go "beep".

>> That has been consistent for years. Heil, like
>> yourself, just can't play well with a diverse group of people.
>
>You're certainly a diverse group of people, Leonid.

Isn't he, though.

English professor, psychiatrist, aerospace technologist, expert R/C
modeller, child development expert, aviator,
every-other-radio-service-in-the-world-EXCEPT-Amateur-Radio guru...

Sheeesh.

So where do you think he buys a hat for THAT head, Dave...?!?!

Or the BELT...?!?!

The problem here, Brain, is that there is NO allocation, other than 11 meters, where your "mentor" can run a half watt in ANY mode that will travel more than line-of-sight.

I see "Dollar General" has a nice little FRS radios for $8.00 each. Maybe wecan get one for you and one for Lennie and see if you two can "hook up"...?!?!

I am sure the "radio professional" can make it happen...

He change premise. Make always right.

> > Lennie has NO practical experience in AMATEUR Radio.
>
> Nursie astound all with obviousness...of obtuseness.

Obvious not full deck.

> Nursie godlike being also, always right, never wrong, can
> insult "inferior beings" at whim. His whim always hanging
> out in here.

He different . Not change premise same Heil. He ignore fact. He
ignore fact again and again. He yell and yell til vein pop out. He
make fact change.

> > No one disputes Lennie's "experience" in "radio". I am sure after all

>
> No have golfing book. Got balls.

Why golf book sell and sell? No good to learn from golf book. Only
about pro-golf. Have nothing for amateur golf. Amateur golf berry
different.

> Nursie nutso.

He vegemite.

> Temper fry...

He yell and yell til vein pop out. He need calm down sumpin bad
happen mad all time.

> LHA / WMD

George Bush and his followers love all of that stuff. They also appreciate
the Chineese workers living under guard in concrete block dormatories where

they work 18 hours a day for 15 to 30 cents per hour - and then often aren't paid (hey, pay for your own housing and food at 15 cents per hour). Over 400,000 Chineese workers killed by industrial accidents or from disease caused by industrial work in 2003. Some commit suicide, but, what's good for Bull Moose is good for America.

I wonder what country is going to be accused of "weapons of mass distruction" next to divert attention. You can bet it won't be North Korea. Follow the money trail.

>book. All bout pro-golf. Not help amateur golf.

Country need ham golf league. Organize, put Hq in New England.
Publish magazines, books, charge shipping. Big thing. Lobby
DC, make important noise. Yell hate, anger against pros.

Pros have balls. For sport.

Hum radio contesters sit at desk, never get up, have very wet
wastebaskets. Not physical sport. Hum radio think so,
therefore be sport.

>> Nursie nutso.
>
>Ask VA. Dey have record open for public see.

Not bother. Ask about nursie, VA have pre-recorded message,
"this individual is pre-recorded, monitored for safety."

>
>He yell and yell til vein pop out. Sumpin bad might happen him keep
>doin dat.

Like small cherry bomb go off. Shut-down switch finally thrown.

>Why we talk like marine go native?

Short-talk like CW, improve rate, make 20 WPM look like 200, reduce
bandwidth. Minimize humor. Hum radio very serious. No humor
allowed. All be to procedure, fill out forms proper, make like
big-shot radio pros of 1930.

Hum radio important have narrow, narrow bandwidth. Always was,
always so. Tradition. Venerate tradition, keep on Mt. Olympus to
please radio gods. Short-talk use minimal bandwidth. Easy to
understand by collitch edumcated nursies, ex foreign office high-
livers.

Why word "abbreviation" so long? :-)

5404. Introducing HamBlog.Com

Newsgroup: rec.radio.amateur.policy
Date: 2004-06-27 00:40:01 UTC
From: Charles Brabham <n5pvl@sbcglobal.net>
Message-ID: <BHoDc.4140$NK2.3600@newssvr23.news.prodigy.com>
Source record: 93468

HamBlog http://www.hamblog.com is a weblog host exclusively for amateur radio operators. The hosting service is free of charge.

Many hams have questions about blogging. If you are wondering what the bloggosphere is all about, there is a definition of blogging on our main page, along with a link to a very good blogging FAQ list. (Frequently Asked Questions) The information there will give you a solid footing as you step into the blogging world.

Why a "HamBlog"?

Hams have a lot of information to pass on to each other that traditional information systems such as magazine articles or speaking engagements at fests have proven to be unsuitable for. Weblogs are highly flexible and highly individualistic. It is our hope that the public weblogs at HamBlog will provide a wellspring of knowledge about Amateur Radio that would be impossible to access or distribute by traditional methods. Perhaps in some way HamBlog will expand the capabilities of our present "Elmering" setup, which many feel has suffered and diminished in recent decades.

As is the case outside of the Amateur Radio community, word gets around about outstandingly informative and useful weblogs. There is a global syndication system for weblogs that HamBlog,Com participates in, just as other blog hosts do. What is different about HamBlog is also the thing that makes it special.... It's all Hams!

If you are an Amateur Radio operator who would like to post a weblog of your activity for the benefit of your fellow Hams, where would you go?

HamBlog.Com, of course!

This kind of thing has happened in the past.
There is a name for it in psychology, but I don't remember it.
It's the same sort of group-think and greed
that lead to Gold Rush and the Dot-Com-Bust:

A few "experts" put forth an idea (the "McGuffin") that sounds like
a sure money-maker. People start whispering to their buddies,
each one trying to sound like he's just a little bit smarter
and more informed about the McGuffin than the other guy.
Before long, there is a general, though specious, knowledge about
the wonders and glories of the McGuffin and the money to be made
if one gets in on it.

Next comes our old friend, Professor Harold Hill from "The Music Man-"
in fact, a whole bunch of him. They smell a mob with money ready
to throw it at anyone who can give them a piece of the McGuffin.
Professor Hill swoops in, smiles, makes grand promises and then
treks to that great house of prostitution on the hill, Congress.
After purchasing the requisite number of congressmen, senators
and committee men, congress hands them "The Golden Condom,"
with which he/they proceed to "do business" with the mob (investors).

Pronouncements are made, great trumpets are blown, artisans hired
and systems installed. The mob gathers round the grand banquet
table, festooned with gorgeous press releases, colorful brochures
and served by handsome young MBAs in expensive suites.
Slavering in anticipation of gorging themselves on the
sweets and cakes, and on the roast suckling pig that
will be the centerpiece of their repast, the mob watches
as four tall MBAs bring forth a massive serving tray,
it's cover of burnished brass engraved with a likeness
of Reedy Kilowatt using a computer.
They place the tray in the center of the table.
The mob leans forward, eyes wide and glistening,

forks and knives in hand.
Trumpets blow a glorious fanfare.
The MBAs, in one smooth move, lift the lid to reveal...

...a turkey.
A rather small turkey.
A rather small, very over-done turkey.
A hush falls over the assembled company for about five seconds,
wherein we will wisely make our escape.
And as we hear the sudden tidal wave of pandemonium
break behind us, as some of the "investors" dive for
a tiny morsel of the turkey, others start forking
their tablemates and still others turn their knives on
the hapless MBA servers, we see Professor Hill,
bags bulging with money, his convertable freshly
slicked with wax, cruising off into the sunset.
If we listen closely,
we can hear him singing to a familiar tune:

"Seventy Six bone heads paid for my parade,
with a hundred and ten poor fools right behind...."

It's not too bad, although I wished I would have gotten a different call
when originally assigned. I might purposefully go for the vanity call of
K8KEA, just to be a pain in the ass because our club call is W8KEA. hi hi

>

> How's that, Ryan...??? Too much of the picnic-in-the-park thing?

No, just a kind of passive resistance thing. I seriously do not agree with
the person who is our field day planner and club vicepresident. I am not
the only one boycotting the club field day either.... It has been chosen
solely by him to be placed at one of the high schools out in the county (as
opposed to the city) where there is little traffic on the weekends (passing
by the school that is).

Field Day should be at least 50% PROMOTIONAL as well as 50% emergency
simulation. Since it is not an actual emergency simulation since we all
clearly know when it is going to be, AND of course get to chose where we set
up, just how does that qualify as emergency planning/communications. Yes
there is the PREPLANNING but on our fire department we dont get to know when
our next medical call or car accident or house fire is, we just respond and
deal with it as best as we can.

In a real emergency, we may be required to set up in an area less that to be
desired, such as a parking lot. Or an open field without those natural
antenna supports..... Also, we would not normally know when that emergency
would occur.....

Maybe, at least if it was changed to where we DO know the weekend it is gonna be, BUT each countie's EC/RO or emergency services director decides the location??? I still believe that the PR value of Field Day far outwieghs any other aspect of field day.

I have been contemplating some type of solar charging system, but will be looking into various costs of doing so. Since my operation will be operating at a park picnic table, with my car near by, solar panels small enough to transport but large enough to provide adequate surface charging/and usage for daytime, so that when the evening comes, I can start will full batteries would be nice. Well, I have a whole year now to work on that! :)

Can read as writing. Multi-task. No problem.

Nursie spell good? Or nursie under spell?

Nursie allatime write "amatuer" (think nursieworld home of Heath?).
Nursie write "communicaitons" and "opertator."

Nursie under spell. Whichcraft. We not know which.

> Any "benefit of the doubt" about your "professionalism" or
>philanthropy towards radio in ANY discipline is pretty much a wash...
>

> Pitiful.

"Philanthropy?" Nursie think I give money away? Nursie nuts. Is professional, do services for money. Accept money, not give. That called "professional."

Nursie wash disciplines? Is same brain-washing? Strange.

Nursie need consultation with Poirot, find out about "little grey cells." Nursie not using them proper.

Temper fry...

"Sorry, Hans, MARS >>IS<< ham radio!"

Nursie need relax, watch old re-runs on tube, see documentary on murine corpse suggested by Brian.

> Not much...but I did expect better.

All expect nursie be hostile action hero on field day. Nursie not do that, be on-line shooting blanks, yelling, cussing, making bad noises at enemies.

Nursie not get military handset for paramilitary SG-2020? No? Too bad. Nursie not play radio god as sojer in da woods?

> Perhaps from hanging around too many prepubescent children, I bet..

Tsk. Nursie allatime hate, hate, hate all enemies. Obsession. Nursie call boy scout leaders homosexual? Not good. Not nice.

Nursie not get merit badge as boy? Nursie get hum radio merit badge from gubmint, be very proud, he be all that he can be. Nursie very superior (old pale). Put down all inferior allatime. Nursie hostile action hero. Got medal box. Got documentation in wallet. VA knows all about that.

Temper fry...

Nursie new personality: Hunk Humanitarian!

Nursie wanna help all think like Hunk, be superior extra
morseman, message motor-mouth, hate all enemies, kill,
destroy them allatime.

Nursie get conference with other personality Weiner von
Brawn. Combined credentials very important, impressive,
can practice medicine with many licenses.

Only in nursieworld.

> Unlike you, I >>DO<< have the credentials to make an assessment
>and to cause intervention to occur, wether you like it or not.

Nursie new wetherman. "Film at eleven." Stay tuned.

Nursie have film over eyes. Glazed film like Krispy Kreme but
not sweet.

> Shall I make a referal?

Nursie smoke refers? Smoking not good. Nursie smoke, on fire
with hate, hate, hate allatime. Not good.

Nursie not show good PR for extra class super special morseman
hum raddio opertator.

Nursie nuts, think is real MD. Too many refers.

Temper fry...

Nursie have new personality! Weiner von Brawn.

Nursie big name aerospace, be purchasing agent at set-top box maker less than half year. Very important. Knows all about electronic engineering. Good job, Weiner!

Nursie got lots hate, angers, repeat lines often. Obsession by nursie. Nursie can't do field day, must be on-line to hate, hate, hate "enemy." Bad nursie, bad. Tsk.

Nursie not speak of BPL. BPL not aerospace where he
Dock-torr. (physics pun)

Nursie hate, hate, hate. Nursie angry. All posts must kill all
enemies. Destroy enemies. Way of hero hostile action ham.

Not good PR for ham radio.

Temper fry...

> Nice call, BTW ! ! ! !
> 73 Steve, K4YZ

Fortunately, no one else thought so. It was still around as a "vanity" call when I finally got back to the "4" district. HI

Well, three things on the predicted 10dB (under estimated?) additional noise floor when BPL gets rolling full steam:
1) Every ham will need to run the maximum power they can, since the "minimum power necessary" will have to overcome the high and ever-present BPL noise.
2) Although PSK works great with low power right now, maybe running big power with PSK will be one way to get through for those not interested in CW. Yep, high power PSK may be what most amateurs will go to.
3) We should all start working on our handles when the FCC is told to clamp down on the hams interfering with BPL transmissions. Actually, once those radios interfering with BPL are taken off the air, the power companies might want to try "wireless" transmission into homes. They still will have to keep their power line BPL sigs somewhat down so Duke Power doesn't interfere with Cinergy up in Cincinnati. I'm sure they can mitigate that sort of problem, however.

ak

I went up and worked with the Fulton County club(K8BXQ) for Field Day.

Man I think I got bit by the DX bug, worked 20 meters all the time I was operating, until about 4:30 (EDT) AM this morning(Sunday). Worked a few alaska stations, a few stations in the Virgin Islands, tried to work a Hawaii station but he was working a huge pileup. But the icing on the cake was Christian 3D2EA in Fiji, wow that amazed me, Shelby WA8FVT was on the mic for this contact, but it effected me just the same.

I am forever hooked, and now have even more incentive to upgrade come hell or high water heheh.

> >*empty*.
>
> (sheeeesh)
>
> So we can't configue an auxiliary fuel system?

I doubt it can be done in two years. Do you really think a lunar
lander that will fit in the Shuttle cargo bay and be compatible with
its systems could be designed, built, tested, integrated and ready for
launch to the Moon in less than two years? Including all the other
facilities that would be needed to support it? I don't.

They didn't start designing the LEM in 1967.

Now about the auxiliary fuel system:

It would have to be installed in the cargo bay, reducing the space and
weight available for the lander. It would have to carry enough fuel to
enable the shuttle and lander to leave earth orbit, enter lunar orbit,

leave lunar orbit and then configure for reeentry. That's a lot of
fuel and oxidizer.
>
> It will take an extra 30 years to figure out how to install the fuel tanks
> necessary to do it?

It may not be possible at all even if the entire cargo bay is used for
the tanks.

Look at the design of a Saturn V. Note how much of it is fuel tank and
how little is CSM and LEM. Note how much it weighs at launch, how much
of it goes to the moon, how much comes back from the moon and how much
is left for reentry.

Those numbers are determined by the basic physics of how much energy
it takes to escape the earth's and the moon's gravity.

The shuttle's liquid fuel engines are not radically more efficient
than those in a Saturn V. Their biggest claim to fame is that they are
more controllable and last longer.
>
> I'll bet you a nickle to a C-Note that Burt Rutan could rough out a

> two years.

You would lose.
>
> >If it could be done, NASA would have done it already.
>
> Oh?

Yes.
>
> Why?
>
Because it would be a great way to push the shuttle program. That's
what the "teacher in space" fiasco was about. Also the reason
Congresscritters have taken shuttle rides.

> Just because?

The physics of the problem is the key to all of it.
>
> They've had to fight Congress and ignorant laymen for 30 years just to
> stay in LEO.

So has every other program.

No bucks, no Buck Rogers.

> >The Shuttle has enough fuel to reach orbits of a few hundred miles but no
> >more.
> >Going to the moon is a lot more. That's why a Saturn V is so big yet the
> >LM/CSM

> >combo is so small.
>
> Again, We can't figure out a piggyback fuel tank?

Go ahead. Show me the numbers. How much does a shuttle weigh? How
small and light can a lander be made? How much fuel is needed to do
the jobs?

> We can't park "re-supply" ships along the way or in lunar orbit?

Do you know what a Lagrange point is?

The only practical point would be lunar orbit. Now, how would you get
a supply container there?

> We've already proven that on-orbit rendevous, docking and EVA >construction
> is a no-brainer.

Not a no-brainer at all. What has been shown is that it can be done.
In low earth orbit.
>
> So again...WHAT new technology do we ahve to develop to go back to the
> Moon?

- New lunar lander
- New heavy lift rockets
- New systems to get to lunar orbit and back

that's a short list.

Or we could just build more Saturn Vs.

> HARDWARE, yes...we need new machines. but so far, Jim, your "arguments"
> have not swayed me that we could do it if we wanted to...

Of course it could be done. We know that; it was done almost 40 years
ago using rockets designed with slide rules and controlled with
computers that make a pocket calculator look smart.

The question is - could it be done in two years? The answer is no.

> >>the mission drops in, and brings at
> >>least part of the lander home for re-use itself.
> >
> >Only ways such a system could work is if the Shuttle stayed in earth orbit
> >and the lunar package went from there.
>
> Why?

Basic physics. The energy required to send the whole shuttle to lunar
orbit and back again is simply too great.
>
> >And the result would be a short-term visit by a few astronauts, like the
> >Apollo missions, not a long term base.
>

> As long as you keep thinking that, then that's all we'll do.

What's your solution, Steve? How many tons of supplies and equipment
are needed to establish a permanent lunar base? How much money to
build everything needed, and to get it to the moon? How many years and
launches to do it?
>
> If you think in terms of "what can this ONE sortie accomplish", you'd be

> workers, mechanics, etc?

Not nearly so many as they hire highly trained and educated people.

It sounds to me like you are trying to justify a larger manned space
program by pitching it as a jobs program for Ph.Ds.

> >>If we pump up NASA for a new deep space or lunar program, it means that

> >But why not solve our problems directly?
>
> Sure...Why not.
>
> Let's just go ahead and drop a billion dollars into social welfare

> programs to feed and house the poor.

Who said anything about that?

I'm talking about solving problems like education, infrastructure, and
energy independence.

> Let's NOT do something to advance our technologies that will create
> entirely new classes of jobs, promote our wellness and, hopefully, ultimately
> develope technologies that might "liberate" us from poverty.

The space program of the '60s didn't liberate us from poverty. Nor did
it promote our wellness. It created some jobs and some new
technologies but at enormous cost.

> >>And WHAT problems are NOT being addressed long term BECAUSE of the >space
> >program?
> >
> >Surface transportation, for one. Energy efficiency and independence.
> >Education.
>
> Uh huh.

Yep. Haven't you seen how US education ranks against other countries
in the developed world? Or how much of our oil is imported? Or any of
a host of other things that need fixing?

Why can't the USA have the best educational systems in the world? The
best surface transportation systems? The best energy systems? Energy
independence?

This doesn't mean we shouldn't have a space program - we should. But
it has to stand on its own merits. Going into space is worth doing for
its own sake, not as a jobs program.

> >>>> A bit of government subsidising would promote yet another wave of
> >>>> technical advencement.

> Fiber optics = interruptable infrastructure.

Fiber optics = what makes the modern communications world tick.

Satellites are interruptible infrastructure too. Heck, it's easy: Just
build a high power ground jammer transmitter with a big dish (designed
for the right frequencies) and point it at the satellite you wish to
interrupt. Jam away. With good design, the jamming signal won't even
be detected on earth.

> >>>All of NASA's manned budget went into the shuttle, which is a

Why not? Do you think I'm joking? I'm not.

> If you believe that "all that money" is
> going to no good use and that it's not a benefit in your daily life today,
> well then there's just no use doing it.

I've not said that. What I have said is that the space and military
programs are not the best way to solve our problems here on earth.
Those problems need to be addressed directly. You want a better
mousetrap, study mouse behavior and
trap design.
>

So would I. But at the same time, I realize how big space is, and how
empty. And the basic physics of the problems inherent in space travel.
>
> Unfortunatley GETTING there will be neither cheap or without risk, but I
> for one think the benefits will ultimately be enormous.

How much of *your* money are you willing to spend? Because that's what
will fund it.

And consider this: President Bush made *another* speech where he
supported BPL and said it was up to NTIA to figure out how to avoid
interference. How come our president and those BPL folks don't know
that BPL is a bad idea from the get-go? Anybody with even a basic
engineering education can see the problems staring you in the face.

>
Yep - in every case I knew, both the husband and wife worked full time and
delayed having kids because of it. This was a time when a major shift in

American society happened, and it's very un-PC to talk about: We went from a society where millions of women, particularly those with small children, went from 'wanting to work' to 'having to work'.

>> Of course back in those days you could deduct *all* consumer interest
>> payments so there was a silver lining come tax time.

Economically, I agree. We will not prosper by taking in each other's washing.
Economics doesn't work that way.
>
>Lessee, when the US is busy doing whatever it is shifting it's economy
>to, and the rest of the world is *making* things, especially One Real
>Big part of the rest of the world, (namely China) guess who is gonna be
>the boss? Countries with service economies aren't the leaders, they are
>ruled by others.
>
Economically, anyway.

OTOH, the ideology of *some* socialist countries is being affected by exposure
to capitalism and Western-style development. The Soviet Union didn't fall apart
because of SDI or steely-eyed glares across the Berlin Wall. It had more to do
with rock'n'roll, blue jeans and a McDonald's in Red Square. China is slowly
going the same way. Look at Hong Kong.

Remember the student vs. tank episode in Tianamen Square? Look up how long ago
that was. I was shocked by how much time has passed.

Cheap foreign imports are a short-term coverup of real problems. Domestic
industry withers away, and good jobs with it. Then the infrastructure (trained
people as well as facilities) are lost.

Not much. The manned missions were all about catching up with, and beating, the Soviet Union.
>
>You are saying we spent those funds and that effort SOLELY to "catch up
>with the Soviets"...?!?!

Most of it. The manned missions were the bulk of the spending, and were primarily (not solely, but primarily) about catching up to the Rooskies and eventually beating them. We did.

In those years, the question posed to NASA was "can it be done?" not "can it be done for less than this much money?" NASA effectively had a blank check for manned missions.

It's an opinion, Steve. I don't think the benefits of the advances were worth
the cost.
>
>We are presently exchanging these comments via a medium that was
>developed incidental to yet other military programs.

Only part of it.
>
> The proliferation of the Internet has driven communication costs to all
>time lows. Cellular technology, based in part on techniques developed for
>secure communications for...you-know-who...have put a telephone on the hip of
>almost every American.

Only in part.

All of the basic concepts of the PC you look at (distributed computing,
networking, graphical user interface, even the mouse) were developed at Xerox

Palo Alto in the 1960s and early 1970s. Xerox was looking to the office of the future, and how computing could be integrated into the office environment. Much of what they envisioned has come to pass. None of it was powered by the space progrm or war - it was just plain old civilian capitalism and private money.

The internet would not be of any use to you or me if there weren't affordable PCs or similar hardware to let us access it. That hardware didn't come from war or space.

Let me make my position clear, Steve:

I think a manned space program is a good idea. But it must stand on its own merits and be consistently funded at a sustainable level. It should not be sold as a jobs program for Ph.Ds that will somehow solve all our Earth problems, or some sort of emergency that simply has to happen *now*.

I think we need to focus more on long term solutions to problems here on earth - and solve those problems directly.

Not many, Steve. I try to buy "Made In USA" whenever possible. Of course it's becoming less and less possible.

But what's your point, Steve? If I have a shirt made in China, how does that make it OK to have bought oil from SH's regime? China isn't Iraq.

I think the USA should focus more on building up our industrial and economic independence, and less on propping up tyrants who happen to be sell us things cheap.

> It was the early 70's when Detroit and the others really started slipping.
> That was the era of the Gremlins, the Mavericks, Pintos and Vegas.

Yep. The main reason was simple: Detroit hadn't made the necessary investment in basic R&D. They knew how to make big heavy inefficient cars but not small efficient ones.

For example, the Pinto was cobbled together from parts used in the base model Mustang of years earlier. Ford didn't have a decent domestically made 4 cylinder engine so they borrowed from their European affiliate. The transmissions were borrowed from bigger cars. Still used the ancient concept of front-engine, rear wheel drive. End result was that the first models were unnecessarily heavy, slow, and gas-hungry.

Meanwhile foreign carmakers like VW had cars with front wheel drive and transverse engines. No drive shaft. Less weight, less space, better traction, less total manufacturing cost once you get the bugs worked out. They'd already learned how to build efficient, clean small engines. Heck, when Chrysler came out with their Omni/Horizon cars (which were clones of the VW Rabbit/Golf/Scirocco) they actually bought the engines from VW for the first few years.

The probelm wasn't that Americans can't build good small cars - we can. The problem was that American car manufacturers didn't do their homework for years, then had to cram to catch up.

Recall that Chrysler almost went under, and was rescued by federal government loan guarantees.

For whatever reasons the lunar program was serving, I was inspired by it. Not by beating the Russkies - although that leant some competitive excitement - but by the sheer excitement, the adventure, and the prospect of something great and new. I wanted to GO there!

I still do. I'm the wierdo. Normal regular people now want to sit at home and watch "The Simple Life".

Better hope that change comes before they are the only game in town!

Sometimes I think that people equate capitalism with the freedoms we
enjoy. My point is tha not too far underneath their glossy "new
surface", they are philosophically quite different than us. One does not

need to believe in democracy to belive in making money.

That you disagree is one thing. No problem there. But field day is for your club, and it seems that there is an "if things aren't done my way, I'm not going to play. Not too teamlike.

And if you all seriously want to do it differently, vote the dude out!

Of course, will someone step up to the plate and run field day in his absence? Is there a clamor and a rush of people wanting to be FD Chairman?

> Field Day should be at least 50% PROMOTIONAL as well as 50% emergency

> antenna supports..... Also, we would not normally know when that emergency
> would occur.......

Sure. You may need to be operating while ill from something or be putting your life at serious risk at the time. You may be up for several days without sleep. You may be injured.

Heck, even the person you are trying to communicate with may only have a CW rig. So you can't even begin to simulate truly accurate emergency condx.

Under most real emergency circumstances, some emergency personell is going to tell you to go to a certain place, and operate a certain transciever. You won't set up a tent or put together a station or anything.

The purpose of FD is to in large prt get peopl simply *thinking* about emergency ops, and *doing* some simulated ops. Dunno where tha hyper accurate emergency scenario that I hear about came from.

> Maybe, at least if it was changed to where we DO know the weekend it is
> gonna be, BUT each countie's EC/RO or emergency services director decides
> the location??? I still believe that the PR value of Field Day far
> outwieghs any other aspect of field day.

Best way to control where the site is is to become an EC. The you can do as YOUR philosophical desires dictate. Are you willing to do that?

Related item. I was in a club years ago where I was in charge of our biggest fund raiser. Some of the club members didn't like how I was doing things (specifically, my methods required some work) But we made a LOT of money for a small club. So they led a revolt against me, supported by the club prez of refusing to help me or work for me. My only option that didn't make me look like an idiot was to resign from my position and chairmanship and the club. I was ironically the Vice president.

The result? Remember how they thought that my working demands were too much? I wanted 4 hours of work per year per club member. Well, no one wanted to work even after they got ride of the bastard - me, so they ended up hiring three people to do my job (keeping in mind, I did it for nuttin'), subbed out the most lucrative part of the job, and now make absolutely no money on a fund raiser that was bringing in a lot of money every year. They are actually in money trouble now. Smart people weren't they?

Point is, be good to the volunteers, and if you don't like what they are doing, do better.

Chris,

You are the one who is displaying ignorance. There are constant holes and security problems with not only many browsers, but operating systems as well. Apple is probably the only one with little or no viruses being written to attack it as it has a small presence. Unix (Linux) has holes. As far as browsers, Netscape, Opera, you name it, have security flaws. The reason O.E. is mentioned so much as it has a large following and is, therefore, an ideal target for worm/virus writers.

Everyone needs good antivirus software (updated *daily*) on their system as well as a good firewall (also updated). Everyone also needs a good anti-spyware running on their system - and it is also a good idea to have one that runs in background and blocks incoming spyware off the internet as you browse. I'm seeing quite a bit of blocking from Yahoo Groups (attempted incoming spyware).

Last, but most to the point of your post, everyone should be checking daily (whether automatically or manually) for updates to their operating system and browser. These are constantly brought out and if you bother to check (why don't I think you are well informed?), you will find patches coming out almost constantly for many different browsers and operating systems.

If you don't do this, you will eventually get bit regardless of what operating system you use.

73 from Rochester, NY
Jim

Yes. Opera. Foxfire. I think I just got an alert last week that Foxfire
has been found to have a security hole for which there is no known fix (as
of yet). Opera? It has holes. You can subscribe to these government
alerts and see for yourself.

BTW, we point fingers at browsers .... uh ... do you know that Real Player
has problems? Didn't think so. How about file sharing programs? Hehehe
HAR DE HAR HAR.

The list is virtually endless. Various instant messaging programs. Some
stuff that you wouldn't think could even cause a security problem.

I fixed a PC a few weeks ago. Some alleged tech "fixed" the computer.
Returned it sans anti-virus and firewall. Also didn't do updates. It got
hijacked. It took me quite a bit of effort which included removing spyware,
getting a firewall in place, anti-virus in place, and an on-line scan to
remove the last pieces of that nasty thing. I had even been locked out of
regedit! Finally, everything was working except I couldn't get the home

page back. Since I could get into regedit by this time, I simply edited the registry and it is finally working fine. The problem, in this case, wasn't with Microsoft or the users. It was a lazy tech that didn't want to do the whole job.

Best regards from Rochester, NY
Jim AA2QA

Len not in Feenix. Not in CQ.

Jimmie in old CQ?

>He's simply trying to get you riled up. Also wasting your time.

Tsk. Jimmie's precious time WASTED! Terrible.

That why Jimmie talk all fancy economics, national policy,
know everything in aerospace? In ham forum?

Jimmie rocket man? Have impulse to something specific?

Jimmie tell all about STS, rocket engine testing? In ham
forum? Tell of doings at The Cape? Michoud? Huntsvile?

>Why do you bother with someone who behaves that way?

Nursie big on ham aesepsis. He into ethnic cleansing. Got
industrial strength ethnic cleanser, busy say filth then clean
up others he call filthy names. Slobodan 2nd. He drive Yugo?

Nursie multi-lingual, can diss and cuss in Yiddish but not
speak Yiddish, German, or Hebrew. Very talented.

Not good example for "demonstrated international good will"
which FCC say hams have.

Sermon on Antenna Mount coming soon? Missed it today.
Was busy in SAG meeting discussing acting. Not hear full
text of sermon. Must atone. Need join musician union too.

Acting not enough.

Mellisa G. sends regards, also Ed A.

Three cheers for Mr. Hampton. Spear a few elitists. :) I know for a fact that *nix systems are every bit as vulnerable as Windoze systems, since my spouse does computer repairs for the US military, and almost everything they use is a *nix based system. They have problems with hackers on a regular basis, even through their substantial firewalls.

Point being, the only way you can begin to be sure you are protected is to have a good firewall and A/V, and keep them running and up to date. The only times I have EVER had problems with unauthorized ingress to my system have

been when both my firewall and A/V have been down (after a hardware failure usually)...

For someone who makes frequent assertions that OTHERS need
"mental help", you sure don't fall far from the same tree, Brain.

Unlike you and your "mentor", I >>DO<< have the credentials to
make an assessment of aborant behaviour, and Son, the above tract
DEFINES "aborant behaviour".

If you'd like, I have professional contacts in Ohio who can see
to your timely and compassionate commitment to a reputable facility.

Otherwise, you need to reassess your public behaviour before it
comes to the attention of someone who CAN have you put someplace safe
WITHOUT your consent.

My "YZ" worked for two reasons...First was that "YZ" in CW has a
nice swing to it.

Second is that one of the USMC units I belonged to had a tail
modex of "YZ". (Marine Heavy Helicopter Squadron 363). My first
choice was "YF", (HMH-462), but as it worked out, the "YZ" is better
on CW, methinks.

Classic "bell the cat" problem.
>
>> Field Day should be at least 50% PROMOTIONAL as well as 50% emergency
>> simulation.

That's your vision of it, Ryan. Others see FD very differently.

The good thing is that FD has many facets and can be done many ways. That's why
it's so popular - brings out more hams than any other domestic operating
activity.

The bad thing is that FD has many facets and can be done many ways. That's why
it can be such a source of disagreement.

>> Since it is not an actual emergency simulation since we all
>> clearly know when it is going to be, AND of course get to chose where we
>> set
>> up, just how does that qualify as emergency planning/communications.

It's fundamentally a skills and planning exercise. It's one thing to talk about
setting up a station quickly in an unprepared location, and another thing to
actually *do* it. Operating skills get practiced. Teamwork and learning to deal
with volunteers, both as a leader and as a team member.

>> Yes
>> there is the PREPLANNING but on our fire department we dont get to know
>> when

>condx.

You can't simulate all of them by any means, but FD simulates some of them.

>Under most real emergency circumstances, some emergency personell is
>going to tell you to go to a certain place, and operate a certain
>transciever. You won't set up a tent or put together a station or anything.

Maybe. Or it might go the other way - you may be asked to go to a certain
location and bring everything you need along.
>
>The purpose of FD is to in large prt get peopl simply *thinking* about
>emergency ops, and *doing* some simulated ops.

Bingo!

>> gonna be, BUT each countie's EC/RO or emergency services director decides
>> the location??? I still believe that the PR value of Field Day far
>> outwieghs any other aspect of field day.

The trick is to balance all the different aspects.

Here's a scenario for ya:

Months in advance, everyone who wants to participate is required to fill out a
form listing what equipment, time, and skills they can volunteer for FD.
Everyone is responsible for keeping their FD forms updated of changes
(equipment /schedule changes, license upgrades, etc.)

The forms are collected and the FD committee of no more than 3 people puts
together a Field Day master plan.

48-72 hours before FD, everyone who is signed up gets their "sealed orders" which detail where they are to go, what they are expected to bring with them and what they are expected to do for FD. It could be as simple as "show up at X on or before time T and operate station S" or as complex as "head the team running station S, bring a this list of equipment..."

Included could be things bringing like foul-weather gear even though the forecast is perfect. You don't have to wear it but you have to have it with you. Could also simulate equipment breakdowns and unavailability - although that sort of thing often happens anyway.

Except for the FD committee, nobody knows what they're going to be doing until shortly before FD. To more realistically simulate, some very good resources (rigs, antennas, generators, etc.) might be left completely unused while less than perfect substitutes are pressed into service.

You'd probably love a Field Day like that, Ryan. Would be a great learning experience for all. But I can guarantee you that more than half (probably more than 3/4) of the FD regulars in your club would walk away if the club tried such a plan cold turkey.

>Best way to control where the site is is to become an EC. The you can
>do as YOUR philosophical desires dictate. Are you willing to do that?

And if you are, how will you deal with the inevitable disputes that will arise? Remember, these folks are all volunteers, bringing their own equipment with them.
>

BINGO!

And suppose China does become democratized and completely embraces capitalism. Why should they consider the needs of the USA over their own? We could simply become an *economic* colony of China. We supply them with raw materials and some specialized labor/products, and become dependent on them for most manufactured goods. Wealth flows across the Pacific as it once did across the Atlantic. Why should China *economically* view the USA any differently than England did 250 years ago?

Go for it. Field Day is a blast. You might also enjoy other contests throughout the year. There are the International DX voice and CW contests (I got Iceland on the latter one year). I'm not sure of the dates though but check the ARRL website. The 10 meter contest in December nets a lot of good DX too.

Absolutely true. To me FD is mainly can you actually get a GOOD station or
stations set up at a location that has no existing facilities? Everything
else is a secondary function of FD.

As I said above, for me it's all about getting a good station setup and then verifying (through the contest portion) that it is indeed a good station. Now we do some other things too. For example, we have people assigned to do advance promotional work (publicity), people assigned to handle food, etc. But without stations, there's no FD.

[big snip]

> >Under most real emergency circumstances, some emergency personell is
> >going to tell you to go to a certain place, and operate a certain
> >transciever. You won't set up a tent or put together a station or
anything.
>

Maybe or maybe not. Depending on how much the local EC knows about hams and their abilities, he/she may just say set up stations that will cover area X. It would be more common that the EC talks to the leader of the ham group and then puts that ham in charge of communications.

> Maybe. Or it might go the other way - you may be asked to go to a certain
> location and bring everything you need along.
> >
> >The purpose of FD is to in large prt get peopl simply *thinking* about
> >emergency ops, and *doing* some simulated ops.
>
> Bingo!
>

Also to me it is to see what can you do with the resources available to you or your group. Small groups for example may not have a lot of resources. In past years, our club set up, from scratch, 3 towers of 50 feet each with beams in about two hours plus some wire antennas and ran 4A. This year, due to illness of several members and the possible poor turn out due to last year's poor band conditions, we put up one tower with beam and a couple of loops and ran 2A. It worked out very well despite the fact that some of us had our reservations about it (me for one).

>
> Here's a scenario for ya:
>

[snipped long description of scenario]

Here's another possible scenario. You are in a county with a low population perhaps you are the only ham in the county and there is no emergency coordinator. A disaster has smashed everything flat including your home and YOU and only YOU are even a possible source of communications. It will be up to you to salvage the equipment from the rubble and get it set up and on the air. Don't say this scenario can't happen because it or something similar has happened.

Point is: You can't duplicate real emergencies that ham radio would be involved in. Who would have expected the WTC to be attacked and their subsequent collapse?

As amateurs, our FD exercise (to me) is to learn what we can and cannot do as individuals and as a group.

Actually it is probably good to try something a little different each year. Next year I and the OM may choose to try a FD by ourselves NOT because we don't want to participate with the club but just to do something different and see how well we can do without the larger resources available through the club.

>land a
>> man on the moon in say...two years...if we really wanted to...?!?!
>
>Probably not. Not in two years, anyway.

I bet there is!

Like I said..."If we wanted to..."

Tomorrow, a lunar orbiter discovers what appears to be deposits of "X".
We need "X" really bad, and we know if we don't have a quonset hut sitting on
it, it's fair game. Betcha we could have a Shuttle-loadable lander in two
years.

>> So we can't configue an auxiliary fuel system?
>
>I doubt it can be done in two years. Do you really think a lunar
>lander that will fit in the Shuttle cargo bay and be compatible with

>facilities that would be needed to support it? I don't.

OK...four years. And I would not be surprised if a design isn't setting
around in a drawer for just such a project somewhare.

>They didn't start designing the LEM in 1967.
>
>Now about the auxiliary fuel system:
>
>It would have to be installed in the cargo bay, reducing the space and
>weight available for the lander. It would have to carry enough fuel to
>enable the shuttle and lander to leave earth orbit, enter lunar orbit,
>leave lunar orbit and then configure for reeentry. That's a lot of
>fuel and oxidizer.

Why?

We could use an Arianne to boost the tanks into orbit and the Shuttle
could mate with it. Or the extra tanks could be boosted into trans-lunar
eliptical orbit as an orbiting tanker.

>> It will take an extra 30 years to figure out how to install the fuel
>tanks
>> necessary to do it?
>
>It may not be possible at all even if the entire cargo bay is used for
>the tanks.

That's only if you think in terms of the dimensions of the Shuttle.
Again, there's nothing that says we can't piggyback the extra stuff to orbit.

>Look at the design of a Saturn V. Note how much of it is fuel tank and
>how little is CSM and LEM. Note how much it weighs at launch, how much
>of it goes to the moon, how much comes back from the moon and how much
>is left for reentry.

The Saturn V was designed to be a one-booster-lifts all flight.

I am not suggesting we do this all in one lift.

>Those numbers are determined by the basic physics of how much energy
>it takes to escape the earth's and the moon's gravity.

So we get it to orbit, get "the package" together on orbit, then loft it
into TLI from there.

For every "but how do we..." there are at least a dozen options...It's
just a matter of starting with one and getting the ball rolling.

>The shuttle's liquid fuel engines are not radically more efficient
>than those in a Saturn V. Their biggest claim to fame is that they are
>more controllable and last longer.

>that
>> two years.
>
>You would lose.

Oh?

>> >If it could be done, NASA would have done it already.
>>
>> Oh?
>
>Yes.

Why only NASA?

And what makes you think that NASA may not have already penciled this
mission out? You HAVE told me of reasons why you think it won't work one
certain way, Jim, but you've NOT shown me or caused me to believe it CAN'T be

done under ANY circumstances.

>> Why?
>>
>Because it would be a great way to push the shuttle program. That's
>what the "teacher in space" fiasco was about. Also the reason
>Congresscritters have taken shuttle rides.

Well right there's a darn good reason TO "push" the shuttle!

Jim, the first Boeing 747's carried under 300 people about 6K to 7K miles.
Now almost 40 years later it can carry over 500 in some configurations and fly
non-stop over 20 hours (London to Sydney...What's that...12K miles?

Other than just "not wanting to", what's holding us back?

>> Just because?
>
>The physics of the problem is the key to all of it.

I don't think physics is the problem.

We just need to start issuing "round to-it's" to the folks who make these
programs (pardon the pun) fly.

>> They've had to fight Congress and ignorant laymen for 30 years just to
>> stay in LEO.
>
>So has every other program.
>
>No bucks, no Buck Rogers.

Exactly.

And that's the ONLY thing holding us back.

And that's only from actually building the things...The engineering could
be done now in CAD with a minimum of expense.

>Go ahead. Show me the numbers. How much does a shuttle weigh? How
>small and light can a lander be made? How much fuel is needed to do
>the jobs?

The lander can be as small and as light as the mission dictates, or as big
as we think we need it to be for the mission.

No, I don't have "the numbers"...But I know we (yes, Lennie...The "Royal
We") can do it if we wanted to.

>> We can't park "re-supply" ships along the way or in lunar orbit?
>
>Do you know what a Lagrange point is?

Sure I do.

>The only practical point would be lunar orbit. Now, how would you get
>a supply container there?

The same way we got RANGER, "Lunar Orbiter", Apollo and who knows how
manyn other lunar exploration packages there.

>> We've already proven that on-orbit rendevous, docking and EVA >construction
>> is a no-brainer.
>
>Not a no-brainer at all. What has been shown is that it can be done.
>In low earth orbit.

CM/LM rendevous was done after TLI and after LM ascension in lunar orbit.
Both waaaaaaay outside Earth orbit!

>> So again...WHAT new technology do we ahve to develop to go back to the
>> Moon?
>
>- New lunar lander
>- New heavy lift rockets
>- New systems to get to lunar orbit and back
>
>that's a short list.
>
>Or we could just build more Saturn Vs.

And I still say we could CAD these things now and have them on orbit in a
relatively short time. My two years may be too optimistic, but I bet if we
said "do this" today, it wouldn't take another 10 years to do like Apollo.

>> HARDWARE, yes...we need new machines. but so far, Jim, your "arguments"
>> have not swayed me that we could do it if we wanted to...
>
>Of course it could be done. We know that; it was done almost 40 years
>ago using rockets designed with slide rules and controlled with
>computers that make a pocket calculator look smart.
>
>The question is - could it be done in two years? The answer is no.

OK...I defer to your suggestion of "not in 2 years"...

So what would be your assessment on a reasonable timeline?

>> >>the mission drops in, and brings at
>> >>least part of the lander home for re-use itself.

>>
>> As long as you keep thinking that, then that's all we'll do.
>
>What's your solution, Steve? How many tons of supplies and equipment
>are needed to establish a permanent lunar base? How much money to
>build everything needed, and to get it to the moon? How many years and
>launches to do it?

Well there's the rub. Again, "how much money" as opposed to the logistics of getting it done.

(1) Define the mission. How's this...A "permanent" manned base on the Moon with a staff of at least four.

(2) Define the human need since that's really the biggest "consumable". That part's not really hard, though, since there are reams of texts on human physiology and what it takes to support a human in terms of nuourishment, hydration, etc.

(3) Define short term and long term mission objectives. Again, Not too difficult to do since the first priority is going to be getting the base in place and getting it habitable.

My solution (idea?) is to have prefab'ed modules lofted via unmanned missions. They are remotely soft landed within small radius of the intended base site. The modules are fitted with wheels from in the package and a "tow vehicle" is landed. The units are then towed to the site, lowered to a sitting position and mated together. "Instant" base.

(Ironic that the fist colony on the Moon would be a trailer park, eh...?!?!)

>> So...NASA doesn't hire drivers, janitors, security personel, health

>> workers, mechanics, etc?
>
>Not nearly so many as they hire highly trained and educated people.
>
>It sounds to me like you are trying to justify a larger manned space
>program by pitching it as a jobs program for Ph.Ds.

No...Although I am sure there are a few Ph.D's out there who would gladly relinquish thier janitor's garb for a suit and tie again.

But if you get into ANY "aerospace" town, there are legions of businesses not DIRECTLY associated with aerospace, but very important...Groceries, gas stations, spas, markets, etc etc etc.

I am in Huntsville at least once a month. "Aerospace" is the "big business", but all those other countless places are needed to support the PEOPLE in "aerospace". (The 99% who get stuff done, and the 1% [ie:Lennie] who

go along for the ride and milk it for what they can...But they ALL make money
and spend money)

>> >>If we pump up NASA for a new deep space or lunar program, it means that

>> programs to feed and house the poor.
>
>Who said anything about that?
>
>I'm talking about solving problems like education, infrastructure, and
>energy independence.

Of course.

And how do we "solve" those problems, Jim?

With the exception of recreational technologies and the Internet, almost
every "advancement" has been in entertainment and recreation.

We've not had any "research" technologies to speak of change, and we
certainly won't without some sort of impetus to get them going.

In the mean time, we "solve" problems by throwing money at them. That's
the root reason we decry the space program..."Let's spend the money on Earth!"

Well...I never DID see where Mickey D's was on orbit yet, so where ELSE is
the money being spent...?!?!

>The space program of the '60s didn't liberate us from poverty. Nor did
>it promote our wellness. It created some jobs and some new
>technologies but at enormous cost.

Space HAS promoted our wellness, Jim! I can attest to that!

And we will NEVER be free of poverty. The Demoncrats thrive on it!

>> >>And WHAT problems are NOT being addressed long term BECAUSE of the >space
>> >program?
>> >
>> >Surface transportation, for one. Energy efficiency and independence.
>> >Education.

>>
>> Uh huh.
>
>Yep. Haven't you seen how US education ranks against other countries
>in the developed world? Or how much of our oil is imported? Or any of
>a host of other things that need fixing?

And not a single one of those has been impeded BY the space program,
Jim...If nothing else a lot of that has been IMproved...

There's hardly a single aspect of human endeavor outside of Somalia and
Ethiopia that ISN'T touched by the space program.

Space technology has helped prospect for oil, helps find safer routes for
ships at sea and has helped in the development of new processes for medication
manufacture.

Those "aluminized" ballons that are so popular now are a spin-off of the
technology to make polymerized plastics for NASA, as are the discs that make
CD's.

If you want, we can trash all of that, go back to pencil, paper and slide
rules, and "Movietone" newsreels for "audio visuals" at school...?!?!

>Why can't the USA have the best educational systems in the world? The
>best surface transportation systems? The best energy systems? Energy
>independence?

Money.

We could have done all of those things 30 or more years ago (or at least
been positioned to be there by now...) but everything was "fine" then, so why
spend the money...?!?!

Things are NOT so fine now, but not yet to disaster proportions, but that
light at the end of the tunnel is NOT salvation! It's the on-coming train!

Here's a quick one...Desalination. Plants were designed in the 60's for
SoCal that would have used solar heating to help desalt seawater for LA, SFO
and SDG.

Now the news on several internet sites is that the LA reserves are down
by 5 to 7 million acre-feet of water.

>This doesn't mean we shouldn't have a space program - we should. But
>it has to stand on its own merits. Going into space is worth doing for
>its own sake, not as a jobs program.

If we want it to "stand on it's own merits' (I assume you mean 'make a
profit') then we might as well just forget anything beyond LEO and sell NASA to
the Red Chinese. Unless they find oil on the Moon, I don't ever see space
travel as being able to produce it's own direct profit.

>> Fiber optics = interruptable infrastructure.
>

>Fiber optics = what makes the modern communications world tick.

I understand this. So do those who would like to do us harm.

>Satellites are interruptible infrastructure too. Heck, it's easy: Just
>build a high power ground jammer transmitter with a big dish (designed
>for the right frequencies) and point it at the satellite you wish to
>interrupt. Jam away. With good design, the jamming signal won't even
>be detected on earth.

Sure it will....Some idiot did it to TBN (not that they didn't NEED
jamming.....) and the guy responsible was collared in a day.

And I bet with some simple programming we can defeat jamming of our
commercial satellites...and I am willing to bet that c-note to the nickle that
the military birds are a bit more sophisticated already!

>> >>>All of NASA's manned budget went into the shuttle, which is a
>> >>>marvelous system with a 1 in 75 chance of complete mission failure.

I for one don't think the IDEA of BPL is bad. I think the technology for
it isn't up to par and warrants more research.

The recent deployments only bear that out.

Elevate this idea to ARRL. County EC selects operating locations.
Keeps secret. Makes the assignment 2 hours before test starts.

Extra points, of course.

Sure. And will the local mall allow you to run ops all night?

I'm a firm believer in a balanced approach. Our FD site is in a
stunningly beautiful field with plenty of trees and a million dollar
view. There is a picnic area about 1500 feet away, and ball fields
tennis courts and soccer fields east and west. It's a huge site,
probably bigger than a square mile. We get a fair amount of onlookers
that were out for a walk with the family or boyfriend/girlfriend. We
could possibly get more exposure by running it downtown or in the City
high school parking lot, but no thanks.

Yeah, and it's also fun. Want people to come out? let 'em have some
fun. That's why so many clubs have picnics for FD. That isn't a
realistic emergency scenario for sure!

Yaknow, those disputes are part of the training too! The frayed nerves
are part of the training, even. I note a short frayed nerve session
about 10 minutes before FD or any other big event. Player a gets a
little irritated with player B. Knowing about that allows us to smooth
it over before it gets big.

There are so many things about FD that are training us without us even
consciously thinking about them.

My point exactly, Jim.

We need to move the technology of our space program out of the 70/80's.
If we continue to set our sights on LEO, that's all we'll ever do, save for the
occassional cutsie-robot pushing sand around and drilling a whopping 6 inches
into the soil. THERE was a waste of money. They didn't accomplish anything
that on-orbit RADAR and spectral imaging couldn't accomplish.

But it looked cute on CNN.

5491. Field Day Results

Newsgroup: rec.radio.amateur.policy
Date: 2004-06-28 16:27:16 UTC
From: Da Shadow <DAS@cat.net>
Message-ID: <EFXDc.4336$z81.203@fed1read01>
Source record: 93555

Our GOTA station managed 220 QSO's for 271 points -- no biggie -- but all ops were inexperienced non HFers including several kids and "civilians"

Also our GOTA had 44 PSK31 QSO's
The rest were Phone on 40M, 20M, and 15M

We built a 32 foot vertical with four elavated radials -- worked back to the east coast on 40M and used it as a 3/4 vertical on 15M
Vertical radiator was three swimming pool poles held together with hose clamps.
20M antenna was a Cushcraft R8. 10M was zilch out here in the west

One of the main stations worked over 70 6M QSO's

Other main stations are being tallied
although I heard one CW station was at the 980 QSO point

Located at an EOC in Carlsbad Ca

Thanks to all for the advice on PSK31 FD operation and to Mike for the "No VHF at the GOTA" input

We gave our 6M antenna to a main VHF station.

I can't help but wonder if Microsoft and the others don't engineer these
things in, just so they can "come to the rescue" with a patch.

Munchausen's By Proxy Server...?!?!

(ducking ! ! !)

I am *not* changing the subject. There are a *ton* of security holes in
other software too - including Real Player and others.

If everyone changed to Linux, you can bet the virus and worm writers would
be writing most of the stuff for Unix systems.

As to CERT .... that is where I am getting my information about all of those
other "secure" systems and browsers. The fact remains that Internet
Explorer, Outlook, and Outlook Express are popular, thus the huge number of
viruses written for them - not that they are more or less secure than other
browsers. If one keeps a firewall in place, anti-virus in place,

anti-spyware in place, updates them daily, and *uses* them properly, one is as protected as one can be.

BTW, please ZBM-2. I suspect I'm dealing with someone with a very modest double-digit IQ here.

With all due regards,
Jim AA2QA

It was pleasant days and a chilly night for the Marshall County WV ARES bunch, atop the hill at Grandview Park overlooking the burg of Moundsville. I'm not sure of the final tally yet but it should be in the neighborhood of 26 to 27 k points. The CW duo was good for about 950 QSOs. We didn't manage a WAS on CW though--missed Alaska and Hawaii.

"Neonate?" That be noun, mean newborn infant. Newborn not have Internet access. Motor control for hands not yet complete, no typing ability. FCC license newborn as ham op? Not think so but maybe. Alla olde-tyme hammes think age not barrier to ham license.

Nursie want newborn have ham license? Newborn pass test? Do morse code cognition? Good...can have new category of ham as "extra out of birth canal!" Make news for ARRL web page. All cheer...hammes superior...support ARRL.

Nursie use magic, have bad spell. Nursie bring home Mavis Bacon and dictionary, learn typing, proper word use. Get some.

> Should have expected it, though...

Nursie angry, enraged. No sense humor, no wordplay cognition. All serious in hamme radio. Nursie be NCOIC, Dill Instructor hamme radio. Not kosher dill but know putzim.

Nursie try play red-dog in newsgrope, run into Big Yellow Dogs instead. Nursie little chihuahua, yip yip yip allatime [nursie not know old shaggy dog story of Big Yellow Dog?]

Nursie do mean diss and curse. Not good. Bad PR for hum radio. Nursie not able have sense of humor except make fun of others. Not good humor. Nursie no like opposite argument in discussion, wanna commit all opposition as crazy. Nursie be fruitcake. Left over from 1972 Christmas. Stale but have many certificates of ripeness. Nursie way too ripe.

> Tater died. 16 May 1999.

"Tater" common slang in southern states USA for POTATO since before nursie born.

Nursie write word OPERTATOR. Others make wordplay of gaffe, make TATER = TATOR. Nursie not understand, just stand under word play and get hit. Nursie angry. Make noise about personal tragedy. Demand others' sympathy by inference.

>> Oh, oh! And burnt microwave popcorn.
>
>> He Majorette.

>DEFINES "aborant behaviour".

Nursie be Dr. Killgore, MD and sick-iatrist. Have credentials from Nursieland Stool of Medicine?

Nursie, bring home the Mavis Bacon and dictionary. Nursie make ass-S? Try spelling "aberrant" correct.

"Tract?" This not real estate, not reality. That not system of organs like digestive tract. Nursie too hard to swallow as real. Not tract like propagandizing pamphlet. Nursie do agit-prop. Prop not turn over, his motor not run right.

> If you'd like, I have professional contacts in Ohio who can see
>to your timely and compassionate commitment to a reputable facility.

Ohio mafia on call? Ace make call to Ohio CAP wing? Have them fly "hot" mission to "drop in" on Brian?

Nursie make big threats, feel self very pro, very big. Nursie get pro kit, think it credential?

> Otherwise, you need to reassess your public behaviour before it
>comes to the attention of someone who CAN have you put someplace safe
>WITHOUT your consent.

Nursie study sick-iatry in UK? Spell with Brit English "iour?"

Nursie call out the guard every hiour, on the hiour? Good show.

Nursie go retail mail, sell good at Chirstmas. Nursie fruitcake.

Nursie make big big threats. All behave nursie rules or he commit. Nursie very powerful, have pro contacts. Nursie have paper saying he shrink...came in shrink-wrapped K-Mart box.

Nursie lose touch with reality. Vein go pop inside? Tsk.

This not ham radio talk, nursie talk tuff amateur MD talk with bad magic spelling. Nursie confused reality v. nursieland.

Stay tuned for other threads about ham radio...Dr. Weiner von Brawn speak on spaceflight while doing moonwalk. Not ham radio but von Brawn know all, tell all of Nursieland Air and Space Amateurism (NASA).

Nursie spaced out.

Hi, Shadow, and the group,

congrats to your GOTA results, worked them on PSK 31 around 4am your time. The crew on duty did a great job, though the band was not opened up fully then. I was operating the W7DXX Internet Remote Base near Boston, MA, from my home-QTH near Stuttgart in Germany, as W1/OE8SOQ.

I put about 80 QSOs in my log, about double the count from the previous year. Most of them in PSK31 and Phone.

I am informed about the intentions of your - and in my heart still my - club in Southern California to win the 5F Class, and I wish you and Charlie and all the others, that you have done it. Keep me informed.

Great idea to setup the whole thing at the Carlsbad EOC, its a nice place, easy to be reached and setup. I still remember the FD 2000 at the Sweetwater-Swimmingpool near Stan's, way in the outback of San Diego County. But it was a great impression, and never to be forgotten.

Keyboard to you, Mr. Lamont Cranston, DaShadow ;-))

>
> "WE" can.
>
> You and your mentor are the one's bantering in baby-babble.

Poor nursie imagining things again. Must have day off in nursieland and nothing to do.

"Short-talk" just style for quick communication. Like "CW" abbreviations...which, when written verbatim, look like childish almost-gibberish to anyone. Tsk. That statement offends nursie? Too bad. Is true. Been so long time.

Nursie want no age limit on ham radio license? No age limit now. Why Jimmie argue and diss on age limit suggestion of five years ago? No real reason. Nursie and Jimmie wanna do FIGHT over newsgrope suppremacy?

Nursie babble stuff on aerospace in other thread. Nursie not understand mass ratios, specific impulse, planetary system characteristics like "Lagrange Point." Nursie big on emotion, short on smarts. Nursie work in aerospace? Think all simple, big boondoggle? Nursie nuts, no knowledge or experience in spaceflight, just wanna-be ace in military-sounding civil air thing.

Nursie should TRY to listen to those with more knowledge than he. Nursie doesn't do that. Nursie overrides dumbness with EMOTION writ large. He thinks will-and-idea will conquer all problems, not understanding that emotional desires don't

mean squat to physical world.

Typical, when nursie confronted with ANY opposition, he gets
angry, yells and disses without thinking problem through. When
others make fun of yelling and sissing, nursie goes berserk.
Not normal behavior. Nursie have sick-iatry credentials? If so,
he not recognize his own aberrant behavior. Tsk.

>>Should be points for real emergency locations rather than setting up
>>at KOA.
>
> What KOA had a Field Day set-up?

Matters not. Field Day always touted as "emergency exercise"
by League. Seldom so. Most have field day in park, do CONTEST
FUN. Real emergencies no fun. Hypocrisy of League saying FD
is "emergency exercise."

Kampgrounds Of America (KOA) is a combination trailer park and
motel for those with RVs. Some have parkland adjoining, some not.
Not in midst of urban centers. City park better. Central. Easy to
get to to hold CONTEST. Field Day is really a contest thing. Admit
it, be man.

Nursie now goes into rage saying bad things of those not considering
Field Day to be patriotic thing, showing how ham radio is ready for
all emergencies! [predictable] Nursie gets offended to the max at
others not touting hum raddio as super patriotism, homeland security,
etc. Nursie get fruitcake.

>>Elevate this idea to ARRL. County EC selects operating locations.
>>Keeps secret. Makes the assignment 2 hours before test starts.
>
> Well, well...Brain manages an idea that doesn't insult anyone and
>actually has some merit.
>
> Put THIS day on the calendar!

Snarl, nursie, snarl. Nursie manages to sneer insults at others
with ideas. Good boy. Sic 'em.

Nursie have problem playing well with others. He demand all others
think like him. Not think like nursie? Bad. Do ethnic cleansing,
using scrub brush of nastygrams, mean dissing and cussing.

Nursie wanna commit all who not think like him. Nursie think
he sane. Probably not. Old fruitcake.

Not good PR for hum raddio. Nursie not learn what means
phrase "let it be."

Temper fry...

> that was the case, they should have communicated better.

Getting a site has become more difficult around here, mostly because
of development. Running generators all night requires some room. What
were once open fields are now McMansions. There's also the liability
issues.

In the '80s, radio club I belonged to did FD at what used to be a Nike
missile radar site. Off Delchester Road and West Chester Pike. Lots of
ready-made ham antenna structures and shelter. All gone now.

Good times.

> To me FD is mainly can you actually get a GOOD station or
> stations set up at a location that has no existing facilities? Everything
> else is a secondary function of FD.

Yep. What constitutes a "good" station varies all over the place.
>
> As I said above, for me it's all about getting a good station setup and then
> verifying (through the contest portion) that it is indeed a good station.
> Now we do some other things too. For example, we have people assigned to do
> advance promotional work (publicity), people assigned to handle food, etc.
> But without stations, there's no FD.

"Without stations, there's no FD." That's a keeper quote!
>

> their abilities, he/she may just say set up stations that will cover area X.
> It would be more common that the EC talks to the leader of the ham group and
> then puts that ham in charge of communications.

And it all depends what kind of comms are needed. In some cases, the
need is strictly local. In others, it may be long-distance.
>
> Also to me it is to see what can you do with the resources available to you
> or your group. Small groups for example may not have a lot of resources.
> In past years, our club set up, from scratch, 3 towers of 50 feet each with
> beams in about two hours plus some wire antennas and ran 4A. This year, due

> year's poor band conditions, we put up one tower with beam and a couple of
> loops and ran 2A. It worked out very well despite the fact that some of us
> had our reservations about it (me for one).

One thing that I've seen way too much of are the groups who try to do
too much with too little. Somebody gets a bug in their ear to do 5A,
and it doesn't matter to them that the site isn't big enough for 3A,
or that there won't be enough ops to keep 5 rigs on the air full
time. Or even most of the time.
>
> Here's another possible scenario. You are in a county with a low population
> perhaps you are the only ham in the county and there is no emergency
> coordinator. A disaster has smashed everything flat including your home and
> YOU and only YOU are even a possible source of communications. It will be
> up to you to salvage the equipment from the rubble and get it set up and on
> the air. Don't say this scenario can't happen because it or something
> similar has happened.

All sorts of variations. Maybe your area is untouched except that the
power is off and land communications out. Or maybe a critical bridge
is washed away.

Remember the San Franscisco earthquake of some years back, when that
upper roadway section of the Bay Bridge partially fell? It took a
bunch of telco cable with it. Very little long-distance capacity was
left, and most of that was needed for emergency comms. So hams handled
a lot of health-and-welfare traffic. Which doesn't sound like a big
deal unless you have a loved one there and haven't heard from them in
a few days, and the TV news shows their neighborhood on fire or the
multilevel freeway they use twice a day has collapsed....

>
> Point is: You can't duplicate real emergencies that ham radio would be
> involved in. Who would have expected the WTC to be attacked and their
> subsequent collapse?

Exactly. Or that a shuttle would burn up on reentry and scatter itself
over thousands of square miles?

> As amateurs, our FD exercise (to me) is to learn what we can and cannot do
> as individuals and as a group.

Yep. And to expand our skills.
>
> Actually it is probably good to try something a little different each year.
> Next year I and the OM may choose to try a FD by ourselves NOT because we
> don't want to participate with the club but just to do something different
> and see how well we can do without the larger resources available through
> the club.
>
Good advice. I've done big groups, medium groups, small groups and
singlehanded. All kinds of sites, too. Lots of fun. Don't think I've
missed one since 1968.

364 days till the next one...

73 de Jim, N2EY

For some reason I had trouble getting heard when responding to CQs.
Might have been
too much QRM. Was running about 50 watts into a multiband vertical.

That will make it more difficult to break through. But part of FD is to
learn how to deal with the QRM, different power settings, different
antennas, etc.

Source record: 93571

We built a 32 foot 1/4 wave vertical out of swimming pool poles -- with four 32 foot elavated radials -- it was a screamer on the 40 meter band -- SWR was 1.15 to 1 across the band. Worked the western USA from San Diego area -- no problem.

It also tuned to 15M (3/4 vertical) and swr was 2.5 to 1 which the rig tuner compensated for. Worked all across country on 15M.

He hate Dr. Soos. He no like Horton Who. He no like Whoville.
Million and million of kid in America grow up with Dr. Soos. But
noooo. He no like.

He no like The Who. Who no like Who? Who?

Him, dat who.

Wonder what he think Jimmie Who?

> Nursie not speak of BPL. BPL not aerospace where he
> Dock-torr. (physics pun)

He wan turn me in to Da Athorities! He say he make call and cause
trouble. Like make threts. He forget dey close all insane psyllums
and people hap no place cept under bridge or stinky shelter. He mean
man and he forget histerry.

Hate people.

>
> We need to move the technology of our space program out of the 70/80's.

Why?

Is science and exploration market-driven? I think not.

[Docktor Weiner von Brawn personality of nursie acting up...]

1. The subject title doesn't involve spacecraft, space travel, or
von Brawn's PhD dissertation on What To Do About NASA.

2. Von Brawn want unreliable man-rated space stuff with men
on board? Not good. Nursie not get to ride in spaceship,
only imagines himself hero astronaut.

3. Nursie count all failures of rocket flight. Begin with
Peenemunde. Von Brawn must know, was member
VfR (Verein fur Raumschfahrt)? Nursie go to White Sands,
then Cape Canaveral, see allatime boom-boom there before
Mercury. Spectacular. Reliability very hard work. Nursie
not do that work. Nursie shout orders MAKE WORK! All
pop-to when nursie shout. Nursie big noise.

4. First man on moon almost didn't make it. Neil was in
command on the Gemini that had a stuck-open 100-pound
(222 Newton) thruster made by Rocketdyne. Nursie ask
von Brawn personality what that mean. Nursie goona say
I "cut-and-paste" but no, see film copy from Gemini soon
after recovery okay, FAST roll-rates two degrees freedom.
Neil in "flying bedstead" next, lunar lander trainer. Loses
control at about 200 feet, has to punch out (simulator have
ejection seat with zero-altitude rocket motor). Was okay
but bit tongue in process. Armstrong quit NASA soon
after Apollo 11 recovery. Good idea. Stay alive.

5. Space Shuttle Main Engine (SSME) has strap-on computer
for thrust, thrust vector controls. Intense vibration, almost
impossible to believe levels next to engine. Minneapolis-
Honeywell design, make computer. All original parts now
obsolete for pin-pin replacements but very reliable computer.
Rocketdyne had to work for replacement, difficult, reliability
test very costly. Computer have same design architecture
now as 30 years ago, basic stuff. SSMEs (3 in each STS)
not cause of Challenger or Columbia fatal accidents. Nursie
and von Brawn chorus together I "cut-and-paste from web"
on that. Not so. Was working at Rocketdyne, touched SSME
on test stand at Coca site (very small for 350 Kpounds thrust),
was at test firings in blockhouse at Santa Su. (Santa Su be
Santa Susannah Field Test Laboratory of Rocketdyne)

>If we continue to set our sights on LEO, that's all we'll ever do, save for
the
>occassional cutsie-robot pushing sand around and drilling a whopping 6 inches
>into the soil. THERE was a waste of money.

Basic science "waste of money?" Why nursie say that?

Ben Franklin quote on such things, "What use is a newborn baby?"

Nurse have personality talk to Ben, ask same. Report back.

Mars NOT "LEO" (Low Earth Orbit). Nursie or some personality
fruitcake if think so. Nursie check almanac get figures for
distances.

>They didn't accomplish anything
>that on-orbit RADAR and spectral imaging couldn't accomplish.

Nursie go to Pasadena, talk to JPL team responsible. Ask
questions, get von Brawn personality to present alternate data.
Nursie think JPL receptive to suggestion? Think again.

JPL security will put nursie outside quick. Fruitcake display.

> But it looked cute on CNN.

Nursie think all space things "show biz?" Nursie more fruitcake.

Brits at Mars first, fail in landing. Unknown reason. Yanks next with bouncy balloon lander idea. Works. Both times. Look crazy but science and much testing proved concept viable. Lots of good data gathered by both robot explorers so far. Nursie not understand? TS. Nursie go learn about space, then put keyboard on safe before shooting it off in here.

How far to Mars, nursie. Wanna do QSO with Martian? Can use VERY slow morse since two-way time very long. Nursie see almanac, figure out radio wave travel time. Nursie can do math, figure path loss, needed power at Tx, needed sensitive at Rx? Long distances. 1 KW RTTY FSK with dish antenna work okay (calculated 50 years ago by George O. Smith, engineer and author of "Venus Equilateral" story series). Nursie argue with JPL still? Not good.

JPL helped do radar imaging of Venus over three decades ago from earth. Very LOW resolution return, hardly worth trouble, only proved possible. Earth to Mars distance close to that. JPL know how to do space things better than nursie.

Nursie do post-graduate science study via CNN? Not best. Too bad NASA channel programs cut back a few years ago. Channel may be "defunct" now. [favorite derisive nursie word is "defunct"] Mercury defunct. Gemini defunct. Apollo defunct. Skylab defunct. tsk. All worked. All got data. Basic data not available before. Nursie sneer and smirk at basic science data?

Maybe STS soon defunct? So be it. Nursie not help Mercury, Gemini, Apollo, Skylab, or STS (Shuttle Transport System) or any unmanned space mission. Nursie blabber on like Big Expert but not know basics. Big mouth. Defunct brain.

Nursie go to Clear Lake (suburb of Houston), take MSFC tour. Sundays best, not need guides. See museum of "defunct" vehicles, capsule, real moon rocks. Get rocks off? Nursie get in argument with NASA folks, sneer, yell at them, diss and curse them, examine Texas hospitality for visiting fruitcakes. Not good.

Nursie go argue with Ben Franklin about newborns. Have fun in nursieland with imaginations. Nursie stay out of real world.

Temper fry...

>He bwame shuttle disaster on you. He delerious.

Blame-tossing never-did-any-space-work nursie would have had
a total orgasm with early spaceflight days. So many go boom.
Nursie laff and laff at NASA folks, all dummies. Nursie feel very
smart when laffing at others. That pump up Weiner von Brawn.

Nursie know all about BPL, OFDM, technical stuff on method of
moments. Very schmardt. No sign of Comments on docket
04-37 from nursie. Nursie have depression too?

Docket 04-37 on the BPL NPRM now has 1,554 Comment on
ECFS. Many are multi-page filings (ARRL has 5 attachments,
ARINC has 3). Docket 03-104 on the BPL NOI is now at 6,108.
That's over 7500 filings on BPL alone.

Nursie and Jimmie wanna talk about space and economy, be
big gurus on What To Do. No talk about BPL. BPL gonna be
death of noise floor on HF if approved. Not matter. Nursie and
Jimmie live virtual lives on HF in here, be big shots with high
words on non-amateur subjects. Not understand. This not
private chat room for national politics, science, economics, or
space flight. Must figure that their extra class will work right on
through all QRM. Class will tell. Class dismissed.

>> Nursie got lots hate, angers, repeat lines often. Obsession by

>> hate "enemy." Bad nursie, bad. Tsk.
>
>He hate Dr. Soos. He no like Horton Who. He no like Whoville.
>Million and million of kid in America grow up with Dr. Soos. But
>noooo. He no like.

While not expecting to, I did get a chance to see the actual,
working Whoville vehicles made for the movie. Peterson Auto
Museum in L.A., just off Sunset Blvd close to La Brea. Four
floors of cars. Most interesting "Cars of the Stars" exhibit.
Three-four years ago.

Of course, not mentioning hum raddio will turn on the mean
diss and curse side, nursie and jimmie lecturing on newsgrope
subjects...while they go merrily on with politics, economics,
science, and spaceflight. :-)

>He no like The Who. Who no like Who? Who?
>
>Him, dat who.
>
>Wonder what he think Jimmie Who?

Amazing wonder that the anglophile didn't mention "Dr. Who," a
so-called Sci-Fi series from the UK. Very tongue-in-cheek in
places but not science. Just fun. Jimmie no like?

>> Nursie not speak of BPL. BPL not aerospace where he
>> Dock-torr. (physics pun)
>
>He wan turn me in to Da Athorities! He say he make call and cause

>man and he forget histerry.
>
>Hate people.

Obsessive-compulsive psychosis manifesting itself in rage and
sociopathy. [Psych 101 at El Camino for undergraduate
required engineering major credits in California of 1959] Nursie
gonna mention my wife on that, say I "cut-and-paste" from her
books. Wife only had MSci in Education then, would get MSci
in Social Work later, work for state of Illinois. Wife's old school
books destroyed by water damage while in storage in Washington
years ago. Nursie MUST diss wife if I write something. Nursie
fruitcake, all nuts with hate.

>> Nursie hate, hate, hate. Nursie angry. All posts must kill all
>> enemies. Destroy enemies. Way of hero hostile action ham.
>
>He yell and yell alla time. He have sigh Kologee problem. He
>speshally hate someone say that. Sorry.

Compulsive-obsessive psychosis syndrome known a long time.
Nursie need all kinds certificates and licenses to show proof of
that but still nutso to anybody else.

>> Not good PR for ham radio.
>>
>> Temper fry...
>
>Dip him in tempura batter. He almost done.

Don't think will work. Butter turn rancid on dipping. Bad taste.

Have bad taste of nursie in here. Not good. Ptui.

This not amateur radio subject. No problem. Only other hum
raddio talk is all about field day. Field day nice outing in park,
fun. Not emergency training if scheduled years in advance.
Real emergencies not scheduled.

>>land a
>>> man on the moon in say...two years...if we really wanted to...?!?!
>>
>>Probably not. Not in two years, anyway.
>
> I bet there is!

You'd lose the bet.

> Like I said..."If we wanted to..."

How much of your money are you willing to put up to make it happen?
>
> Tomorrow, a lunar orbiter discovers what appears to be deposits of "X".
>We need "X" really bad, and we know if we don't have a quonset hut sitting on
>it, it's fair game.

The moon has been under such observation for almost 40 years. Nothing of that sort of value has been found.

What would you say to someone who said that we must not drill for oil in any new areas because doing so *might* destroy some rare species - and we might have an unforeseen need to that rare species?

>Betcha we could have a Shuttle-loadable lander in two years.

You'd lose the bet.
>
>>> So we can't configue an auxiliary fuel system?
>>
>>I doubt it can be done in two years. Do you really think a lunar
>>lander that will fit in the Shuttle cargo bay and be compatible with
>>its systems could be designed, built, tested, integrated and ready for
>>launch to the Moon in less than two years? Including all the other
>>facilities that would be needed to support it? I don't.

>
> OK...four years.

That's a completely different game. You just doubled the available time.

>And I would not be surprised if a design isn't setting
>around in a drawer for just such a project somewhare.

That's a long way from a workable system.

>>Now about the auxiliary fuel system:
>>
>>It would have to be installed in the cargo bay, reducing the space and
>>weight available for the lander. It would have to carry enough fuel to
>>enable the shuttle and lander to leave earth orbit, enter lunar orbit,
>>leave lunar orbit and then configure for reeentry. That's a lot of
>>fuel and oxidizer.
>
> Why?

Because the orbiter and lander weigh quite a bit, that's why.
>
> We could use an Arianne to boost the tanks into orbit and the Shuttle
>could mate with it.

How much can an Ariane take to orbit?

If you're willing to contract out part of the job to the ESA, why not China?
Either way, it won't be "US" (as in "USA") going to the moon.

The Ariane would have to put the tanks into an orbit that the shuttle could
reach easily. And a docking system that would make fuel and oxidizer
connections would have to be developed to make the hookup. That's a new
technology right there.

>Or the extra tanks could be boosted into trans-lunar
>eliptical orbit as an orbiting tanker.

By what launch vehicle?

If you did have a launch vehicle capable of putting tanks into a translunar
orbit, that doesn't solve the problem of how the shuttle is supposed to get out
of earth orbit and meet them. And since the orbital period would be much
longer, the chances of not being able to catch up would be much greater.
>
>>>It will take an extra 30 years to figure out how to install the fuel
>>>tanks necessary to do it?
>>
>>It may not be possible at all even if the entire cargo bay is used for
>>the tanks.
>
> That's only if you think in terms of the dimensions of the Shuttle.
>Again, there's nothing that says we can't piggyback the extra stuff to orbit.

Then you need another launch vehicle and a new technology.

>>Look at the design of a Saturn V. Note how much of it is fuel tank and
>>how little is CSM and LEM. Note how much it weighs at launch, how much
>>of it goes to the moon, how much comes back from the moon and how much
>>is left for reentry.
>
>The Saturn V was designed to be a one-booster-lifts all flight.

Yep. Because after looking at all the alternatives, that was the best way to
go.

> I am not suggesting we do this all in one lift.

Then the problems and the cost multiply.

>>Those numbers are determined by the basic physics of how much energy
>>it takes to escape the earth's and the moon's gravity.
>
>So we get it to orbit, get "the package" together on orbit, then loft it
>into TLI from there.

Yep. But you need at least one new technology, and at least two carefully-timed
launches. Can be done but it's harder and more costly.
>
> For every "but how do we..." there are at least a dozen options...It's
>just a matter of starting with one and getting the ball rolling.

How much of your own money are you willing to lay out to make it happen?

>>> I'll bet you a nickle to a C-Note that Burt Rutan could rough out a
>>> workable method on a napkin in a Mojave restaurant and have itr working in
>>that
>>> two years.
>>
>>You would lose.
>
> Oh?

Yes.
>
>>> >If it could be done, NASA would have done it already.
>>>
>>> Oh?
>>
>>Yes.
>
> Why only NASA?

The political ramifications of a military (USAF) lunar mission would be a big
problem.
>
> And what makes you think that NASA may not have already penciled this
>mission out?

Nobody says they haven't. But that's a long way from doing it.

>You HAVE told me of reasons why you think it won't work one
>certain way, Jim, but you've NOT shown me or caused me to believe it CAN'T be
>done under ANY circumstances.

You're changing the boundary conditions, Steve. And you ignore basic physics.

>>> Why?
>>>
>>Because it would be a great way to push the shuttle program. That's
>>what the "teacher in space" fiasco was about. Also the reason
>>Congresscritters have taken shuttle rides.
>
> Well right there's a darn good reason TO "push" the shuttle!

If it was practical, they would have done it for just that reason. Which tells you it's not.
>
>Jim, the first Boeing 747's carried under 300 people about 6K to 7K
>miles.

So? They're not spacecraft.

> Now almost 40 years later it can carry over 500 in some configurations and
>fly non-stop over 20 hours (London to Sydney...What's that...12K miles?

Right - after decades of continuous development and upgrades, the range has been increased. And by eliminating features and making seats smaller, more people have been crammed aboard.

Better engines are one big reason. Those engines weren't a result of the space or military programs. They were the result of companies like GE working to sell civilian aircraft engines. If they could show enough fuel saving with a new design, the airlines would buy the new engines.

On top of all that, you don't push a new airliner to the limits of performance right away.

> Other than just "not wanting to", what's holding us back?

Money! How much of *your* money are you willing to spend on a new series of moon missions? Mars missions?
>
>>> Just because?
>>
>>The physics of the problem is the key to all of it.
>
> I don't think physics is the problem.

Then you don't understand physics as it relates to space travel.
>
>We just need to start issuing "round to-it's" to the folks who make
>these
>programs (pardon the pun) fly.

That means ...money. No bucks, no Buck Rogers. How much....
>
>>> They've had to fight Congress and ignorant laymen for 30 years just
>to
>>> stay in LEO.
>>
>>So has every other program.
>>
>>No bucks, no Buck Rogers.

>
>CM/LM rendevous was done after TLI and after LM ascension in lunar
>orbit. Both waaaaaaay outside Earth orbit!

Sure. But the initial move wasn't really a rendezvous - it was just the CSM
separating, turning around, docking and pulling the LM out.

The only really tricky rendezvous was when the LM came back up from the lunar
surface to meet the CSM.
>
>>> So again...WHAT new technology do we ahve to develop to go back to the
>>> Moon?
>>
>>- New lunar lander
>>- New heavy lift rockets
>>- New systems to get to lunar orbit and back
>>
>>that's a short list.

Add "zero g fuel tank connection system"
>>
>>Or we could just build more Saturn Vs.
>
>And I still say we could CAD these things now and have them on orbit in
>a relatively short time.

Suppose it takes one worker with a manual post hole digger 10 minutes to dig
one post hole. That does not mean ten workers with the same tools can do the
job in one minute.

There's a lot more to engineering than simply drawing plans.

>My two years may be too optimistic, but I bet if we
>said "do this" today, it wouldn't take another 10 years to do like Apollo.

Apollo took only about 8 years. With slide rules. And an enormous price tag.

>>> HARDWARE, yes...we need new machines. but so far, Jim, your
>>> "arguments"
>>> have not swayed me that we could do it if we wanted to...
>>
>>Of course it could be done. We know that; it was done almost 40 years
>>ago using rockets designed with slide rules and controlled with
>>computers that make a pocket calculator look smart.
>>
>>The question is - could it be done in two years? The answer is no.
>
> OK...I defer to your suggestion of "not in 2 years"...

That changes the whole game.

> So what would be your assessment on a reasonable timeline?

That depends on the funding.

What needs to be done is for there to be a *long term* commitment. That means a dependable, sustainable budget for the next couple of decades, dedicated to certain goals. Then the timelines are derived from the resources.

The programs of the '60s were rush jobs with essentially a blank check for funding. That sort of thing simply could not be sustained indefinitely.
>
>>> >>the mission drops in, and brings at

>base site. The modules are fitted with wheels from in the package and a "tow
>vehicle" is landed. The units are then towed to the site, lowered to a
>sitting
>position and mated together. "Instant" base.

Well, sort of.

First off, there must be a system that can get the modules there intact -
including landing them on the lunar surface. Building the ISS has been tough
enough - the trip to the moon is much more difficult.
>
> (Ironic that the fist colony on the Moon would be a trailer park,
>eh...?!?!)

Nope!

Second part: The modules must be buried in the lunar surface, or contain heavy
shielding. Lunar radiation is much worse than LEO - no lunar magnetic field.

Also need people and supplies.

>>> So...NASA doesn't hire drivers, janitors, security personel, health

>>
>>Who said anything about that?
>>
>>I'm talking about solving problems like education, infrastructure, and
>>energy independence.
>
> Of course.
>
> And how do we "solve" those problems, Jim?

Just as you described:

1) We describe the problem to be solved. Example: Energy independence. We
define what it means and what has to change.

2) We gather pertinent data. Look at how much is being imported, where it comes
from, how it is used, and how it could be reduced or replaced.

3) We set up adequately funded and properly run programs to make it happen.
Won't happen overnight but it can be done.

> With the exception of recreational technologies and the Internet, almost
>every "advancement" has been in entertainment and recreation.

Not true at all!
>
> We've not had any "research" technologies to speak of change, and we
>certainly won't without some sort of impetus to get them going.

Then create the impetus. How about tax credits for installing energy-saving hardware? We had that under Carter - and Reagan tossed it away.

How about an ongoing program to improve transit so that people have a reasonable alternative to driving everywhere? Sustainable communities where you don't have to drive everywhere.

As for technologies, note this:

- The efficiency of air-conditioning and refrigeration is now far greater than it was 20 years ago - even without old fashioned CFC refrigerants.

- More efficient lighting technologies reduce both the energy used and the resulting AC load in summertime.

- Automobile technology has advanced on so many fronts it's hard to list them all.
- Building techniques and materials have advanced - better insulation, more efficient heating, even low-flush toilets all add up.
>
> In the mean time, we "solve" problems by throwing money at them.

That's what you want to do in space....

>That's
>the root reason we decry the space program..."Let's spend the money on
>Earth!"

But we're not doing it.

> Well...I never DID see where Mickey D's was on orbit yet, so where ELSE
>is the money being spent...?!?!

What's needed is to spend the money fixing Earth's problems.

>>engineering education can see the problems staring you in the face.
>
> I for one don't think the IDEA of BPL is bad. I think the technology for
>it isn't up to par and warrants more research.

The basic idea is simply wrong. Power lines are simply not meant for RF. They are pretty good antennas, though. That's why the BPL systems need so many repeaters - the "line loss" at RF is largely from radiation!

Here's a simple analogy:

Let's say we lived (decades ago) in an area prone to heavy downpours. So along the backs of everyone's property we dig a stormwater ditch. The grading is such that when it rains, the excess water runs into the ditch and off to lower ground. The ditch is lined to prevent erosion but it's open to the air.

Then we decide to connect to a sewage system. Which means a lot of digging to put in big pipes to everyone's property. Expensive.

So somebody says "why not just use the stormwater ditch for sewage?" Technology is developed to pump the raw sewage to the ditch, and to divert it at the end of the ditch to the sewage system. The system "works" to the extent that the sewage winds up in the sewage system, and yet the stormwater doesn't. And it's arguably cheaper and faster than all those sewer pipes.

But the folks downwind have to smell it! And they complain.

That's BPL in a nutshell.

> The recent deployments only bear that out.
>
They prove the technology is no damn good. It's a spectrum polluter. It's just plain stupid.

We went through 2 radios for 20m before we finally got one that worked decently, 100W into a tribander at 70 ft? that was mounted to the bucket of a cherry picker.

Adam KB8MDF had a cool idea to build a 160m loop, and then split part of it off for 40m, last I talked to him saturday night when he left to get some sleep he and Dave had around 100 contacts on 40 and I can't recall how many on 160.

The only station we really had any problems working was the Hawaii, the rest came back pretty fast, amazingly the Fiji station came back after only one call.

When I was a small child, the local parish had bingo night, raffles and an
annual fair. People came - including non-Catholics! - and dropped some dollars
and had a good time.

Then a new monsignor showed up and put an end to all of it. Thought people
should just drop the money in the basket every week. Guess what - they didn't.

> >
> I worked you guys on CW. What were you running?

Same rig/antenna as the last two years from here on the hill--FT-1000MP
"Field and Stream", Johnson Matchbox and 200 foot skywire fed with open
wire. It seems I'm never the guy to work you on FD. N8NN was the op
you worked.

My math skills are showing in the comments above. Score should read
"2.6 to 2.7 k points".

We were one of those stations which should not have been running 5A. In
the middle of the night, we had only two stations running. We would have
been better candidates for 3A.

Members of a local Boy Scout troop visited and were given an overview of
amateur radio by the county EC. They then visited all of the stations
in operation. They spent the most time and showed the most interest at
the CW tent. The ancient mode users had the only station doing computer
logging (TR).

The old ops using the old mode were responsible for about 2000 of the points and that from a single station.

Hello, Dan

True enough, but the fact is that the problem is the screwball folks that get their jollies writing the darn things in the first place.

Yes, I.E. is a major problem - mostly because it is popular and your comparison with cars and trucks makes sense.

Meanwhile, back at the ranch, I'm having fits getting my dial-up to work properly and still have the DSL.

73 from Rochester, NY

Now thats going to extremes, but in reality, still, right now we have up to
a year to choose the sites we operate for F.D., and like I said, some places

might be less than desired.....

>
> Heck, even the person you are trying to communicate with may only have

>

Well hell, I can *think* about emergency ops all day/year long..... but it
is NOT a simulation at this point from what I have seen locally of at least
a dozen local area groups..... Its merely a "contest" but doing it from
outside instead of indoors.

Actually, there were a ton of possibilities..... Including many more
"optimum" spots than where it was.

them.

I wasn't saying that we can simulate all but I do think we should be
simulating in more realistic locations. That is provided that we can get
permission to set up there, as it is not actually during an emergency.

tried
> such a plan cold turkey.

Actually, with a little bit of fine tuning, I believe that would be even
better than my idea. My idea was that we WILL know which weekend, but the
location won't be announced till either that morning OR the night before,
and we have to adapt. And that location being decided (where possible) by
the county EC/RO. Actually in our specific case, we hold a regular net on
Thursdays, so that would be the best I would imagine......

Well, I guess I have never been a conformist, or one to be a "bump on the
log" type as I see so many are..... LOL

I just hate my suffix.... never liked it from the start, but never gotten
around to changing it either through vanity call process or simple
reassignment through the pool.

> at KOA.

Well, we can speculate as to "where" a potential emergency will happen till
the cows come home. The issue I had at hand was merely the choice of
location.... its SO buried from the general public, the PR value was not
worth a damn for our FD.

>
> > In a real emergency, we may be required to set up in an area less that
to be
> > desired, such as a parking lot. Or an open field without those natural

>

The only glitch I could see there, is obviously for counties without an EC.
Someone else would have to be qualified to choose then..... Not sure who,
but I am sure someone could figure that one out.

> Extra points, of course.

If that plan is followed, of course. :)

>sort of value has been found.

And tommorow an orbiter scanning FOR "X" shows up, Jim...

Maybe that 1/1000 chance that we see something from "just the right angle"
happens...

>> OK...four years.
>
>That's a completely different game. You just doubled the available time.

And it's still four yeas less than the "usual" development time for
aviation projects (The F22's been in the works for a decade already and is just
now about readu to start manufacture).

Again...>>IF<< we wanted to get it now "now", I think we could do it.

>The Ariane would have to put the tanks into an orbit that the shuttle could
>reach easily. And a docking system that would make fuel and oxidizer
>connections would have to be developed to make the hookup. That's a new
>technology right there.

Why?

What do we not already know about fuel line connections that we don't
already know? What other magic is there to getting a fuel from one tank into
another? The Russians were doing it for over a decade with MIR.

>>The Saturn V was designed to be a one-booster-lifts all flight.
>
>Yep. Because after looking at all the alternatives, that was the best way to

>go.

That was the best way to go THEN.

>Yep. But you need at least one new technology, and at least two
>carefully-timed
>launches. Can be done but it's harder and more costly.

We know exactly where the moon's going to be for the next 2000 years. We
can, with a handheld science calculator, do almost the same thing for earth
launches. It >>IS<< "rocket science", but one that's been thoroughly developed
and proven.

It's a wheel that doesn't require re-invention.

>The political ramifications of a military (USAF) lunar mission would be a big
>problem.

How many civilians have walked on the moon, Jim?

>> And what makes you think that NASA may not have already penciled this
>>mission out?
>

I am not ignoring any physics, Jim.

>Right - after decades of continuous development and upgrades, the range has
>been increased. And by eliminating features and making seats smaller, more
>people have been crammed aboard.

Yes, seats can be made smaller...

But the aircraft is 40% larger today than it was in 1969.

>Better engines are one big reason. Those engines weren't a result of the
>space
>or military programs. They were the result of companies like GE working to
>sell
>civilian aircraft engines. If they could show enough fuel saving with a new
>design, the airlines would buy the new engines.

Hmmmmmmm....

"...compnies like GE..."

Now..I WONDER who it was that made (or were major contractors on) the
engines that presently put the shuttle in orbit, as well as about every other

rocket or aeronautical project since the 30's...?!?!

Ya think they learned anything in the process...?!?! I certainly do.

>> And that's only from actually building the things...The engineering
>>could
>>be done now in CAD with a minimum of expense.
>
>Not true. CADD helps but you still need to build the thing.

Eventually, but not like we used to.

The F-22 and the Boeing 777 were both aircraft that were CAD'd right into
a first flying prototype.

>You're forgetting the physics again.

No. I'm not.

I know it takes a lot of fuel to get on-orbit.

I know it takes even more to get that magical 17,500+MPH to break orbit.

And I know it costs money to get them there.

As for your repeated reminders about "physics", Jim, I'll point out that
ALL of the deep space flights were NOT launched on Saturn 5's...They went up on
Atlas-Centaurs, Arrianes, ot Titan-3C's.

>> No, I don't have "the numbers"...But I know we (yes, Lennie...The
>"Royal
>>We") can do it if we wanted to.
>

Atlas was a "big one-use rocket"...?!?!

>>CM/LM rendevous was done after TLI and after LM ascension in lunar
>>orbit. Both waaaaaaay outside Earth orbit!
>
>Sure. But the initial move wasn't really a rendezvous - it was just the CSM
>separating, turning around, docking and pulling the LM out.
>
>The only really tricky rendezvous was when the LM came back up from the lunar
>surface to meet the CSM.

How tricky, Jim?

In one case (TLI) only one of the craft was under manned control. In the
case of CSM/LM rendevous, there were two craft under manned control.

Starting with Gemini-Agena up trough Shuttle-ISS, don't you think we've
gotten the technique pretty well down pat...???

>Add "zero g fuel tank connection system"

How did the Russians "refuel" MIR for oover a decade? Swap out propane
tanks at the convienience store?

>Apollo took only about 8 years. With slide rules. And an enormous price tag.

Becasue we'd never done it before. Now it's software you can download in
a couple minutes.

>> So what would be your assessment on a reasonable timeline?
>
>That depends on the funding.

Sheeeeesh.

>>>Basic physics. The energy required to send the whole shuttle to lunar
>>>orbit and back again is simply too great.
>>
>> "Too great"...?!?! Or too expensive...?!?!
>
>Too great.

Earlier in this same exchange you said too expensive, Jim.

>>Well there's the rub. Again, "how much money" as opposed to the
>>logistics of getting it done.
>
>I included the logistics.

The logisitics is the money!

>Anybody who was in their 30s when Apollo was active is now retirement age. Or
>dead.

What?

NASA didn't keep any archives? These guys "learned" all that stuff then
kept it to themselves?

>> I am in Huntsville at least once a month. "Aerospace" is the "big
>>business", but all those other countless places are needed to support the
>>PEOPLE in "aerospace". (The 99% who get stuff done, and the 1% [ie:Lennie]
>>who
>>go along for the ride and milk it for what they can...But they ALL make
>money
>>and spend money)
>
>Only because the money is imported from elsewhere.

Uh huh.

And why is that money "imported" fro "elsewhere", Jim?

>>>You're the one complaining about getting ripped off every April 15.
>
>How much of *your* money...

Of "MY" money, we just spent over $100B invading another country that was
of dubious danger to us (certainly less than the old USSR was at one time), and
will continue to spend billions on for another decade.

Now...If that $100B were allocated to a new lunar colony project...?!?!

>1) We describe the problem to be solved. Example: Energy independence. We
>define what it means and what has to change.
>
>2) We gather pertinent data. Look at how much is being imported, where it
>comes
>from, how it is used, and how it could be reduced or replaced.
>
>3) We set up adequately funded and properly run programs to make it happen.
>Won't happen overnight but it can be done.

Sure it can be done.

It COULD have been done 30+ years ago but "we" were too cheap to open our
wallets then to avoid the costs today.

Well...today is here, and now it's going to be a quantum more expensive to
do the things we need to do, but STILL haven't done.

Again...it's the wallet problem...not the space problem that keeps us from
these things.

>Then create the impetus. How about tax credits for installing energy-saving
>hardware? We had that under Carter - and Reagan tossed it away.

But wait, Jim!

Weren't you the same one decrying that certain persons get tax breaks that
you and I don't get...?!?!

Aren't those "tax credits" that encourage the Forbes 500 folks to USE those billions to keep industry going...?!?!

What we HAD under Carter were stifling inflation.

Science and industry MOVED under Reagan. Not a boast on my part...archived historical facts.

>>That's
>>the root reason we decry the space program..."Let's spend the money on
>>Earth!"
>
>But we're not doing it.

Then if we're not spending the money now with no more than we're doing in space, how could this make it any worse?

The move forward in industry and technology would be perpetuating in and of itself...

>> Well...I never DID see where Mickey D's was on orbit yet, so where ELSE
>>is the money being spent...?!?!
>
>What's needed is to spend the money fixing Earth's problems.

I've heard that same argument used to finish off Apollo.

We KO'd Apollo, yet schools are (in your estimation) no better off.

Why is that?

>> If you want, we can trash all of that, go back to pencil, paper and
>>slide rules, and "Movietone" newsreels for "audio visuals" at school...?!?!
>
>Many schools are at about that level today because the commitment is not
>there
>to fund them adequately. Heck, some schools don't have enough books!

And NASA is manhandling those school board members to the ground and stealing the money from them?

>>>Why can't the USA have the best educational systems in the world? The
>>>best surface transportation systems? The best energy systems? Energy
>>>independence?
>>
>> Money.
>
>Exactly. It gets spent on giving congresscritters joyrides and in replacing
>destroyed orbiters.

We'll spend more money trying to defeat gay marriage than what replacing Columbia and Challenger would cost.

Besides...we HAVEN'T replaced them...Challenger splashed 18 years ago now. Where's >>IT'S<< replacement...?!?!?

>>We could have done all of those things 30 or more years ago (or at least
>>been positioned to be there by now...) but everything was "fine" then, so
>why
>>spend the money...?!?!
>
>Everything wasn't fine then.

I agree.

That's why I put it in " " brackets.

It WAS a problem then. It's a worse one now.

>>Things are NOT so fine now, but not yet to disaster proportions, but
>>that
>>light at the end of the tunnel is NOT salvation! It's the on-coming train!
>
>What *are* you talking about?

Drought.

Declining oil reserves.

Internal security of our own borders.

>>Here's a quick one...Desalination. Plants were designed in the 60's
>>for
>>SoCal that would have used solar heating to help desalt seawater for LA, SFO
>>and SDG.
>
>Sounds like a good idea.
>
>>Now the news on several internet sites is that the LA reserves are down
>>by 5 to 7 million acre-feet of water.
>
>Were the plants built?

Nope.

They "cost" too much.

I wonder what they'd cost today to build? I wonder what the cost of the
decaying cities will be when those cities can no longer sustain thier
populations, and the people go elsewhere to live?

We will force the building of NEW infrastructure wherever these people
wind up, and the old cities will have to be refurbished somehow.

Ultimately I think they will have to still build the plants that should
ahve started in the 70's, and it will cost even more then.

>>Sure it will....Some idiot did it to TBN (not that they didn't NEED
>>jamming.....) and the guy responsible was collared in a day.
>
>How did they find him? Was he in the USA? Did he do it continually?

As I understand it he was found using the satellite itself to narrow him down. He was then found by the "usual" terran techniques. No, he didn't do it continually.

>>And I bet with some simple programming we can defeat jamming of our
>>commercial satellites...
>
>Not against RF overload.

That would take a system capable of putting a massive amount of RF across an extremely wide range of frequencies for a significant amount of time, Jim. Like from 400MHZ to over 5GHZ.

THAT would be expensive, and would NOT be the kind of technology you could load into a Ryder truck.

>>>When's the last time a CNG tanker or railroad tank car in the USA
>>>exploded and killed people? How many of them do you think are in use
>>>in the continental USA in the course of a year?
>>
>> Oh...NOW you add the modifier "and killed people"... ! ! !
>
>Yes. That's what the shuttle did when it blew up. Level the playing field.

Ahhhhhhhh....I see......

Well, I still see the Manned Space Program as beiong over forty years old, and only 17 Americans have died in direct space flight operations or preparations.

>> The boosters for the Shuttle exploded once, we fixed that problem.
>
>Then another problem surfaced. Is it really fixed?
>>
>> This time it was FOD to the leading edges of the wings.
>
>> Not the same...certainly not "over and over".
>
>Dead is dead. Two orbiters and their crews a total loss.

Yes. Dead is dead. They were tragedies, and we learned from them. I do not consider thier sacrifices as a "total loss".

>> They DO have a Lunar plan in place, according to TIME, Scientific
>>American
>>and several other folks commenting on the issue.
>
>So did the Russians. They never got there.

They never got there because they quit. They spent thier money elsewhere. It wasn't that they couldn't.

>> If they land ONE man on the Moon in the next decade, that will be one
>>more
>>than WE have done in the last forty years ! ! !

>
>So? The moon isn't ours.

The Gulf of Siddra isn't "ours" either yet we patrol it with a Carrier
Battle Group regularly.

The differene with the Moon is that anyone who can get there can make use
of what ever resources they find there. If it isn't us, it will be someone
else. I would rather it BE us.

>> I'd rather not!
>
>You suggested the Ariane earlier.

Lacking a US alternative, I'd spend our monies with ESA before I'd send
any more of it to the Pacific Rim..especially a PacRim controlled by the Red
Chinese.

>Why is it OK to buy consumer goods from China but not rockets?

Because I am not worried about the Red Chinese using the technology used
to make rubber duckies and t-shirts to overwhem us.

>> I'm about HOW we can do things.
>
>Me too. I'm an engineer.

Then instead of tellingus what "can't" be done because of a lack of
funding, tell us what CAN be done WITH adequate funding...And money spent
SMARTLY, not just thrown into the pot and done with as you will.....

>Other people dream of doing great things. Engineers do them.

Engieneers do them when adequately funded!

DaVinci dreamed of a great many things that have only been made practical
in the last 100 years...Because we spent the money on research to develop the
materials to let the enginees make it happen!

>>>> If you believe that "all that money" is

> Hawaii.

This year was a sort of "shakedown cruise" for us'ns. Unfamiliar
little FT-847 xcvr (MP? Not!), untried antennas, untried team, etc. so
we just sorta dabbled at it for the jollies and educations. We were on
the air for only 10-11 hours out of the 24 but still managed to garner
over S&P 400 Qs. And that included some SSB ops too by golly.

Most memorable scene:

Late Sunday morning I'm milking 40 ssb at a great rate. Handed the mic
and chair to Jim. I wish I'd taken a photo of the look on his face.
But he sallied forth and kept the rate going. Yes he did. I asked him
when it was that he last operatd phone in a contest. "Six meters AM
days
. . . "

Worked KP4, KP2 and that ZF1 9A station. That one was a bit of a jolt.
They must have had a real blast.

Figger a demonstrated 40 per hour station potential here and we gwan
go after you guys for *serious* next year so heads up Heil.

Did anybody around here work Burke?

From: VEFRH@aol.com
Subject: [amsat-bb] President's Message - Special Edition -
To: amsat-bb@AMSAT.Org, bod@AMSAT.Org, Advisors@AMSAT.Org,

1 - ECHO
It is with very great pleasure that I acknowledge the ANS news release
concerning the successful launch of ECHO and the other related satellites
from Baikonur this morning.
This achievement is due to many individuals around the world, who have
helped in the design, building, integration, testing and launching of
this satellite. Also the members of AMSATs in many countries who have
helped us by funding this "Electronic Adventure".
Without your financial support the satellite could not have been
completed, and would never have been launched, Give yourselves a "pat on
the back" for a job well done. Lee McLamb, KU4OS, Senior Editor of the
AMSAT News Service will be issuing up dated bulletins over the next few
days to advise you on the progress being made during commissioning.
At the proper time, when sufficient data has been confirmed, Past
President Bill Tynan will issue a bulletin giving the AO-XX designation,
updated Keplerian Elements will be issued as soon as they are received.
MEANWHILE please DO NOT Transmit to the satellite - commissioning must
take priority. A bulletin will be released when the satellite is open
for general use.

From Amsat-BB

> therefore, an ideal target for worm/virus writers.

The so called integration that IE and Outlook have with the operating system makes for more security flaws than other systems. All the bad guys have to have is access to the machine - Internet Explorer - then access to the OS - that integration, through either a door put in there purposely or inadvertently, and there you have it. It isn't a good system security wise. And we should demand more. The typical PC user apparently doesn't have very high expectations.

Other systems have the occasional flaw, just not so darn many of them.

BUT!

The real disservice that computer geeks have foisted on the world is the idea of "one platform, one OS".

The PC world is going to treat us to the computer equivalent of the Irish Potato Famine one of these days. We are inbred, we are monoculture. We all have the same vulnerabilities.

What we need is machines that are enough different that what takes one out does not take all the others out. We also need operators that are not so far into the woods that they can't see the trees.

> *Everyone* needs good antivirus software (updated *daily*) on their system
> as well as a good firewall (also updated).

I need that on my PC's. My Mac doesn't.

> Everyone also needs a good
> anti-spyware running on their system - and it is also a good idea to have

I need that on my PC's for sure.

> I'm seeing quite a bit of blocking from Yahoo Groups (attempted
> incoming spyware).

Oh yes. It is amazing the source of some of the spyware.

> Last, but most to the point of your post, everyone should be checking daily
> (whether automatically or manually) for updates to their operating system
> and browser. These are constantly brought out and if you bother to check
> (why don't I think you are well informed?), you will find patches coming out
> almost constantly for many different browsers and operating systems.

Here is another problem though. These updates not only protect your computer by patching security holes, they sometimes protect your computer by causing it to cease operating. (a computer that doesn't work catches no virii) On my PC, I will usually wait a few days in order to hear what problems the "updates" are causing.

> If you don't do this, you will eventually get bit regardless of what
> operating system you use.

I get bit regardless. My Norton's finds a virus here and there despite my running a proxy server, 2 firewalls, and updating the virus def's all the time.

I use both PC's and Macs extensively, so I feel I can comment knowledgeably. Using a PC is getting to be operations under siege. What the PC users consider to be normal operations is not what normal operations should be. Meanwhile, I just use my Mac and do the work I need to do without all the fuss and muss. (p.s. - you should see all the cool ham radio software that is out for OSX!)

And my final note is that you have done just what the original poster noted in his post. (albeit his more crudely) That is to blame it on the user. That doesn't flush. Don't blame the victim. We can't expect all users to be IT professionals or even highly competent.

If the manufacturers produce software that has gaping security flaws, it is their fault, not mine.

- Mike KB3EIA -

Blaming the victim again, Jim. Like blaming a sexual assault victim
because she was pretty and dressed nice.

You seem to accept the flaws as inevitable and a normal part of
operating. you would never accept a car that has as many flaws as a
typical PC OS.

Browsers and mail readers should never never ever be integrated with
OS's. Ports should be inaccessible unless you tell it to be accessible.
Address books should be encrypted (although there is a chicken and egg
thing going on in that case) The list goes on and on.

Demand competent software!

Yup. Blame the victim and shift the argument. The fact is that the Unix machines and the obscure browsers are *not* the machines that fill up my mailbox with virus laden attachments. The infected machines are running the microsoft stuff. Game set match.

And the expectation that all PC users attached to the net should have to become minor IT experts is ludicrous. blaming the victim again.

Demand competently written software!

Dwight, you and I have had our differences, but I'd hate to see Amateur Radio lose you. Hope you'll reconsider.

That said, how is the VX-7R? I am going on vacation late July and have a few friends that want to keep me company during the drive. (Their QTH's are right along my route.) So I am in the market for another handheld since my Alinco DJ-V5TH didn't seem to make the move to our new QTH intact. <hihi>

Stay safe and have a great summer.

Tom,

I think it's just become fashionable to be a self-righteous bitcher
against "Them"!

Here in reality computing has advanced light years in just a couple of
decades. My first computer (a Heath H89) had an amazing 48KB of RAM
which I upgraded all the way to 64K for the princely sum of $129, dual
boot (HDOS or CPM), a single floppy drive, no hard drive, no CD drive,
no DVC drive and an upgrade to a 12" amber screen (none of those
primitive green CRT's for me!). Processor (Zilog Z80) speed was
measured in KHz. Total price for the whole thing was just under $2,500.
Software was scarce and expensive, and web crawlers, usenet, and email
were Buck Rogers stuff. Not available to me at home, but
forward-looking companies were willing to pay $2,500/mo for 9.6KHz DDS
connectivity!

My current 'hobby' computer came with a measly 512MB of RAM which I
upgraded to 1GB for $92. It still has only one floppy drive, but 120GB
hard drive, a DVD (r/w) drive, a CD (r/w) drive. Processor speed is
2.5GHz, I have fulltime broadband connectivity to the world-wide-web for
under $50/mo, and more choices of reasonably priced software than I can
count. All thanks to those assholes at Microsoft and Intel. Ain't it
just awful?

1. Who said that?

2. Can you let us know specifically what the Linux flaws are, and how
they compare numerically and in severity with the integrated systems in
the Microsoft applications?

Their integration with the OS is one of those concepts that sound good,
but unless you have incredibly competent software writing, will be a
constant source of security problems.

> It's like looking at stats for fuel usage of passenger cars and

.... and herein lies another problem: Microsoft
won't keep any of the old updates available. I had to reload
Windows 98 (you can KEEP XP) and now I find
that almost none of the older "security upgrades" are available.
Or at least, I can't find them. Not only that, but this stupid OS
is probably telling the database I still have the upgrades
when I don't. This seriously sucks. Or I may just not know
how to go about it. That's certainly possible.

Points is points, and I knew it was a setup anyway when I saw the
camera.

> I asked him
> when it was that he last operatd phone in a contest. "Six meters AM
> days . . . "

Ya misunderstood - I meant "last time on Field Day". Which was 6 meter
AM - 1968 or thereabouts. Ol' Lafayette HA-460 and five elements at 50
feet at WA3CCP. Bacton Hill, PA - not far from where we were,
actually.

I've done 'phone SS since then.

And ya saw my SSB rate....

> Worked KP4, KP2 and that ZF1 9A station. That one was a bit of a jolt.
> They must have had a real blast.

Some serious setups out there. Saw a report of 1093 CW QSOs *just on
40 meters* by one of the 3A groups. K2/100 and a dipole IIRC. Yeah, we
worked 'em.

Didja like my QSK/CQ trick?

Been there, done that! Also had the situation where 2-3 ops in the CW
tent made more points for a 4A + GOTA station than all the rest of the
effort combined.
>
> Members of a local Boy Scout troop visited and were given an overview of

recounted how young people today react to Morse when properly
presented? I'll repost it if you like.

> The ancient mode users had the only station doing computer
> logging (TR).
>
Which ancient mode you talking about? Reginald A. Fessenden was on AM
in 1900 and later, and working 2 way transatlantic AM by 1906. AT&T
hsd SSB was on LF for the transatlantic telephone by 1927, and hams
were on HF SSB by the early 1930s.

> The old ops using the old mode were responsible for about 2000 of the
> points and that from a single station.

If all the rigs ran low power and you made 950 CW QSOs, that's 3800
points right there.

> My point exactly, Jim.

Exactly. The USA should lead the world in surface transportation
research and development, not be playing catch-up all the time.

Ford is coming out with hybrid cars that get very good gas mileage -
almost as good as my old diesel Rabbit. They're buying the technology
from Toyota.

> We need to move the technology of our space program out of the 70/80's.

That's being done every day.

> If we continue to set our sights on LEO, that's all we'll ever do, save for
> the
> occassional cutsie-robot pushing sand around and drilling a whopping 6 inches
> into the soil. THERE was a waste of money.

How can you say that? It proved out a bunch of new technologies and
gathered lots of data. And did it on schedule and within budget. If
any part of the space program leads to earth-bound advances in
technology, the Mars rover missions do.

> They didn't accomplish anything
> that on-orbit RADAR and spectral imaging couldn't accomplish.

I disagree!

Can orbital radar and imaging resolve features as small as the rovers can? Can they do the kind of analysis and sampling? Can they even do things like report surface temperature, wind, dust, etc.?

If people are ever to go to Mars, we need lots of data on what the Martian surface is really like. The Moon is easier in some ways - no wind, no dust blown by the wind, no frigid night atmosphere to cool things down.

> But it looked cute on CNN.

More than cute. It did the job.

Note also that Mars has been a graveyard of failed missions. Yes, there were spectacular successes from Mariner IV to Viking to the rovers, but also many that were simply lost. Given the failure rate, a Mars trip with people is simply too risky right now. And remember that a mission with people has to come back!

Well, there you go. For a lot of hams, Field Day is their only and/or
first training.

> > You can't simulate all of them by any means, but FD simulates some of
> >them.
>
> I wasn't saying that we can simulate all but I do think we should be
> simulating in more realistic locations. That is provided that we can get
> permission to set up there, as it is not actually during an emergency.

The question is, what constitutes a "realistic" location? Depending on
the type of emergency, all sorts of sites are realistic.

For example, look at the search for shuttle parts. People were spread
out over a large area, and needed communications over relatively short
paths but in many directions - in rural areas, mostly.

One of the biggest challenges of FD has become finding a site.
Consider what we want to do:

- Make noise all night long

- Put wires and tubing high in the air during a time of year when
thunderstorms are common

- Pound things into the ground, set up tents, cook food, etc.

- Be away from noise generators like power lines.

Plus there's the whole liability question...

> > Here's a scenario for ya:

That's in my idea too. The date would be about the only thing known in
advance outside of the planning committee.

> And that location being decided (where possible) by
> the county EC/RO. Actually in our specific case, we hold a regular net on

> Thursdays, so that would be the best I would imagine......

There ya go. And the committee could toss in all sorts of surprises: Somebody brings a nice new rig, makes 100 contacts, and then a committee person suddenly slaps a red post-it on the thing. Which means it's busted and cannot be used for X hours. Team has to improvise another rig and get back on the air ASAP.

Or maybe the announcement is made on Thursday night that *all* antennas have to be homebrewed at the site, starting no earlier than 24 hours before FD. Bring all the coax, wire, rope, connectors, line, insulators, tubing and PVC you want, but everything in the antennas has to be built from-scratch.

As I said before, if you drop something like this on most people cold-turkey they'll rebel or simply vote with their feet. But if they're brought to it gradually...

What is X that we need so bad that it would be worth mining the moon?

>(The F22's been in the works for a decade already and is just
> now about readu to start manufacture).

And it has cost how much? Each copy will cost how much? And it can't
even get to orbit...

> What do we not already know about fuel line connections that we don't
> already know? What other magic is there to getting a fuel from one tank into
> another? The Russians were doing it for over a decade with MIR.

With rocket fuel? Some of them are cryogenic, others highly corrosive.
And you're talking about a system that would be retrofit to the
shuttle.

Anything is easy for the person who doesn't have to do the work.

(like getting an Extra license out of the box, I suppose).

> That was the best way to go THEN.

Sure. And the shuttle's cost, complexity and failures have shown that
it may still be the way.

I recall that when the shuttle was being proposed and developed it was
supposed to be a "space truck" that would be *less expensive* than
one-time rockets, and would be *cost competitive* for putting unmanned
satellites up. Hasn't happened - the Ariane is the price leader for
that job.
>
> >Yep. But you need at least one new technology, and at least two

I didn't say it couldn't be done. I said it's harder and more costly.

"Engineering is doing for a shilling what any fool can do for a
pound."
>
> It's a wheel that doesn't require re-invention.

You could say that about the Saturn V approach.
>
> >The political ramifications of a military (USAF) lunar mission would be a big
> >problem.
>
> How many civilians have walked on the moon, Jim?

What did it say on the side of the LM, Steve? "NASA", not "USAF".

And remember the words on the plaque:

"We came in peace, for all mankind"

Not as warriors. Not just for the USA. "In peace, for all mankind"

> >You're changing the boundary conditions, Steve. And you ignore basic physics.
>

> Yes, seats can be made smaller...
>
> But the aircraft is 40% larger today than it was in 1969.

Sure - it's undergone 35 years of continuous development and
improvement, funded not by government but (mostly) by civilian sales
to airlines.
>
> >Better engines are one big reason. Those engines weren't a result of the

Yep.
>
> Now..I WONDER who it was that made (or were major contractors on) the
> engines that presently put the shuttle in orbit, as well as about every other
> rocket or aeronautical project since the 30's...?!?!

The shuttle doesn't have any jet engines.
>
> Ya think they learned anything in the process...?!?! I certainly do.

I think they learned how to make better jet engines by making jet
engines, not by making rocket engines.

Which do you think would be the most effective way to learn how to
make a better ham rig - by building stereos or by building ham rigs?

> >>And that's only from actually building the things...The engineering

> The F-22 and the Boeing 777 were both aircraft that were CAD'd right into
> a first flying prototype.

I know a bit about CADD, Steve. It's a great tool - I have over 21
years experience with it. But it does not do the thinking and creating
for you.

> >You're forgetting the physics again.
>
> No. I'm not.

It also takes fuel to slow them down once they get there.
>
> And I know it costs money to get them there.

How much of your own are you willing to pony up?

> As for your repeated reminders about "physics", Jim, I'll point out that
> ALL of the deep space flights were NOT launched on Saturn 5's...They went up on
> Atlas-Centaurs, Arrianes, ot Titan-3C's.

Sure - one-use rockets. And they were relatively small packages that
were not coming back. Many of them spend *years* in transit because of
the limited rocket power that launched them.
>

> >Big one-use rockets.
>
> Atlas was a "big one-use rocket"...?!?!

You ever see one reused after it boosted something to orbit?

How much can an Atlas get to LEO, anyway? How much could it get to the
moon?
>
> >Anybody who was in their 30s when Apollo was active is now retirement age. Or
> >dead.
>
> What?
>

A lot of stuff gets thrown out over time, or given away to museums.
And merely having a set of plans doesn't mean you know how to make
something, or use it.
> >
> >Only because the money is imported from elsewhere.

>
> Uh huh.
>
> And why is that money "imported" fro "elsewhere", Jim?

Taxes. The government takes money from everyone and sends it to
certain places.
>

Exactly. Yet we were told it had to be done by the same leader who
says BPL is needed and we need to go to Mars.

>Now...If that $100B were allocated to a new lunar colony
project...?!?!

How much did Apollo cost in 2004 dollars?

>
> It COULD have been done 30+ years ago but "we" were too cheap to open our
> wallets then to avoid the costs today.

BINGO!

And it wasn't just "cheap". It was a lack of long-term commitment. For
example, reducing oil consumption by 50% in 2 years would cause major
problems. But if we'd done just 2% a year starting 30 years ago....

Recall that the president who tried to make progress in the area ("the
moral equivalent of war") was not reelected.
>
> Well...today is here, and now it's going to be a quantum more expensive to

> Weren't you the same one decrying that certain persons get tax breaks that
> you and I don't get...?!?!

Not me.

And almost everyone could get those energy tax breaks - back before
Reagan "got the government off our backs" by throwing them away.

> Aren't those "tax credits" that encourage the Forbes 500 folks to USE those
> billions to keep industry going...?!?!

Not to solve basic problems.

And if they're OK for the Forbes 500, why not for me?
>
> What we HAD under Carter were stifling inflation.

Not because of anything he did.
>
> Science and industry MOVED under Reagan. Not a boast on my

> comparison with cars and trucks makes sense.

If IE was a car, you would have to put new lug nuts on it every day because the wheels would fall off otherwise. No one would put up with a vehicle built like PC's are run.

> Meanwhile, back at the ranch, I'm having fits getting my dial-up to work
> properly and still have the DSL.

Hey, I just spent around 30 hours cumulative time working on a laptop computer to get a logging program that the writers insisted would work to work on it. First it said that the .ocx files for the program weren't registered. I went in to manually register them, and one would register but the other wouldn't. So I upgraded the OS, then found out my bios was behind and needed upgraded then I got a VFAT error, and the machine wouldn't respond to anything. In the meantime I'm troubleshooting all the error messages, and being led down blind alleys and getting nowhere. Applying all kinds of updates and "security" patches. Finally, I could get the computer to boot up in safe mode, and verified that the software would run. But the video wouldn't work correctly then. Oops, the VFAT problem comes back.

So I gave up and recovered the original OS on the laptop, and used my home desktop for Field day. Now I have a video problem with the home computer that showed up probably from operating it in the great out-of-doors. My opinion of PC's is oddly poor right now

I love my G5 dual processor. My Macs have never ever given me problems like what PC users seem to take for granted as part of the territory. Upgrades, software installation, it's all good.

A big part of my job is to whip PC's into submission, so I think I can give an informed opinion between the two systems.

Couldn't build more Saturns, as the tooling is gone, as well as the
supply path.

I wouldn't say reinvented, but it would need to be re-done. I suspect
that a new moon mission would be much much different. I would guess
in-orbit assembly for the propulsion system, possibly the ship.

Well, that leaves the field wide open. Some would have us believe that
we would be better to spend the money feeding the world's poor. Of
course, then you end up with a lot of fat poor people that will continue
eating your food until you run out, then you can starve along with 'em! 8^)

But that X-15 took a monumental effort and support structure. That is
the take away I get from the SpaceShipOne effort. By comparison, the
Rutan effort is almost easy. Did you see the pix of the technicians
working on the plane? Jeans, T-Shirts and sneakers, and done in a
workshop, not a humongous facility with cleanrooms and scary nasty
chemicals sitting around. then they push it out of the "garage" hook it
up to the White Knight and off they go.

Despite the goal, I don't see the real lesson as getting to space, but
the way they are doing it.

> What benefits would a manned mission to Mars give that could not be
> had any other way?

Ahh, now we are getting close to what I think you are trying to say. As much as I enjoy the martian rovers, and as excited as I get about their discoveries, and in general, all the wonderful things that we get from the unmanned side of space exploration, if the basic purpose isn't to put people somewhere - I don't support it.

AND, as we see from Hubble, they aren't taking care of the toys we are giving them now.

The Hubble deserves to live out it's full lifetime.

At the end of it's useful life, it should be visited by a shuttle, packed up, and returned to earth to take an honored place in the Smithsonian Air and Space museum. Getting to see THAT would give me goosebumps and get me all excited. And what's more, it helps cement my support for all of this. The people at NASA should be concerned that ubergeeks like me don't support them at this time.

Once upon a time, we built the thing. It was important enough to take the risks and send it into space.

It got there - it had problems. We considered it important enough to go back into space and repair it. That was a technological triumph by the way. It turned that ugly duckling into a a beautiful swan of optical imaging.

We felt it was important enough to send servicing missions to.

Now "we" don't any more. At one time, we were going to retrieve it, but now it is too "dangerous" to even do a maintenance run on it.

My how we have changed. We aren't inspired. We demand that our explorers have the same safety factor as our automobiles. We are now pussies.

If they told me that a servicing or retrieval mission to the shuttle wouldn't take place unless I was on board, I'd be on my way down there

right now.

> And how much all of it would cost?

I think there is a psychological and social cost to *not* do it.

Ahh, but whose balance, Jim? I think that humankind badly NEEDS the sense of exploration and adventure and the frontier effect of space. My price tag of balance is a lot higher than yours, which is in turn a lot higher than a lot of other people's

If we're not their, and it isn't humans there, maybe it's just time to sit down and watch the history channel. We might see a story about us there some day.

Without refueling? Are you sure?

http://edition.cnn.com/2004/BUSINESS/06/28/singapore.airline/

10,000 miles in an Airbus A340-500 with Rolls Royce engines

billed as longest airline flight.

What airline flies London to Sydney nonstop?

73 de Jim, N2EY

Note the date...this was news to me.

The London to Sydney flight was on Quantas.

The major "kudos" ought to go to the Cedar Rapids team that put together an excellent picture of a detailed example of their BPL test system. One can see it in several Comments on docket 04-37 at the FCC ECFS.

"Kudos to ARRL?" Why? The Cedar Rapids amateur club did all the work...had the calibrated instruments for valid data collection. No computer simulations there. Actual on-air tests.

If someone wants to express gratitude to "all involved," the names and callsigns are in the several 04-37 Comments of the last week. Write them DIRECT, don't assume that "all" read this din of inequity called a newsgroup.

>He so funny sometime. Now not time.

Brian, if nursie ever had the moronic intent to do that "call," he would be in for the legal ride of his life with NO soft landing. Not on Earth, not on Mars, and he would definitely NOT be moonwalking anywhere.

Nursie went psychotic some time ago, drifting between reality and his imagination, his "logic" working more from emotion than any reasoning. He makes BRAGS of a grande scale, brags which have no validity, can't be referenced because they are fictional. When confronted with government regulations, he refuses to accept them and relies on his imaginary "definitions." He is fruitcake, hear him roar.

Nutsos surface from time to time on the Internet as they did in the BBS world. They shoot off their keyboards as they shoot off their mouths and make momentous brags, then become enraged and worse when confronted with reality and exposing their lies for what they are.

A sure sign of "nutso-ism" is the "mirror" syndrome...that of repeating what others say of them as meaning the accuser. Like the infamous Col. Jessup character in the movie, they mentally holler about "truth" and yet cannot accept the truth about themselves. They refuse to submit yet they must make others submit to their weird imaginations.

At best, all we can do is try to make some humor of the situation faced by all readers in here. That doesn't help cure the fruitcakes but it makes life a bit bearable for others.

I happen to personally like fruitcake, all the candied stuff and the nuts in that, tasty to me. I find the non-holiday human fruitcakes with candied morse nuts to be indigestible. Ptui.

Happy Fourth.

> But we had already soft-landed on Mars quite a while ago, Sir Putzy.
>And not with the "bouncy bloon lander idea".

Tsk. Nursie make mean diss and cuss again. Not nice.

"Bouncy balloon," nursie, not "bouncy bloon." Quit tawking
baby tawk. :-)

Brits first on Mars in 2003-2004 time frame.

JPL Viking Lander (Viking 1) was first surviving Mars landed
payload, launched 20 Aug 75, landed Mars on 20 Jul 76, worked
for 6 years. Viking 2 launched 9 Sep 75, landed Mars 3 Sep 76
and functioned for 3 years. Big things for USA Bicentennial.
Also very expensive.

New Mars probes cost much less, do the same job, are more
mobile, have newer instruments. Proved balloon landing
concept was feasible with minimal cost compared to rocket
retrofire "soft" landing.

Nursie do work on either JPL program? No? Tsk. Either
Viking worked longer on Mars by remote control than nursie
did as purchasing agent at set-top box company. Difference
maybe that JPL had control of Vikings. No control possible
on nursie.

> And you're STILL a putz. Now you're just a baby-babbling putz. I don't
>know which was worse.

Tsk. More mean diss and cuss. Not nice.

Nursie tell all his mighty accomplishments in aerospace? All
want to hear? Must be important to "know" all those things he
tell.

> I'd ask you to contribute something meaningful, but I know it will just
be
>so laced with your ususal "I've got to show them I AM the superior intellect"
>spitefulness that anything you DO manage to say will be lost in the hate and
>the baby-babble.

I do REAL work on some space programs. Nursie do NONE.
Nursie never at JPL, Santa Su, Michoud, Cape, Clear Lake.

Nursie read "space comics" and be space guru? Must be.
Nursie spaced out. Tsk.

Nursie not talk about BPL or PLC. Tsk. Big spectre for all HF communications in USA if Access BPL happen. Bye-bye HF ham bands for DX. Too much noise in all HF receivers from BPL. Nursie not say anything against BPL. Why that? Nursie want BPL to happen in USA? If so, nursie HATE all other hams, want to stop them from fun. Bad.

Nursie fruitcake. This not close to Christmas. Fruitcake not gift.

Temper fry...

Tell us all about Weiner's aeronautic work. Easy to do with one
word. :-)

Weiner spent time at Edwards or Nellis? Go zoom-zoom in sky?

Or just go zoom-zoom with imagination?

The Harrier has been "operational" for three decades with USMC.
Highest flight failure rates of any US military aircraft. But, it does
insure a capability of commissioned officer advancement...through
pilot attrition.

Weiner on decision board THEN? NOW? Don't think so.

>>Yep. But you need at least one new technology, and at least two
carefully-timed
>>launches. Can be done but it's harder and more costly.
>
> We know exactly where the moon's going to be for the next 2000 years. We
>can, with a handheld science calculator, do almost the same thing for earth
>launches. It >>IS<< "rocket science", but one that's been thoroughly
developed
>and proven.
>
> It's a wheel that doesn't require re-invention.

Tsk. Tsk. Tsk. Ritta mistake.

Launching requires "insertion" between existing satellites and assorted
space junk. Those satellites and junk aren't a constant for very long.
Certainly not for a decade let alone millenia.

The launch "window" referred to so glibly by TV "science commentators"
is governed by a launch trajectory missing all those other objects in
orbit. There isn't a pocket calculator built anywhere, not a palm pilot or
similar that can hold all that information and then calculate it.

>>The political ramifications of a military (USAF) lunar mission would be a big
>>problem.

>
> How many civilians have walked on the moon, Jim?

The very first one was. :-)

>>been increased. And by eliminating features and making seats smaller, more
>>people have been crammed aboard.
>
> Yes, seats can be made smaller...
>
> But the aircraft is 40% larger today than it was in 1969.

Strange. I had a flight on a Continental Airlines Boeing 707
in 1958. Had another flight on a 707 around 1992. Didn't
notice any aircraft size expansion at all. Seemed the same.
Sunnuvagun! Maybe Boeing fed them some kind of aluminum
hormone in the last dozen years? Must be... :-)

>>Better engines are one big reason. Those engines weren't a result of the
space
>>or military programs. They were the result of companies like GE working to
sell

>
> Now..I WONDER who it was that made (or were major contractors on) the
>engines that presently put the shuttle in orbit, as well as about every other
>rocket or aeronautical project since the 30's...?!?!

The F-1 engines (five) on the Apollo mission Saturn first stage were designed and built by Rocketdyne Division of North American Aviation...which, after purchase by Rockwell International, became (on legal paper) Rocketdyne Division of Rockwell International. Rocketdyne has since been purchased by Boeing Aircraft Company.

The SSME (Space Shuttle Main Engine) is used in a triad on the shuttle itself. SSME is designed and built by Rocketdyne. The SRBs (solid rocket booster) are reuseable only if they don't suffer damage on return to Earth. Rocketdyne doesn't build the SRBs which are only good for about a minute of the seven-plus long launch phase.

Sunnuvagun! How about that? :-)

> Ya think they learned anything in the process...?!?! I certainly do.

Did what? Learn something? I doubt that.

Weiner go to any rocket test firings? Michoud? Santa Su? Cape?

Not likely. Weiner gets his PhuD dissertation from cadging used copies of AW&ST. :-)

>>> And that's only from actually building the things...The engineering could
>>>be done now in CAD with a minimum of expense.
>>
>>Not true. CADD helps but you still need to build the thing.
>
> Eventually, but not like we used to.
>
> The F-22 and the Boeing 777 were both aircraft that were CAD'd right into
>a first flying prototype.

CADD = Computer Aided Design and DRAFTING.

Weiner, you have NEVER "bent tin" (worked with sheet metal) or "laid lead" (did drawings on paper) in any aerospace company. You don't know squat about "configuration management" (the big buzzword for "drawing control" of the last 3 decades).

Weiner, you have NEVER checked drawings in any aero company, let alone an electronics one, and have NEVER signed the "approved" block on any paper or mylar drawings. Don't give us this song and dance about "CAD right into the first flying prototype." The CADD is PRINCIPALLY DONE TO REDUCE THE ENORMOUS QUANTITY OF DRAWINGS that pile up to make all the parts. A sidelight is that, by using IT skills, the CADD can be configured to do "fit" tests on major assemblies for the physical assembly of a craft. Boeing proved that with the triple-seven, made it a holy thing in their documentary film for PR purposes.

The F-17 Nighthawk, then the B-2, were first modeled with CAD, just the DESIGN part, in order to get the best compromise

planform for minimal RF reflection and for minimal IR radiation.
CADD entered later when the final planform was solidified. The
man-hours cost for the CAD (just the Design part) was staggering
because it took a long time to get close to optimum.

>>You're forgetting the physics again.
>
> No. I'm not.

That may be true. One can't forget what one hasn't learned.
:-)

>>>>> We can't park "re-supply" ships along the way or in lunar orbit?

>>>>Do you know what a Lagrange point is?
>>>
>>> Sure I do.
>>
>>Then you should know that you can't "park" ships along the way to the moon.
>
> No, but you CAN park them in Earth orbit or you can park them in lunar
>orbit.

Weiner von Brawn, explain "Lagrange Point" to the studio audience.
Use only one solar system pair for simplicity, give numbers.

Explain "space parking." Synchronous orbit only synchronous in
terms of observer on object being orbited...thing in orbit is still going
around and around and around...like nursie faking knowledge.

>>>>The only practical point would be lunar orbit. Now, how would you get
>>>>a supply container there?
>>>
>>> The same way we got RANGER, "Lunar Orbiter", Apollo and who knows how
>>>manyn other lunar exploration packages there.
>>
>>Big one-use rockets.
>
> Atlas was a "big one-use rocket"...?!?!

Absolutely. Convair designed it as an ICBM lifter. A weapons
platform first...then a THROWAWAY sat launch vehicle.

Atlas had thin skin. Nursie have thin skin. Nursie = Atlas?

>>>CM/LM rendevous was done after TLI and after LM ascension in lunar
>>>orbit. Both waaaaaaay outside Earth orbit!
>>
>>Sure. But the initial move wasn't really a rendezvous - it was just the CSM
>>separating, turning around, docking and pulling the LM out.
>>
>>The only really tricky rendezvous was when the LM came back up from the lunar
>>surface to meet the CSM.

>
> How tricky, Jim?
>
> In one case (TLI) only one of the craft was under manned control. In the
>case of CSM/LM rendevous, there were two craft under manned control.
>
> Starting with Gemini-Agena up trough Shuttle-ISS, don't you think we've
>gotten the technique pretty well down pat...???

Only basic principles. That's not enough for "all." Get with it.

>>Add "zero g fuel tank connection system"
>
> How did the Russians "refuel" MIR for oover a decade? Swap out propane
>tanks at the convienience store?

Weiner tell studio audience how that was done? Weiner big guru
in space, knowitall, been there, but got no T-shirts.

>>Apollo took only about 8 years. With slide rules. And an enormous price tag.
>
> Becasue we'd never done it before. Now it's software you can download in
>a couple minutes.

Weiner tell studio audience links to software sites? MSN? Adobe?
Which ftp site, Weiner? Give details. No shooting from lip.

>>>Well there's the rub. Again, "how much money" as opposed to the
>>>logistics of getting it done.
>>
>>I included the logistics.
>
> The logisitics is the money!

Weiner show pie chart to studio audience? Explain where costs go?
Weiner only make big log as part of icy BM, not do for real...

>>Anybody who was in their 30s when Apollo was active is now retirement age. Or
>>dead.
>
> What?
>
> NASA didn't keep any archives? These guys "learned" all that stuff then
>kept it to themselves?

Technologies change with time, acquisition of new data on physics
of solar system (mascons, etc.), requirements of manufacturing,
trying to push "performance envelope."

NASA have plenty archives. Found in "configuration management"
warehouses. :-)

NASA do many boo-boos in later years. See Challenger and ice,
freezing of SRB assembly O-rings, blow-through. See Columbia

and plastic foam used to prevent ice build-up, come loose like
done before, make hole in wing. O-ring problem, main tank foam
fall-off in archives, was ignored. Tsk.

>>> I am in Huntsville at least once a month. "Aerospace" is the "big
>>>business", but all those other countless places are needed to support the
>>>PEOPLE in "aerospace". (The 99% who get stuff done, and the 1% [ie:Lennie]
>>>who go along for the ride and milk it for what they can...But they ALL make
money
>>>and spend money)
>>
>>Only because the money is imported from elsewhere.
>
> Uh huh.

Why Weiner von Brawn in Huntsville, AL? Do consulting? On
what? Why LPN go to rocket town? Put band-aids on fool
tanks? Nursie make big brag.

> It COULD have been done 30+ years ago but "we" were too cheap to open
>our wallets then to avoid the costs today.

We not have Weiner von Brawn, expert on space, to tell us how.

:-)

> What we HAD under Carter were stifling inflation.
>
> Science and industry MOVED under Reagan. Not a boast on my
>part...archived historical facts.

Archived political party SPIN! :-)

> And NASA is manhandling those school board members to the ground and
>stealing the money from them?

Only under Kennedy, Johnson, Carter, and Clinton...they make "hostile
actions" orders for murine corpse do school board fights. :-)

>
>>>>Why can't the USA have the best educational systems in the world? The
>>>>best surface transportation systems? The best energy systems? Energy

>Columbia and Challenger would cost.
>
> Besides...we HAVEN'T replaced them...Challenger splashed 18 years ago

>now. Where's >>IT'S<< replacement...?!?!?

Endeavor, first flight in 1992.

>>>We could have done all of those things 30 or more years ago (or at least
>>>been positioned to be there by now...) but everything was "fine" then, so
>>why
>>>spend the money...?!?!
>>
>>Everything wasn't fine then.
>
> I agree.
>
> That's why I put it in " " brackets.
>
> It WAS a problem then. It's a worse one now.

We not have Weiner von Brawn as guru 30 years ago. Now we
have nursieland spaced-out guru mumbling in ham radio news-
grope about spaceflight. :-)

>>>And I bet with some simple programming we can defeat jamming of our
>>>commercial satellites...
>>
>>Not against RF overload.
>
> That would take a system capable of putting a massive amount of RF across
>an extremely wide range of frequencies for a significant amount of time, Jim.
>
>Like from 400MHZ to over 5GHZ.
>
> THAT would be expensive, and would NOT be the kind of technology you
>could load into a Ryder truck.

Nursie study solar flare characteristics, effects of EMP nuke, get
back to us.

Nursie then study REAL band space of comm sats and maximum
power input values, do math for RF path loss, find narrow beam
antenna gain and power needed from terrestrial location. Nursie
have little calculator? Slide rule? [can do with slide rule]

What nursie come up with?

>>Why is it OK to buy consumer goods from China but not rockets?
>
> Because I am not worried about the Red Chinese using the technology used
>to make rubber duckies and t-shirts to overwhem us.

Nursie tawk baby tawk with "rubber duckies" gonna "overwhem" us?

:-)

Nursie get newer copies of Time, see China now have equivalent
astronauts and launch vehicles. In all the papers...

>>Other people dream of doing great things. Engineers do them.
>
> Engieneers do them when adequately funded!

"Engieneers?" They use "engien values" in math? :-)

> DaVinci dreamed of a great many things that have only been made practical
>in the last 100 years...Because we spent the money on research to develop the
>materials to let the enginees make it happen!

Now we be "enginees?" :-)

Nursie show us "practical" model of SCREW DRIVE helicopter?
DaVinci show drawing of same. We not do dat yet.

>>You're still avoiding that simple question....
>
> I am not "avoiding" anything Jim.
>
> I point blank said earlier that I didn't have all the answers.

No? Not all answers? Looks to readers like Weiner have all
answers for everything. Just have Republican in White House
and solve all problems! :-)

> I just know that we are NOT doing ANYthing to move the program forward
>today.

What "program," nursie? Magellan "nothing?"

Nursie and shrink go to JPL and discuss. Get shrink rapped
and both go in fruitcake display.

>>They prove the technology is no damn good. It's a spectrum polluter. It's
>>just plain stupid.
>
> They proved that THIS method is a spectrum polluter. Can there NEVER be
>a development that might work?

Nursie need look at latest ARRL Comment on 04-37. Open-wire electric
power line using only ONE phase as distribution line WILL BE A SPECTRUM
POLLUTER REGARDLESS OF MODULATION TYPE.

Nursie fruitcake with morse nuts. No think.

Configuration Management still has the drawings. "Tooling" is
largely jigs and fixtures which aren't on the scale of Jo-blocks.
Test data still exists.

The VAB and Mover still exist at the Cape, now modified for STS.
"We can unmodify it...we have the technology..." :-)

> I wouldn't say reinvented, but it would need to be re-done. I suspect
>that a new moon mission would be much much different. I would guess
>in-orbit assembly for the propulsion system, possibly the ship.

Not as logical as the sci-fi writers think. There's a large fuel cost
in leaving the gravity well of Earth for an orbit. Easier to make it as
a whole and have all parts go up together. For in-orbit assembly
one needs to put the assemblers in-orbit first.

Not quite. The "hats" are largely the backwards baseball caps
of the last decade.

My hat is off to you for making that comment, though... :-)

But, siriusly, the politicians cut the tail off of Apollo during Nixon's
first term. An appeasement of the Republicans was the exchange
of the last flights of Apollo for the prototype space station called
Skylab (1973-1974) and the first try at an "international" thing with
Apollo-Soyuz of 1975. Much publicity and NASA supplied
school information on Apollo-Soyuz here but the Cold War was
still on and the USSR was going their own way. [I was at MSFC
in 1974, just before Easter...the control room was modifying a
few things for the Apollo-Soyuz link even then, Skylab ending]

>> All of NASA's manned budget went into the shuttle, which is a
>> marvelous system with a 1 in 75 chance of complete mission failure.
>> The number of shuttles lost compared to the number of missions flown
>> verifies the reliability analysis.

Quite true but there was a large hiatus (at least four years) of
manned spaceflight before any serious money went to shuttle.
Any significant amounts spent were done by prospective
contractors, eventually won by Rockwell...and then for the air-
drop-only Enterprise (never space-fitted) shuttle vehicle.

>> the launch facility is in Florida?)

The weather being better? :-)

Actually, as a CONTROL center for anything that orbits people,
the MSFC would ideally be in the midwest or mountain regions
as getting the communications relay connections. Of the late
1960s, that is. That it went to Texas IS a favor to LBJ at the
time.

>> ago with the X-15.
>
> But that X-15 took a monumental effort and support structure.

Nope. Nowhere on the scale of say, Mercury. The X-15 development
was done by North American Aviation (later to be bought by Rockwell).
X-15 was and is an AIR vehicle flying out of Edwards.

>That is
>the take away I get from the SpaceShipOne effort. By comparison, the
>Rutan effort is almost easy. Did you see the pix of the technicians
>working on the plane? Jeans, T-Shirts and sneakers, and done in a
>workshop, not a humongous facility with cleanrooms and scary nasty
>chemicals sitting around. then they push it out of the "garage" hook it
>up to the White Knight and off they go.

Sorry, but that's exaggeration. The first dozen-plus flights of the X-15 were done from half a hangar at Edwards with some testing at a nearby engine test stand...lifted by a modified B-52 (which later lifted lots and lots of odd aircraft, especially the "lifting bodies" that were prototype re-entry vehicles). B-52 was handy and available, already had a big hard point for hanging air-drop things. "High-tech-space" it was NOT in appearance.

SpaceShipOne can no more reach space than the X-15 or the X-1 before it. It MUST have an airborne launch vehicle. Since few B-52s are sold surplus to prize contesters, Scaled Composites at Kern County Airport #7 designed and built their own. [that's called "Mojave" as a familiar name, is a common place for avionics flight testing by many for decades, located just north of Edwards AFB] [some call it "Mojave International" for fun but it is really a "surplus" WW2 air training base and does have long runways which look good for auto commercials on TV]

> Despite the goal, I don't see the real lesson as getting to space, but
>the way they are doing it.

"Getting into space" via either X-15 or SSOne is barely making it. Topping the stratosphere isn't in the low-earth-orbit category and way away from geosynchronous orbit.

Edwards was into many different "X" planes from during WW2 on through now, a very long time doing many different things, only a few of which were "space" related. Edwards had some rocket-assisted F-104s, too, for astronaut training in rocket-thruster control almost to space, but there isn't much PR on that. NAA made sure it got PR for the X-15 to gain visibility for future aircraft contracts, etc. All the aircraft makers were, those that are left still do. Edwards had a couple B-52s for various air-drop projects (one still remains, maybe) and there's no problem on getting crews for that support or the tracking and guidance and telemetry. But, man-rated NASA spaceflight clean-room humongous working areas it no had like you said. Open-hangar environment for ground work beginning shortly after Oh-dark-thirty, lift off ground at crack of doom and get up there before the desert air gets too bumpy from heat. Few air tests go past 10 AM. Gotta be "morning person" to sustain work at Edwards Flight Test Center. Those in the hangar are mostly civilians in common airport work clothes, few company insignia.

Scaled Composites, I think at the NE corner of "Mojave," has about the same size facilities as Edwards had during X-15 times. Since they are also in the high desert, air flights are for early morning. A half-century of time hasn't changed much and the "used airplane lot" somewhat close to SSOne's home is still there, still as large. The civilian flight test companies gather at the SW corner of "Mojave," all in "hangar environments" to do avionics systems flight testing...chaff dispensers were big customers when I was there, using the south-of-Edwards China Lake Research Center

as radar checker. Most of the upper desert is Restricted Airspace,
so it is a good area for these "X" things of unknown safety.

>> And it was done without government funding. So why do we need NASA for

>put people somewhere - I don't support it.

Okay, so do your "DXpeditions" and re-pioneer radio until 2050. :-)

The "basic purpose" of exploring the New World back in the
1400s was to GET GOLD, GET GOODIES...for the folks back
in Yurp. That included what would eventually become the USA.

GPSS is expressly designed for "putting people somewhere"
but is very unmanned. A whole two dozen obiters, in fact.
You support? They don't take people...people have to take
themselves.

>AND, as we see from Hubble, they aren't taking care of the toys we are
>giving them now.

I not see much Earth photos from Hubble space telescope. Plenty
other sats to photo Earth. First Hubble was big screw-up in main
scope optics, courtesy ground test crew. Hubble not there to "put

people anyplace."

> The Hubble deserves to live out it's full lifetime.
>
> At the end of it's useful life, it should be visited by a shuttle,
>packed up, and returned to earth to take an honored place in the
>Smithsonian Air and Space museum. Getting to see THAT would give me
>goosebumps and get me all excited. And what's more, it helps cement my
>support for all of this. The people at NASA should be concerned that
>ubergeeks like me don't support them at this time.

? Why not be "mailgeek" and support Hubble through congress-
person? Would do more. Mike support Access BPL by not saying
anything against BPL to FCC?

> Once upon a time, we built the thing. It was important enough to take
>the risks and send it into space.
>
> It got there - it had problems. We considered it important enough to go

>back into space and repair it. That was a technological triumph by the
>way. It turned that ugly duckling into a a beautiful swan of optical
>imaging.

Should have been "beautiful swan" first time around. Wasn't. Big
screw-up on ground by optical people on calibration. Tsk.

> We felt it was important enough to send servicing missions to.

DESIGNED INTO Hubble from word go on contract. Nobody knew
what effects space would have on all the different imaging systems
in Hubble...had to plan ahead. Service missions NOT any kind of
afterthought.

> Now "we" don't any more. At one time, we were going to retrieve it, but

>now it is too "dangerous" to even do a maintenance run on it.
>
> My how we have changed. We aren't inspired. We demand that our

I got taken out of context there, Fred. I was responding to the blame the victim comments. I do use Microsoft's OS's from XP to Win95 (Yet!) Mostly because it's part of my job. But I don't use the triumvirate. I only use the OS. If you are using IE and Outlook in addition to the OS, then you're asking for trouble.

Len,

The purpose was, obviously, to let eveyone know what we knew in the first
place - BPL *will* cause interference. Whatever you may think, this will
also cause interference to low band VHF users as well. I shan't get into
who uses that.

Best regards from Rochester, NY
Jim AA2QA

That's a successful GOTA station, Lamont. One of the fellows I work with cam out to operate this weekend. He is an inactive ham. He was intrigued by the PSK setup on GOTA, and I told him about setting up a station. I saw him today at the University salvage operatin here on campus. He told me he was bit by the bug, is purchasing an HF rig, and was looking at and probably going to buy one of their old laptops to use to drive it. This is the second inactive ham that I've worked back into the fold with the GOTA station. I'll probably drop a note to ARRL. The concept is sound.

It was cool enough to see our breath in the middle of the night. We got some pizza, and one of the ops brought chili to warm us up. What a combination.

We were not certain how many CW ops were coming out. Fortunately, we had a CW op for about 75 percent of the time. The final tally was pretty close between CW and Phone. The GOTA station probably tipped things in favor of the Non-voice modes. I'll know in a little bit when I add up the scores.

I had one of those pucker string moments when I had computer trouble after the event. But I got it fixed, and am doing newsgroup to relax before diving into the scores again.

I think we were around 3500 points altogether. WE were running 2a plus the GOTA.

Gotta train those new operators! We had some new ops, and they aren't as
fast as some of the OT'ers, but so what. They will be one day.

Hans .... yes you are right ...it's easy to bitch at the fellows who for what ever reason made things the way they are. If all the other systems were that good then by golly we all would have them and their inherent faults. I think it is base envy of those that brought what ever to the unwashed masses that gets some upset and made a whole bunch of money in the mean time. I was hooked when ever I saw those old "kits" back in the 60's but couldn't afford the freight. The first computer I ever had a hand in working with was a Burroghs (sp?) in 1965 which was used by the Port Vue-Liberty school district for payroll. We managed to get to use the unit with the guidence of the "special math" instructor. It used pins in sets of 3 per step in a program ...K-1-1 et al. and the problem was that the darn exponent had "floated" and had to be reset within the program lest all was lost. The Commodore units of the early 80's provided my impetus. Again look what 2K $ got you then ... and now ...all at the expense of those "greedy" risk takers.

Take care ...Tom Popovic KI3R Belle Vernon Pa

Not really Tom. My experience in computers has been that whatever gets adopted as a "standard" is related to the golden rule. He who has the gold makes the rules - and the standards.

Then you must be involved in a high-risk activity (such as downloading illegal software from questionable sources), because I have not seen any of that on my computers.

> (snip) I use both PC's and Macs extensively,

> software that is out for OSX!)

I also use both extensively and feel you're not being entirely forthright. The Mac is certainly not without its own "fuss and muss." The sheer volume of problem-related questions in the Mac newsgroups is clear testament to that. And the amount and quality of radio related software for a Windows-based computer dwarfs that available for the Macintosh (the same with most any catagory of software, or hardware).

> If the manufacturers produce software that has
> gaping security flaws, it is their fault, not mine.

Yet my experience suggests users are a large part of the problem - everything from engaging in high-risk activities to not maintaining, and even by-passing, the installed security features. I manage the IT department at a local college. I cannot even count how many computers I've seen with virus problems that also have illegally obtained software installed and security features disabled to allow the download of that software.

They're about as close to new as one can perhaps get. I bought them several months ago, but an injury shortly after that has kept me confined to the house since. Because of that, these radios have sat in a drawer, taken out only to be charged up about once every couple of months. Neither have even been outside the front door (after all this time, they'll probably get a sunburn the first time outdoors). And most of the accessories have never even been used.

> Stay safe and have a great summer.

Same for you, Bert

Sure does. I spent around the first quarter century of my career in
hamdom bumbling along with one of the lousiest callsigns ever issued.
So I put a lot of thought into what constituted a really punchy
callsign when the opportunity to came up grab one in 1977 or so. I'm
just now coming up on the breakeven point.

What a shame.

You act like this around those Scouts?

Maybe a letter to your wife about your conduct is the wrong way to go...

I am sure the BSA Council in your area would be interested in how some of thier "adult leaders" act in public.

Perhaps I can run some of your greater postings by them, including your affirmation of respect and admiration for a known antagonist and pathological liar.

Or perhaps some of your "revelations" about things you alleged to have done in the Armed Forces, but, on inspection, are blatant lies...?!?!

The package could get really thick. Maybe I'll use FedEx...

Uh huh.

Got caught with your britches down (again) and now you change the
parameters.

Too late.

> JPL Viking Lander ...(SNIP)

Another history lesson that we already knew...Thanks Lennie. Too late.

> I do REAL work on some space programs. Nursie do NONE.
> Nursie never at JPL, Santa Su, Michoud, Cape, Clear Lake.

> Nursie spaced out.

From the personal background I gleaned on you from NADC, and
"contributions" you made to "aerospace" were made on the days you didn't show
up.

That's why the name of Leonard H. Anderson does not bear any
credibility...In this forum or any other.

> Nursie fruitcake. This not close to Christmas. Fruitcake not gift.

Still waiting for your credentials in mental health.

Also now awaiting your credentials in law for making the assertion that any referal I make would put me on a "legal roller coaster". Yet another venue you venture into without any experience, Lennie.

In the meantime, we are still subjugated to your mistruths, antagonisms and overall misrepresentations of Amateur Radio...all in the name of "freedom of speech".

Luckily for you, lying is protected speech.

Steve, K4YZ

Please come and get your lid kc8ldo from rec.radio.cb. Since being identified as a source of mayhem and a troublemaker on 6 meter he has taken his circus act to the internet. We dont want him.

BPL *will* cause an HF noise level increase of at least
10 db. NTIA say so. NTIA also say we can "afford that"
because BPL be super-service broadband and W say
broadband good for country. Hooray for Republicans!

I'm not sure if the Access BPL signals WILL affect VHF
hammers. NTIA wasn't measuring there much, were they?

Let's face it, as Dan remarked, BPL is going to HAVE to
be fought "piece by piece" like the Cedar Rapids IA ham
club did. It's also nice if a major radio corporation
division is also in the city. :-) [Collins Radio]

Big article in L.A. Times business section today about
Mike Powell's plans. He not say direct but large speculation
is that Mikey will go off to big pay in corporate world. He
being dangled worm on gold-plated hook. Meanwhile, THE
Chairman of FCC is off on another rural America trip to see
"firsthand" how good BPL is in hinterlands. Whoopee.

I can only see BPL as already there and waiting. Big, Big
BIG antenna for noise-making on HF. Those who say
nothing, do nothing can kiss their S (meter) units goodbye.
You all deserve what you root for by not saying anything.
Enjoy.

>I don't know who you have in mind, but the state police use it here. That
>may be enough to kill BPL right there.

Not enough in my viewpoint. Nearly all states use the 30-50 MHz
bands for highway patrol communications as well as 150+ MHz.
Access BPL is not described (so far) as having radiated RF
byproducts above 88 MHz so the first, oldest, and now least-
used PLMRS bands at 30 to 50 MHz will be the only ones
(supposedly) affected.

Fringe-area "low band" TV receivers for channels 2 through 6
would be affected by BPL. That's a few hundred thousand plus
in the rural areas that are supposed to be the BPL broadband
treat. [Damocles' sword again, cutting two ways]

The majority of those affected by BPL would be the HF users.
The federal government has a whole potfull of fixed frequency
assignments in HF...as can be seen in the tabulations of the
NTIA Phase 1 study and in the Comments of ARINC on docket
04-37. [50,000+ or somewhere in that number region] ARINC,
true to its founding prior to WW2, is a private aviation service
running some of the HF comm facilities for long distance flights.
ARINC is very big in other areas such as acting as the
standards Hq for commercial air carriers, including the US (and,
by adoption, ICAO) radionavigation systems technical standards.

Note: Cedar Rapids, IA, has long been the home town of Collins
Radio. Collins is still busy making civil as well as military
avionics although they've been out of the amateur radio market
area for years. It shouldn't hurt a bit to have a major avionics
corporation in the area with a strong amateur radio identification
and HF commercial radio identification to help the fight against
BPL.

The USA broadcast industry is against BPL even though the major money income comes from AM and FM BC band ad sales...neither band expected to be interfered with by BPL. There's support in the industry for RF-pollution-free bandspace for US SW BC band broadcasters even though they are a drop in the program bucket for broadcasting. BPL will make about a third of all SW BC band listening impossible in the USA due to RFI.

There's all sorts of objections to BPL from the ESTABLISHED radio services, amateur included. Nonetheless, Access BPL is still going to exist...at least for a while. The Chairman of the FCC loves it (politically, certainly not for technical or legal reasons) and the Acting Secretary of the NTIA politically loves it because the USA President (for now) loves it. Both have made public statements to that regard.

Oddly enough, despite the urban myth of some objecting to BPL, the FCC does NOT have any power to stop Access BPL!

All the FCC can do is put limits on the incidental RF radiation from a BPL system, then enforce it. The FCC already does that with other communications service providers (cable TV in main but also telephone cable and incidental RF radiation from electric power lines). The enforcement is going to be a total bitch of a job for BPL. The FCC is way, way down on facilities to test and measure BPL installations and is going to have to really pork up its budget to come close to good measurements in urban areas especially. It will be a HUGE task.

There's no good signs evident that the FCC is coming even close to realizing the gargantuan task of monitoring BPL of the future. Mikey Powell and company have been sold on BPL "for the masses" and that's that...a big mass.

The only perceivable way to fight BPL is now after-the-fact, like the Cedar Rapids group did, apparently successfully. But, that takes a concerted group effort in each amateur radio locality. ARRL can't be dependent as the "big gun" to fight BPL. They aren't staffed or budgeted to oversee all the possible BPL installation testing in the USA. The League's budget would have to quadruple or quintuple to approach being able to do that...and still not be enough.

Individual industry and local government (state on down) groups haven't shown they have enough clout to make a difference in the Commission's enthusiasm for BPL. Pandora's Box has already been opened. Lots of such Boxes in all of the 50 states. It's going to be one helluva big task to close them.

Say goodbye to low-level HF signals if BPL comes to your QTH, at least for a while. Remember which administration brought out the spectre of Access BPL to this nation while you and everyone

else are at it.
